Chapter 4

Data Structure Index

4.1 Data Structures

Here are the data structures with brief descriptions:

jeod::GravityControls	19
Specifies whether and how a GravitySource affects a vehicle	
jeod::GravityIntegFrame	30
Class that aids in determining whether gravity should be applied as a direct effect or a third body effect	
jeod::GravityInteraction	32
Specifies interactions between a vehicle and a set of gravitational bodies	
jeod::GravityManager	37
The master gravitational model for a simulation	
jeod::GravityMessages	41
Specifies the message IDs used in the gravity model	
jeod::GravitySource	44
Models the gravity for a specific planet; pure virtual	
jeod::SphericalHarmonicsDeltaCoeffs	47
Base class for tidal and temporal gravity models	
jeod::SphericalHarmonicsDeltaCoeffsInit	50
Initialization data for a SphericalHarmonicsDeltaCoeffs instance	
jeod::SphericalHarmonicsDeltaControls	52
Provides controls for how a variational model affects a vehicle	
jeod::SphericalHarmonicsGravityControls	54
Specifies whether and how a SphericalHarmonicsGravitySource affects a vehicle	
jeod::SphericalHarmonicsGravitySource	65
Models the gravity for a specific planet using spherical harmonics	
jeod::SphericalHarmonicsGravitySource_default_data	72
jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data	73
jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data	74
jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data	75
jeod::SphericalHarmonicsGravitySource_earth_spherical_default_data	75
jeod::SphericalHarmonicsGravitySource_jupiter_spherical_default_data	76
jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data	77
jeod::SphericalHarmonicsGravitySource_mars_spherical_default_data	78
jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data	78
jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data	79
jeod::SphericalHarmonicsGravitySource_moon_spherical_default_data	80
jeod::SphericalHarmonicsGravitySource_sun_spherical_default_data	81
jeod::SphericalHarmonicsSolidBodyTides	81
Models solid body tidal effects	

jeod::SphericalHarmonicsSolidBodyTidesInit	
Initializes a solid body tides model	84
jeod::SphericalHarmonicsSolidBodyTidesInit_earth_solid_tides_default_data	85
jeod::SphericalHarmonicsTidalEffects	
Models tidal effects as a delta on top of a gravity model	86
jeod::SphericalHarmonicsTidalEffectsInit	
Initializes a tidal gravity model	89

moon_LP150Q.hh	107
moon_spherical.cc	108
moon_spherical.hh	108
spherical_harmonics_calc_nonspherical.cc	
Define SphericalHarmonicsGravityControl calc_nonspherical method, which computes non-spherical gravitational acceleration of a gravitational body on a given position	108
spherical_harmonics_delta_coeffs.cc	
Define member functions for the SphericalHarmonicsDeltaCoeffs class	109
spherical_harmonics_delta_coeffs.hh	
Define the class SphericalHarmonicsDeltaCoeffs, the base class for tidal effects and temporal gravity sub-models	109
spherical_harmonics_delta_coeffs_init.cc	
Define member functions for the SphericalHarmonicsDeltaCoeffsInit class	110
spherical_harmonics_delta_coeffs_init.hh	
Define the class SphericalHarmonicsDeltaCoeffsInit, the base initialization class for tidal effects and temporal gravity sub-models	110
spherical_harmonics_delta_controls.cc	
Define member functions for the SphericalHarmonicsDeltaControls class	111
spherical_harmonics_delta_controls.hh	
Define the gravity controls for the variational gravity models such as solid-body tides	111
spherical_harmonics_gravity_controls.cc	
Define member functions for the SphericalHarmonicsGravityControls class	112
spherical_harmonics_gravity_controls.hh	
Define the gravity controls	112
spherical_harmonics_gravity_source.cc	
Define member functions for the SphericalHarmonicsGravitySource class	113
spherical_harmonics_gravity_source.hh	
Define the spherical harmonics implementation of a gravity body	113
spherical_harmonics_gravity_source_default_data.hh	114
spherical_harmonics_solid_body_tides.cc	
Define member functions for the SphericalHarmonicsSolidBodyTides class	114
spherical_harmonics_solid_body_tides.hh	
Define the SphericalHarmonicsSolidBodyTides class, which models solid-body tidal effects	114
spherical_harmonics_solid_body_tides_init.cc	
Define member functions for the SphericalHarmonicsSolidBodyTidesInit class	115
spherical_harmonics_solid_body_tides_init.hh	
Define the SphericalHarmonicsSolidBodyTidesInit class, which is the initialization class for the solid body tides model	115
spherical_harmonics_tidal_effects.cc	
Define member functions for the SphericalHarmonicsTidalEffects class	116
spherical_harmonics_tidal_effects.hh	
Define the class SphericalHarmonicsTidalEffects, which is the base class for solid-body and ocean tidal effects	116
spherical_harmonics_tidal_effects_init.cc	
Define member functions for the SphericalHarmonicsTidalEffectsInit class	117
spherical_harmonics_tidal_effects_init.hh	
Define the SphericalHarmonicsTidalEffectsInit class, the initialization class for tidal effects models	117

Files

- file [class_declarations.hh](#)
Forward declarations of classes defined for the gravity model.
- file [gravity_controls.hh](#)
Define the gravity controls.
- file [gravity_integ_frame.hh](#)
Define the gravity integration frame class.
- file [gravity_interaction.hh](#)
Define the GravityInteraction class, used to represent the gravitational interaction between a DynBody and a set of planetary bodies.
- file [gravity_manager.hh](#)
Define the Gravity Manager.
- file [gravity_messages.hh](#)
Define the class GravityMessages, the class that specifies the message IDs used in the gravity model.
- file [gravity_source.hh](#)
Define the gravity body base (pure virtual) class.
- file [spherical_harmonics_delta_coeffs.hh](#)
Define the class SphericalHarmonicsDeltaCoeffs, the base class for tidal effects and temporal gravity sub-models.
- file [spherical_harmonics_delta_coeffs_init.hh](#)
Define the class SphericalHarmonicsDeltaCoeffsInit, the base initialization class for tidal effects and temporal gravity sub-models.
- file [spherical_harmonics_delta_controls.hh](#)
Define the gravity controls for the variational gravity models such as solid-body tides.
- file [spherical_harmonics_gravity_controls.hh](#)
Define the gravity controls.
- file [spherical_harmonics_gravity_source.hh](#)
Define the spherical harmonics implementation of a gravity body.
- file [spherical_harmonics_solid_body_tides.hh](#)
Define the SphericalHarmonicsSolidBodyTides class, which models solid-body tidal effects.
- file [spherical_harmonics_solid_body_tides_init.hh](#)
Define the SphericalHarmonicsSolidBodyTidesInit class, which is the initialization class for the solid body tides model.
- file [spherical_harmonics_tidal_effects.hh](#)
Define the class SphericalHarmonicsTidalEffects, which is the base class for solid-body and ocean tidal effects.
- file [spherical_harmonics_tidal_effects_init.hh](#)
Define the SphericalHarmonicsTidalEffectsInit class, the initialization class for tidal effects models.
- file [gravity_controls.cc](#)
Define member functions for the GravityControls class.
- file [gravity_integ_frame.cc](#)
Define member functions for the GravityIntegFrame class.
- file [gravity_interaction.cc](#)
Define methods for the GravityInteraction class.
- file [gravity_manager.cc](#)
Define member functions for the GravityManager class.
- file [gravity_messages.cc](#)
Implement the class GravityMessages.
- file [gravity_source.cc](#)
Define member functions for the GravitySource class.
- file [spherical_harmonics_calc_nonspherical.cc](#)

Define `SphericalHarmonicsGravityControl` `calc_nonspherical` method, which computes non-spherical gravitational acceleration of a gravitational body on a given position.

- file [spherical_harmonics_delta_coeffs.cc](#)

Define member functions for the `SphericalHarmonicsDeltaCoeffs` class.

- file [spherical_harmonics_delta_coeffs_init.cc](#)

Define member functions for the `SphericalHarmonicsDeltaCoeffsInit` class.

- file [spherical_harmonics_delta_controls.cc](#)

Define member functions for the `SphericalHarmonicsDeltaControls` class.

- file [spherical_harmonics_gravity_controls.cc](#)

Define member functions for the `SphericalHarmonicsGravityControls` class.

- file [spherical_harmonics_gravity_source.cc](#)

Define member functions for the `SphericalHarmonicsGravitySource` class.

- file [spherical_harmonics_solid_body_tides.cc](#)

Define member functions for the `SphericalHarmonicsSolidBodyTides` class.

- file [spherical_harmonics_solid_body_tides_init.cc](#)

Define member functions for the `SphericalHarmonicsSolidBodyTidesInit` class.

- file [spherical_harmonics_tidal_effects.cc](#)

Define member functions for the `SphericalHarmonicsTidalEffects` class.

- file [spherical_harmonics_tidal_effects_init.cc](#)

Define member functions for the `SphericalHarmonicsTidalEffectsInit` class.

- class [SphericalHarmonicsGravitySource_default_data](#)
- class [SphericalHarmonicsGravitySource_sun_spherical_default_data](#)
- class [GravityControls](#)
Specifies whether and how a [GravitySource](#) affects a vehicle.
- class [GravityIntegFrame](#)
Class that aids in determining whether gravity should be applied as a direct effect or a third body effect.
- class [GravityInteraction](#)
Specifies interactions between a vehicle and a set of gravitational bodies.
- class [GravityManager](#)
The master gravitational model for a simulation.
- class [GravityMessages](#)
Specifies the message IDs used in the gravity model.
- class [GravitySource](#)
Models the gravity for a specific planet; pure virtual.
- class [SphericalHarmonicsDeltaCoeffs](#)
Base class for tidal and temporal gravity models.
- class [SphericalHarmonicsDeltaCoeffsInit](#)
Initialization data for a [SphericalHarmonicsDeltaCoeffs](#) instance.
- class [SphericalHarmonicsDeltaControls](#)
Provides controls for how a variational model affects a vehicle.

- class [SphericalHarmonicsGravityControls](#)
Specifies whether and how a [SphericalHarmonicsGravitySource](#) affects a vehicle.
- class [SphericalHarmonicsGravitySource](#)
Models the gravity for a specific planet using spherical harmonics.
- class [SphericalHarmonicsSolidBodyTides](#)
Models solid body tidal effects.
- class [SphericalHarmonicsSolidBodyTidesInit](#)
Initializes a solid body tides model.
- class [SphericalHarmonicsTidalEffects](#)
Models tidal effects as a delta on top of a gravity model.
- class [SphericalHarmonicsTidalEffectsInit](#)
Initializes a tidal gravity model.

Variables

- static constexpr double [speed_of_light_sq](#) = 89875517873681764.0
The speed of light squared, in m^2/s^2 .

7.1.1 Detailed Description

Namespace jeod.

7.1.2 Variable Documentation

7.1.2.1 constexpr double jeod::speed_of_light_sq = 89875517873681764.0 [static]

The speed of light squared, in m^2/s^2 .

Definition at line 58 of file gravity_controls.cc.

Referenced by jeod::GravityControls::calc_relativistic().

Chapter 8

Data Structure Documentation

8.1 jeod::GravityControls Class Reference

Specifies whether and how a [GravitySource](#) affects a vehicle.

```
#include <gravity_controls.hh>
```

Inheritance diagram for jeod::GravityControls:

Public Member Functions

- [GravityControls](#) ()
GravityControls constructor.
- virtual [~GravityControls](#) ()
GravityControls destructor.
- virtual void [initialize_control](#) ([GravityManager](#) &grav_man)
Initialize this GravityControl.
- virtual void [reset_control](#) ([BaseDynManager](#) &dyn_manager)
Reset subscriptions for this GravityControl.
- virtual void [gravitation](#) (const double integ_pos[3], unsigned int integ_frame_idx, double body_grav_accel[3], double dgdx[3][3], double Pot[1])
Compute the gravitation at a given position toward a gravity body.
- virtual void [gravitation](#) (const [RefFrame](#) &point_of_interest, unsigned int integ_frame_idx, double body_grav_accel[3], double dgdx[3][3], double &pot)
Compute the gravitation at a given position toward a gravity body.

Static Public Member Functions

- static bool [accel_mag_less_ptr](#) (const [GravityControls](#) *a, const [GravityControls](#) *b)
Compares the magnitude of the two input gravity controls, returning true if a->grav_accel_magsq is less than b->grav_accel_magsq, false otherwise.

Data Fields

- `std::string source_name`
Planet name.
- `bool active`
Gravity for this body active?
- `bool spherical`
Ignore non-spherical effects?
- `bool gradient`
Compute gravity gradient matrix?
- `bool perturbing_only`
Compute only the perturbing gravity?
- `bool battin_method`
Compute third body gravity using Battin's method (Battin, Mathematics and Methods of Astrodynamics)?
- `bool relativistic`
Indicates that the relativistic correction to Newtonian gravitation is to be computed.
- `GravitySource * body`
Pointer to the [GravitySource](#) object named by planet_name.
- `double grav_accel [3]`
Gravitational acceleration toward the [GravitySource](#) at the location of the DynBody, including third body effects.
- `double grav_grad [3][3]`
Gradient of the gravitational acceleration.
- `double grav_pot`
Gravitational potential.
- `double grav_accel_magsq`
Square of the magnitude of grav_accel.

Protected Member Functions

- `virtual void calc_nonspherical (const double integ_pos[3], const double posn[3], const GravityIntegFrame &grav_source_frame, double body_grav_accel[3], double dgdxdx[3][3], double &pot)=0`
Nominally, compute the non-spherical contribution to gravity at a given position.
- `void calc_relativistic (const RefFrame &point_of_interest, const double rel_pos[3], const double rel_vel[3], double perturbing_accel[3])`
Calculates the relativistic correction to gravitational acceleration.
- `void calc_spherical (const double integ_pos[3], const double posn[3], const GravityIntegFrame &grav_source_frame, double body_grav_accel[3], double dgdxdx[3][3], double &pot)`
Calculate the spherical gravitational acceleration, either directly or as a third body acceleration.

Protected Attributes

- `GravityManager * grav_manager`
Pointer to the simulation-wide [GravityManager](#) object.
- `bool subscribed_to_inertial`
Indicates that a subscription to the planet-centered inertial frame of the planet associated with the gravity_source been issued.
- `bool subscribed_to_pfix`
Indicates that a subscription to the planet-centered, planet-fixed frame of the planet associated with the gravity_source been issued.
- `bool skip_spherical`
Some derived classes' calc_nonspherical method computes all contributions to gravitation, including spherical.

Private Member Functions

- [GravityControls](#) (const [GravityControls](#) &)
Not implemented.
- [GravityControls](#) & [operator=](#) (const [GravityControls](#) &)
Not implemented.

Friends

- class [InputProcessor](#)
- void [init_attrjeod__GravityControls](#) ()

8.1.1 Detailed Description

Specifies whether and how a [GravitySource](#) affects a vehicle.

Definition at line 91 of file gravity_controls.hh.

8.1.2 Constructor & Destructor Documentation

8.1.2.1 `jeod::GravityControls::GravityControls (const GravityControls &) [private]`

Not implemented.

8.1.2.2 `jeod::GravityControls::GravityControls ()`

[GravityControls](#) constructor.

Definition at line 65 of file gravity_controls.cc.

References `grav_accel`, `grav_accel_magsq`, `grav_grad`, and `grav_pot`.

8.1.2.3 `jeod::GravityControls::~~GravityControls () [virtual]`

[GravityControls](#) destructor.

Definition at line 90 of file gravity_controls.cc.

8.1.3 Member Function Documentation

8.1.3.1 `static bool jeod::GravityControls::accel_mag_less_ptr (const GravityControls * a, const GravityControls * b) [inline], [static]`

Compares the magnitude of the two input gravity controls, returning true if `a->grav_accel_magsq` is less than `b->grav_accel_magsq`, false otherwise.

Returns

Result of comparison

Parameters

<i>a</i>	First control to be compared.
<i>b</i>	Second control to be compared.

Definition at line 256 of file gravity_controls.hh.

Referenced by jeod::GravityInteraction::sort_controls().

8.1.3.2 `virtual void jeod::GravityControls::calc_nonspherical (const double integ_pos[3], const double posn[3], const GravityIntegFrame & grav_source_frame, double body_grav_accel[3], double dgdx[3][3], double & pot) [protected], [pure virtual]`

Nominally, compute the non-spherical contribution to gravity at a given position.

Derived classes whose override of this function computes the full gravitation model, including the spherical contribution, should set the skip_spherical flag.

Parameters

in	<i>posn</i>	Inertial position of the point of interest relative to the gravitational body.
out	<i>body_grav_accel</i>	Acceleration at the point of interest due to the gravitational body.
out	<i>dgdx</i>	Gravity gradient at the point of interest.
out	<i>Pot</i>	Specific gravitational potential energy.

Implemented in [jeod::SphericalHarmonicsGravityControls](#).

Referenced by gravitation().

8.1.3.3 `void jeod::GravityControls::calc_relativistic (const RefFrame & point_of_interest, const double rel_pos[3], const double rel_vel[3], double perturbing_accel[3]) [protected]`

Calculates the relativistic correction to gravitational acceleration.

Parameters

<i>point_of_interest</i>	The point of interest, as a reference frame.
<i>rel_pos</i>	Displacement vector from the grav body to the POI.
<i>rel_vel</i>	Time derivative of rel_pos.
<i>perturbing_accel</i>	Output relativistic accel, sans the Newtonian term.

Implements equation 27 (Folkner) / equation 4 (Genova) to compute a parameteric post-Newtonian correction to gravitation. The referenced equation is of the form

$$\begin{aligned}
 a_{A,\text{pm-pm}} = & \sum_{B \neq A} \frac{GM_B}{r_{AB}^3} (r_B - r_A) \left(1 + \frac{s_1}{c^2}\right) \\
 & + \frac{1}{c^2} \sum_{B \neq A} \frac{GM_B}{r_{AB}^3} (v_A - v_B) \left((r_A - r_B) \cdot ((2 + 2\gamma)v_A - (1 + 2\gamma)v_B) \right) \\
 & + \frac{3 + 4\gamma}{2c^2} \sum_{B \neq A} \frac{GM_B}{r_{AB}} a_B
 \end{aligned}$$

where a_B is the net acceleration of gravitating body B toward the other gravitating bodies (typically taken to be the Newtonian gravitational acceleration) and

$$\begin{aligned}
 s_1 = & -2(\beta + \gamma) \sum_{C \neq A} \frac{GM_C}{r_{AC}} - (2\beta - 1) \sum_{C \neq A} \frac{GM_C}{r_{BC}} \\
 & + \gamma v_a^2 + (1 + \gamma) v_b^2 - 2(1 + \gamma) v_A \cdot v_B \\
 & - \frac{3}{2} \left(\frac{(r_A - r_B) \cdot v_B}{r_B} \right)^2 \\
 & + \frac{1}{2} (r_B - r_A) \cdot a_B
 \end{aligned}$$

In terms of the referenced equation, the intent of this function is to compute the relativistic portion of the acceleration of body *A* toward body *B*. With this, the expression this function computes is

$$\Delta a_{A,B} = \frac{1}{c} \frac{GM_B}{r_{AB}} \left\{ \begin{aligned} & \frac{r_B - r_A}{r_{AB}^2} s_1 \\ & + \frac{v_A - v_B}{r_{AB}^2} \left((r_A - r_B) \cdot ((2 + 2\gamma)v_A - (1 + 2\gamma)v_B) \right) \\ & + \frac{3 + 4\gamma}{2} a_B \end{aligned} \right\}$$

Note that the common factor $\frac{1}{c} \frac{GM_B}{r_{AB}}$ is unitless and thus each of the three terms in the braced expression has units of acceleration.

The referenced equations explicitly involve the parameterized post-Newtonian (PPN) factors β and γ . This function hardcodes both of those factors as one, consistent with general relativity. For example, the factor $(3 + 4\gamma)/2$ becomes 3.5 in the code. Magic numbers that involve β or γ , including a factor of one (e.g., $2\beta - 1$), are noted in comments.

8.1.5.1 `bool jeod::GravityControls::active`

Gravity for this body active?

`trick_units(-)`

Definition at line 105 of file gravity_controls.hh.

Referenced by `jeod::GravityManager::gravitation()`, `reset_control()`, `jeod::GravityInteraction::sort_controls()`, and `jeod::SphericalHarmonicsGravityControls::update_deltacoeffs()`.

8.1.5.2 `bool jeod::GravityControls::battin_method`

Compute third body gravity using Battin's method (Battin, Mathematics and Methods of Astrodynamics)?

`trick_units(-)`

Definition at line 126 of file gravity_controls.hh.

Referenced by `calc_spherical()`.

8.1.5.3 `GravitySource* jeod::GravityControls::body`

Pointer to the [GravitySource](#) object named by `planet_name`.

Note

Users should not set this data member in the input file.`trick_units(-)`

Definition at line 139 of file gravity_controls.hh.

Referenced by `calc_relativistic()`, `calc_spherical()`, `gravitation()`, `jeod::SphericalHarmonicsGravityControls::initialize_control()`, `initialize_control()`, and `reset_control()`.

8.1.5.4 `bool jeod::GravityControls::gradient`

Compute gravity gradient matrix?

`trick_units(-)`

Definition at line 115 of file gravity_controls.hh.

Referenced by `jeod::SphericalHarmonicsGravityControls::calc_nonspherical()`, `calc_spherical()`, and `jeod::SphericalHarmonicsGravityControls::check_validity()`.

8.1.5.5 `double jeod::GravityControls::grav_accel[3]`

Gravitational acceleration toward the [GravitySource](#) at the location of the `DynBody`, including third body effects.

`trick_units(m/s2)`

Definition at line 145 of file `gravity_controls.hh`.

Referenced by `jeod::GravityManager::gravitation()`, `GravityControls()`, and `jeod::GravityInteraction::sort_controls()`.

8.1.5.6 `double jeod::GravityControls::grav_accel_magsq`

Square of the magnitude of `grav_accel`.

`trick_units(m2/s4)`

Definition at line 160 of file `gravity_controls.hh`.

Referenced by `GravityControls()`, and `jeod::GravityInteraction::sort_controls()`.

8.1.5.7 `double jeod::GravityControls::grav_grad[3][3]`

Gradient of the gravitational acceleration.

`trick_units(1/s2)`

Definition at line 150 of file `gravity_controls.hh`.

Referenced by `jeod::GravityManager::gravitation()`, and `GravityControls()`.

8.1.5.8 `GravityManager*` `jeod::GravityControls::grav_manager` `[protected]`

Pointer to the simulation-wide [GravityManager](#) object.

Note

Users should not set this data member in the input file. `trick_units(-)`

Definition at line 169 of file `gravity_controls.hh`.

Referenced by `calc_relativistic()`, and `initialize_control()`.

8.1.5.9 `double jeod::GravityControls::grav_pot`

Gravitational potential.

`trick_units(m2/s2)`

Definition at line 155 of file `gravity_controls.hh`.

Referenced by `jeod::GravityManager::gravitation()`, and `GravityControls()`.

8.1.5.10 `bool jeod::GravityControls::perturbing_only`

Compute only the perturbing gravity?

`trick_units(-)`

Definition at line 120 of file `gravity_controls.hh`.

Referenced by gravitation().

8.1.5.11 bool jeod::GravityControls::relativistic

Indicates that the relativistic correction to Newtonian gravitation is to be computed.

The public methods `enable_relativistic_correction` and `disable_relativistic_correction` set / clear this flag. `trick_units(-)`

Definition at line 133 of file `gravity_controls.hh`.

Referenced by gravitation().

8.1.5.12 bool jeod::GravityControls::skip_spherical [protected]

Some derived classes' `calc_nonspherical` method computes all contributions to gravitation, including spherical.

Those classes need to set this flag. The flag is clear in the base class and in the [SphericalHarmonicsGravityControls](#) derived class. `trick_units(-)`

Definition at line 191 of file `gravity_controls.hh`.

Referenced by gravitation().

8.1.5.13 std::string jeod::GravityControls::source_name

Planet name.

`trick_units(-)`

Definition at line 100 of file `gravity_controls.hh`.

Referenced by `jeod::SphericalHarmonicsGravityControls::check_validity()`, `initialize_control()`, and `reset_control()`.

8.1.5.14 bool jeod::GravityControls::spherical

Ignore non-spherical effects?

`trick_units(-)`

Definition at line 110 of file `gravity_controls.hh`.

Referenced by `jeod::SphericalHarmonicsGravityControls::check_validity()`, `gravitation()`, and `reset_control()`.

8.1.5.15 bool jeod::GravityControls::subscribed_to_inertial [protected]

Indicates that a subscription to the planet-centered inertial frame of the planet associated with the `gravity_source` been issued.

Note

Users should not set this data member in the input file. `trick_units(-)`

Definition at line 176 of file `gravity_controls.hh`.

Referenced by `reset_control()`.

8.1.5.16 bool jeod::GravityControls::subscribed_to_pfix [protected]

Indicates that a subscription to the planet-centered, planet-fixed frame of the planet associated with the `gravity_source` been issued.

Note

Users should not set this data member in the input file.trick_units(–)

Definition at line 183 of file gravity_controls.hh.

Referenced by reset_control().

8.3 `jeod::GravityInteraction` Class Reference

Specifies interactions between a vehicle and a set of gravitational bodies.

```
#include <gravity_interaction.hh>
```

Public Member Functions

- [GravityInteraction](#) ()
Construct a [GravityInteraction](#) instance.
- virtual [~GravityInteraction](#) ()
Destruct a [GravityInteraction](#) instance.
- virtual void [set_integ_frame](#) (const EphemerisRefFrame &ref_frame_in, const BaseDynManager &dyn_manager)
Set the integration frame and associated integration frame index.
- virtual void [add_control](#) ([GravityControls](#) *control)
Add a new [GravityControls](#) to the grav_controls list.
- virtual void [remove_control](#) ([GravityControls](#) *control)
Remove a [GravityControls](#) from the grav_controls list.
- virtual void [initialize_controls](#) (BaseDynManager &dyn_manager, [GravityManager](#) &grav_manager)
Initialize all [GravityControls](#) in the grav_controls list.
- virtual void [reset_controls](#) (BaseDynManager &dyn_manager)
Reset all [GravityControls](#) in the grav_controls list.
- virtual void [sort_controls](#) ()
Sort the [GravityControls](#) in the grav_controls list in increasing acceleration magnitude order.

Data Fields

- unsigned int [integ_frame_index](#)
The integration frame index number of the DynBody's integration frame.

- double [grav_accel](#) [3]
The total gravitational acceleration of the DynBody toward all planetary with which the vehicle interacts gravitationally.
- double [grav_grad](#) [3][3]
The gradient of the gravitational acceleration vector evaluated at the DynBody's position, expressed in the vehicle's integration frame.
- double [grav_pot](#)
The total gravitational potential at the location of the DynBody due to the gravity fields of all "active" gravitational bodies (i.e., planets).
- JeodPointerVector
 < [GravityControls](#) >::type [grav_controls](#)
The gravity controls list for a DynBody specifies the planetary bodies with which the DynBody interacts and specifies the nature of those interactions.

Private Member Functions

- [GravityInteraction](#) (const [GravityInteraction](#) &frame)
Not implemented.
- [GravityInteraction](#) & operator= (const [GravityInteraction](#) &frame)
Not implemented.

8.3.1 Detailed Description

Specifies interactions between a vehicle and a set of gravitational bodies.

Definition at line 97 of file gravity_interaction.hh.

8.3.2 Constructor & Destructor Documentation

8.3.2.1 jeod::GravityInteraction::GravityInteraction (const [GravityInteraction](#) & frame) [private]

Not implemented.

8.3.2.2 jeod::GravityInteraction::GravityInteraction (void)

Construct a [GravityInteraction](#) instance.

Definition at line 60 of file gravity_interaction.cc.

References [grav_accel](#), [grav_controls](#), and [grav_grad](#).

8.3.2.3 jeod::GravityInteraction::~GravityInteraction (void) [virtual]

Destruct a [GravityInteraction](#) instance.

Definition at line 78 of file gravity_interaction.cc.

References [grav_controls](#).

8.3.3 Member Function Documentation

8.3.3.1 `void jeod::GravityInteraction::add_control (GravityControls * control)` [virtual]

Add a new [GravityControls](#) to the grav_controls list.

Parameters

in	<i>control</i>	Control to be added
----	----------------	---------------------

Definition at line 108 of file gravity_interaction.cc.

References jeod::GravityMessages::duplicate_entry, and grav_controls.

8.3.3.2 void jeod::GravityInteraction::initialize_controls (BaseDynManager & *dyn_manager*, GravityManager & *grav_manager*) [virtual]

Initialize all [GravityControls](#) in the grav_controls list.

Parameters

in	<i>dyn_manager</i>	Ref to Dyn Manager
in	<i>grav_manager</i>	Ref to Gravity Manager

Definition at line 158 of file gravity_interaction.cc.

References grav_controls, and reset_controls().

8.3.3.3 GravityInteraction& jeod::GravityInteraction::operator= (const GravityInteraction & *frame*) [private]

Not implemented.

8.3.3.4 void jeod::GravityInteraction::remove_control (GravityControls * *control*) [virtual]

Remove a [GravityControls](#) from the grav_controls list.

Parameters

in	<i>control</i>	GravityControls to be removed.
----	----------------	--

Definition at line 134 of file gravity_interaction.cc.

References grav_controls, and jeod::GravityMessages::missing_entry.

8.3.3.5 void jeod::GravityInteraction::reset_controls (BaseDynManager & *dyn_manager*) [virtual]

Reset all [GravityControls](#) in the grav_controls list.

Definition at line 178 of file gravity_interaction.cc.

References grav_controls.

Referenced by initialize_controls().

8.3.3.6 void jeod::GravityInteraction::set_integ_frame (const EphemerisRefFrame & *ref_frame*, const BaseDynManager & *dyn_manager*) [virtual]

Set the integration frame and associated integration frame index.

Assumptions and Limitations

- Provided frame is a valid integration frame.

Parameters

in	<i>ref_frame</i>	Integration frame
in	<i>dyn_manager</i>	Dynamics manager

Definition at line 95 of file gravity_interaction.cc.

References integ_frame_index.

8.3.3.7 void jeod::GravityInteraction::sort_controls (void) [virtual]

Sort the [GravityControls](#) in the grav_controls list in increasing acceleration magnitude order.

Definition at line 195 of file gravity_interaction.cc.

References jeod::GravityControls::accel_mag_less_ptr(), jeod::GravityControls::active, jeod::GravityControls::grav_accel, jeod::GravityControls::grav_accel_magsq, and grav_controls.

8.3.4 Friends And Related Function Documentation

8.3.4.1 void init_attrjeod__GravityInteraction () [friend]

8.3.4.2 friend class InputProcessor [friend]

Definition at line 99 of file gravity_interaction.hh.

8.3.5 Field Documentation

8.3.5.1 double jeod::GravityInteraction::grav_accel[3]

The total gravitational acceleration of the DynBody toward all planetary with which the vehicle interacts gravitationally.

The acceleration is expressed in the DynBody's integration frame. The gravitational acceleration of the integration frame itself toward the planetary bodies is excluded from this total acceleration. For example, for a vehicle integrated in Earth-centered inertial, the Sun component of the total gravitational acceleration is the Newtonian gravitation acceleration of the vehicle toward the Sun less the Newtonian gravitational acceleration of the Earth toward the Sun.trick_units(m/s2)

Definition at line 123 of file gravity_interaction.hh.

Referenced by jeod::GravityManager::gravitation(), and GravityInteraction().

8.3.5.2 JeodPointerVector<GravityControls>::type jeod::GravityInteraction::grav_controls

The gravity controls list for a DynBody specifies the planetary bodies with which the DynBody interacts and specifies the nature of those interactions.

trick_io(**)

Definition at line 143 of file gravity_interaction.hh.

Referenced by add_control(), jeod::GravityManager::gravitation(), GravityInteraction(), initialize_controls(), remove_control(), reset_controls(), sort_controls(), and ~GravityInteraction().

8.3.5.3 double jeod::GravityInteraction::grav_grad[3][3]

The gradient of the gravitational acceleration vector evaluated at the DynBody's position, expressed in the vehicle's integration frame.

trick_units(1/s2)

Definition at line 129 of file gravity_interaction.hh.

Referenced by jeod::GravityManager::gravitation(), and GravityInteraction().

8.3.5.4 double jeod::GravityInteraction::grav_pot

The total gravitational potential at the location of the DynBody due to the gravity fields of all "active" gravitational bodies (i.e., planets).

trick_units(m2/s2)

Definition at line 136 of file gravity_interaction.hh.

Referenced by jeod::GravityManager::gravitation().

8.3.5.5 unsigned int jeod::GravityInteraction::integ_frame_index

The integration frame index number of the DynBody's integration frame.

This data member must be kept in strict synchronization with the DynBody's integration frame.trick_units(-)

Definition at line 110 of file gravity_interaction.hh.

Referenced by jeod::GravityManager::gravitation(), and set_integ_frame().

The documentation for this class was generated from the following files:

- [gravity_interaction.hh](#)

8.4.1 Detailed Description

The master gravitational model for a simulation.

Definition at line 91 of file `gravity_manager.hh`.

8.4.2 Constructor & Destructor Documentation

8.4.2.1 `jeod::GravityManager::GravityManager (const GravityManager &)` `[private]`

8.4.2.2 `jeod::GravityManager::GravityManager (void)`

`GravityManager` constructor.

Definition at line 59 of file `gravity_manager.cc`.

8.4.2.3 `jeod::GravityManager::~GravityManager (void)`

`GravityManager` destructor.

Definition at line 71 of file `gravity_manager.cc`.

References `sources`.

8.4.3 Member Function Documentation

8.4.3.1 `void jeod::GravityManager::add_grav_source (GravitySource & source)`

Create a gravitational body, initialize it with the supplied gravity coefficients, and add it to the vector of bodies.

Parameters

<i>in</i>	<i>source</i>	Gravity source to be added
-----------	---------------	----------------------------

Definition at line 118 of file gravity_manager.cc.

References jeod::GravityMessages::duplicate_entry, find_grav_source(), jeod::GravityMessages::invalid_name, jeod::GravitySource::name, and sources.

8.4.3.2 GravitySource * jeod::GravityManager::find_grav_source (const std::string & source_name) const

Find the gravitational body with the given name.

Returns

Pointer to found body

Parameters

<i>in</i>	<i>source_name</i>	Name of gravity source to be found
-----------	--------------------	------------------------------------

Definition at line 85 of file gravity_manager.cc.

References jeod::GravityMessages::invalid_name, jeod::GravitySource::name, and sources.

Referenced by add_grav_source(), and jeod::GravityControls::initialize_control().

8.4.3.3 const std::vector<GravitySource*>& jeod::GravityManager::get_bodies () const [inline]

Get the vector of gravitational bodies.

Warning

Do not modify the vector, or elements of it.

Definition at line 163 of file gravity_manager.hh.

References sources.

Referenced by jeod::GravityControls::calc_relativistic().

8.4.3.4 void jeod::GravityManager::gravitation (const double integ_pos[3], GravityInteraction & grav)

Compute the gravitational attraction of gravitational bodies on the provided dynamic body.

Assumptions and Limitations

- Only the gravitational bodies specified in the dynamic body's gravity controls have a bearing on the dynamic body's state.

Warning

This overload is deprecated.

Parameters

in	<i>integ_pos</i>	Dyn body location (integ frm) Units: M
in, out	<i>grav</i>	Gravity interaction

Definition at line 193 of file gravity_manager.cc.

References jeod::GravityControls::active, jeod::GravityInteraction::grav_accel, jeod::GravityControls::grav_accel, jeod::GravityInteraction::grav_controls, jeod::GravityInteraction::grav_grad, jeod::GravityControls::grav_grad, jeod::GravityInteraction::grav_pot, jeod::GravityControls::grav_pot, jeod::GravityControls::gravitation(), and jeod::GravityInteraction::integ_frame_index.

8.4.3.5 void jeod::GravityManager::gravitation (const RefFrame & *point*, GravityInteraction & *grav*)

Compute the gravitational attraction of gravitational bodies on the provided dynamic body.

Assumptions and Limitations

- Only the gravitational bodies specified in the dynamic body's gravity controls have a bearing on the dynamic body's state.
- The supplied reference frame is assumed to be a direct child of the dynamic body's integration frame.

Parameters

in	<i>point</i>	Point of interest, as a reference frame.
in, out	<i>grav</i>	Gravity interaction

Definition at line 240 of file gravity_manager.cc.

References jeod::GravityControls::active, jeod::GravityInteraction::grav_accel, jeod::GravityControls::grav_accel, jeod::GravityInteraction::grav_controls, jeod::GravityInteraction::grav_grad, jeod::GravityControls::grav_grad, jeod::GravityInteraction::grav_pot, jeod::GravityControls::grav_pot, jeod::GravityControls::gravitation(), and jeod::GravityInteraction::integ_frame_index.

8.4.3.6 void jeod::GravityManager::initialize_model (BaseDynManager & *manager*)

Perform base initialization.

Note

This method differs from the other initialize_models methods in that this method takes no coefficients as arguments. The S_define must call add_grav_source explicitly when this signature is used.

Parameters

in, out	<i>manager</i>	Dynamics manager
---------	----------------	------------------

Definition at line 154 of file gravity_manager.cc.

8.4.3.7 void jeod::GravityManager::initialize_state (const BaseDynManager & *manager*)

Pass the initialize_state method to each [GravitySource](#) object registered with the gravity manager.

Assumptions and Limitations

- Initialization phasing: The following must have been called prior to calling this method:
 - [GravityManager::initialize_model](#) to register the [GravityManager](#) object with the dynamics manager
 - [GravityManager::add_grav_source](#) to register all [GravitySource](#) objects in the simulation with the gravity manager.

- Planet::register_model to associate the planet with a [GravitySource](#).
- DynamicsManager::activate_ephemerides to identify which reference frames can serve as integration frames.

Parameters

<code>in, out</code>	<code>manager</code>	Dynamics manager
----------------------	----------------------	------------------

Definition at line 178 of file gravity_manager.cc.

References sources.

8.5 jeod::GravityMessages Class Reference

Specifies the message IDs used in the gravity model.

```
#include <gravity_messages.hh>
```

Static Public Attributes

- static char const * [duplicate_entry](#) = "environment/gravity/" "duplicate_entry"
Issued when a duplicate entry is detected.
- static char const * [missing_entry](#) = "environment/gravity/" "missing_entry"
Issued when a missing entry is detected.
- static char const * [invalid_name](#) = "environment/gravity/" "invalid_name"
Error issued when a name is invalid (null or empty).
- static char const * [invalid_object](#) = "environment/gravity/" "invalid_object"
Error issued when an object is invalid (wrong type).
- static char const * [invalid_limit](#) = "environment/gravity/" "invalid_limit"

Issued when a limit is out of range.

- static char const * [domain_error](#) = "environment/gravity/" "domain_error"

Issued when a value is outside the known-to-be-valid range, e.g., a radial distance less than the planet's equatorial radius.

- static char const * [null_pointer](#) = "environment/gravity/" "null_pointer"

Error issued when a pointer is invalid (null or empty).

Definition at line 105 of file spherical_harmonics_delta_controls.hh.

8.9.4.6 unsigned int jeod::SphericalHarmonicsDeltaControls::order

Coefficient order to be used for this gravity effect.

trick_units(—)

Definition at line 125 of file spherical_harmonics_delta_controls.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::sum_deltacoeffs().

The documentation for this class was generated from the following files:

- [spherical_harmonics_delta_controls.hh](#)
- [spherical_harmonics_delta_controls.cc](#)

8.10 jeod::SphericalHarmonicsGravityControls Class Reference

Specifies whether and how a [SphericalHarmonicsGravitySource](#) affects a vehicle.

```
#include <spherical_harmonics_gravity_controls.hh>
```

Inheritance diagram for jeod::SphericalHarmonicsGravityControls:

Public Member Functions

- [SphericalHarmonicsGravityControls](#) ()
SphericalHarmonicsGravityControls constructor.
- [~SphericalHarmonicsGravityControls](#) () override
SphericalHarmonicsGravityControls destructor.
- void [initialize_control](#) ([GravityManager](#) &[grav_manager](#)) override
Initialize this GravityControl.
- virtual void [add_deltacontrol](#) ([SphericalHarmonicsDeltaControls](#) *[delta_control](#))
Add a new GravityDeltaControls to the var_effects list.
- unsigned int [get_degree](#) (void)
Output the current functional degree.
- unsigned int [get_order](#) (void)
Output the current functional order.
- void [get_degree_order](#) (unsigned int &[current_degree](#), unsigned int &[current_order](#))
Output the current functional degree and order.
- unsigned int [get_grad_degree](#) (void)
Output the current functional gradient degree.
- unsigned int [get_grad_order](#) (void)
Output the current functional gradient order.
- void [get_grad_degree_order](#) (unsigned int &[curr_grad_degree](#), unsigned int &[curr_grad_order](#))
Output the current functional gradient degree and order.
- void [set_degree](#) (unsigned int [new_degree](#))
Update the functional degree.
- void [set_order](#) (unsigned int [new_order](#))
Update the functional order.
- void [set_degree_order](#) (unsigned int [new_degree](#), unsigned int [new_order](#))
Update the functional degree and order.
- void [set_grad_degree](#) (unsigned int [new_grad_degree](#))
Update the functional gradient degree.
- void [set_grad_order](#) (unsigned int [new_grad_order](#))
Update the functional gradient order.
- void [set_grad_degree_order](#) (unsigned int [new_grad_degree](#), unsigned int [new_grad_order](#))
Update the functional gradient degree and order.
- void [disable_min_radius_warnings](#) ()
Disable minimum radius warnings for this spherical harmonics gravity control.

Data Fields

- [SphericalHarmonicsGravitySource](#) * [harmonics_source](#)
The GravitySource pointer from the base class, recast.
- double ** [Pnm](#)
LeGendre polynomials used to calculate non-spherical attraction.
- unsigned int [delta_degree](#)

- Coefficient degree to be used for totaling up all active delta_coeffs.
 - unsigned int [delta_order](#)
- Coefficient order to be used for totaling up all active delta_coeffs.
 - double ** [delta_Cnm](#)
- Array for collecting all active normalized real (cosine) variational spherical harmonic coefficients.
 - double ** [delta_Snm](#)
- Array for collecting all active normalized real (sine) variational spherical harmonic coefficients.
 - double [total_dC20](#)
- delta C20 coefficient for collecting first order effects of all active delta_coeffs.
 - unsigned int [degree](#)
- Non-spherical degree to be used.
 - unsigned int [order](#)
- Non-spherical order to be used.
 - unsigned int [gradient_degree](#)
- Non-spherical degree to be used for computing gradient.
 - unsigned int [gradient_order](#)
- Non-spherical order to be used for computing gradient.
 - JeodPointerVector
- < [SphericalHarmonicsDeltaControls](#) >
 - ::type [var_effects](#)
- List of controls for variational gravity effects like solid-body tides.

Protected Member Functions

- void [calc_nonspherical](#) (const double integ_pos[3], const double posn[3], const [GravityIntegFrame](#) &grav_source_frame, double body_grav_accel[3], double dgdx[3][3], double &pot) override
 - Compute the gravitational acceleration at a given position toward a gravitational body assuming the body has a non-spherical mass distribution.
- virtual void [check_validity](#) (void)
 - Check the validity of the gravity controls.
- virtual void [update_deltacoeffs](#) (void)
 - Command all of the gravitational variation effects to update themselves.
- virtual void [sum_deltacoeffs](#) (void)
 - Loop over all of the active gravitational variation effects models and aggregate their changes to the gravity coefficients into the top-level delta-coeffs "bin" for this gravity body.

Protected Attributes

- bool [min_radius_warn](#)
 - Indicates that the minimum radius threshold has been crossed and that a warning has been issued for such.

Private Member Functions

- [SphericalHarmonicsGravityControls](#) (const [SphericalHarmonicsGravityControls](#) &)
 - Not implemented.
- [SphericalHarmonicsGravityControls](#) & operator= (const [SphericalHarmonicsGravityControls](#) &)
 - Not implemented.

Friends

- class [InputProcessor](#)

Additional Inherited Members

8.10.1 Detailed Description

Specifies whether and how a [SphericalHarmonicsGravitySource](#) affects a vehicle.

Definition at line 89 of file `spherical_harmonics_gravity_controls.hh`.

8.10.2 Constructor & Destructor Documentation

8.10.2.1 `jeod::SphericalHarmonicsGravityControls::SphericalHarmonicsGravityControls (const SphericalHarmonicsGravityControls &) [private]`

Not implemented.

8.10.2.2 `jeod::SphericalHarmonicsGravityControls::SphericalHarmonicsGravityControls (void)`

[SphericalHarmonicsGravityControls](#) constructor.

Definition at line 56 of file `spherical_harmonics_gravity_controls.cc`.

References `var_effects`.

8.10.2.3 `jeod::SphericalHarmonicsGravityControls::~~SphericalHarmonicsGravityControls (void) [override]`

[SphericalHarmonicsGravityControls](#) destructor.

Definition at line 83 of file `spherical_harmonics_gravity_controls.cc`.

References `jeod::SphericalHarmonicsGravitySource::degree`, `delta_Cnm`, `delta_degree`, `delta_Snm`, `harmonics_source`, `Pnm`, and `var_effects`.

8.10.3 Member Function Documentation

8.10.3.1 `void jeod::SphericalHarmonicsGravityControls::add_deltacontrol (SphericalHarmonicsDeltaControls * delta_control) [virtual]`

Add a new GravityDeltaControls to the `var_effects` list.

Parameters

<code>in</code>	<code>delta_control</code>	Control to be added
-----------------	----------------------------	---------------------

Definition at line 186 of file `spherical_harmonics_gravity_controls.cc`.

References `jeod::SphericalHarmonicsDeltaCoeffs::degree`, `delta_Cnm`, `delta_degree`, `delta_order`, `delta_Snm`, `jeod::SphericalHarmonicsDeltaControls::grav_effect`, `jeod::SphericalHarmonicsDeltaCoeffs::order`, and `var_effects`.

8.10.3.2 `void jeod::SphericalHarmonicsGravityControls::calc_nonspherical (const double integ_pos [3], const double posn[3], const GravityIntegFrame & grav_source_frame, double body_grav_accel[3], double dgdx[3][3], double & pot) [override], [protected], [virtual]`

Compute the gravitational acceleration at a given position toward a gravitational body assuming the body has a non-spherical mass distribution.

Parameters

in	<i>posn</i>	Point of interest, inrtl coords Units: M
out	<i>body_grav_accel</i>	Accel for given grav body Units: M/s ²
out	<i>dgdxd</i>	Gradient for given grav body Units: 1/s ²
out	<i>Pot</i>	Potential

Implements [jeod::GravityControls](#).

Definition at line 56 of file `spherical_harmonics_calc_nonspherical.cc`.

References `jeod::SphericalHarmonicsGravitySource::alpha`, `jeod::SphericalHarmonicsGravitySource::beta`, `jeod::SphericalHarmonicsGravitySource::Cnm`, `degree`, `jeod::GravityMessages::domain_error`, `jeod::SphericalHarmonicsGravitySource::eta`, `jeod::GravityControls::gradient`, `gradient_degree`, `gradient_order`, `harmonics_source`, `jeod::SphericalHarmonicsGravitySource::int_to_double`, `min_radius_warn`, `jeod::GravitySource::mu`, `jeod::GravitySource::name`, `jeod::SphericalHarmonicsGravitySource::nrdiag`, `order`, `jeod::GravitySource::pfix`, `Pnm`, `jeod::SphericalHarmonicsGravitySource::radius`, `jeod::SphericalHarmonicsGravitySource::Snm`, `sum_deltacoeffs()`, `jeod::SphericalHarmonicsGravitySource::tide_free`, `jeod::SphericalHarmonicsGravitySource::tide_free_delta`, `total_dC20`, `update_deltacoeffs()`, `jeod::SphericalHarmonicsGravitySource::upsilon`, `var_effects`, `jeod::SphericalHarmonicsGravitySource::xi`, and `jeod::SphericalHarmonicsGravitySource::zeta`.

8.10.3.3 `void jeod::SphericalHarmonicsGravityControls::check_validity (void)` `[protected]`, `[virtual]`

Check the validity of the gravity controls.

Definition at line 427 of file `spherical_harmonics_gravity_controls.cc`.

References `jeod::SphericalHarmonicsGravitySource::degree`, `degree`, `jeod::GravityControls::gradient`, `gradient_degree`, `gradient_order`, `harmonics_source`, `jeod::GravityMessages::invalid_limit`, `jeod::GravityMessages::invalid_object`, `jeod::GravitySource::name`, `jeod::SphericalHarmonicsGravitySource::order`, `order`, `jeod::GravityControls::source_name`, and `jeod::GravityControls::spherical`.

Referenced by `initialize_control()`, `set_degree()`, `set_degree_order()`, `set_grad_degree()`, `set_grad_degree_order()`, `set_grad_order()`, and `set_order()`.

8.10.3.4 `void jeod::SphericalHarmonicsGravityControls::disable_min_radius_warnings ()` `[inline]`

Disable minimum radius warnings for this spherical harmonics gravity control.

Definition at line 265 of file `spherical_harmonics_gravity_controls.hh`.

8.10.3.5 `unsigned int jeod::SphericalHarmonicsGravityControls::get_degree (void)`

Output the current functional degree.

Returns

Current degree

Definition at line 238 of file `spherical_harmonics_gravity_controls.cc`.

References `degree`.

8.10.3.6 `void jeod::SphericalHarmonicsGravityControls::get_degree_order (unsigned int & current_degree, unsigned int & current_order)`

Output the current functional degree and order.

Parameters

out	<i>current_degree</i>	Current degree
out	<i>current_order</i>	Current order

Definition at line 263 of file spherical_harmonics_gravity_controls.cc.

References degree, and order.

8.10.3.7 unsigned int jeod::SphericalHarmonicsGravityControls::get_grad_degree (void)

Output the current functional gradient degree.

Returns

Current gradient degree

Definition at line 279 of file spherical_harmonics_gravity_controls.cc.

References gradient_degree.

8.10.3.8 void jeod::SphericalHarmonicsGravityControls::get_grad_degree_order (unsigned int & curr_grad_degree, unsigned int & curr_grad_order)

Output the current functional gradient degree and order.

Parameters

out	<i>curr_grad_degree</i>	Current gradient degree
out	<i>curr_grad_order</i>	Current gradient order

Definition at line 304 of file spherical_harmonics_gravity_controls.cc.

References gradient_degree, and gradient_order.

8.10.3.9 unsigned int jeod::SphericalHarmonicsGravityControls::get_grad_order (void)

Output the current functional gradient order.

Returns

Current gradient order

Definition at line 291 of file spherical_harmonics_gravity_controls.cc.

References gradient_order.

8.10.3.10 unsigned int jeod::SphericalHarmonicsGravityControls::get_order (void)

Output the current functional order.

Returns

Current order

Definition at line 250 of file spherical_harmonics_gravity_controls.cc.

References order.

8.10.3.11 `void jeod::SphericalHarmonicsGravityControls::initialize_control (GravityManager & grav_manager)`
`[override], [virtual]`

Initialize this GravityControl.

Parameters

in	<i>grav_manager</i>	Ref to Gravity Manager
----	---------------------	------------------------

Reimplemented from [jeod::GravityControls](#).

Definition at line 121 of file `spherical_harmonics_gravity_controls.cc`.

References `jeod::GravityControls::body`, `check_validity()`, `jeod::SphericalHarmonicsGravitySource::degree`, `harmonics_source`, `jeod::GravityControls::initialize_control()`, and `Pnm`.

8.10.3.12 SphericalHarmonicsGravityControls& jeod::SphericalHarmonicsGravityControls::operator= (const SphericalHarmonicsGravityControls &) [private]

Not implemented.

8.10.3.13 void jeod::SphericalHarmonicsGravityControls::set_degree (unsigned int *new_degree*)

Update the functional degree.

Parameters

in	<i>new_degree</i>	New desired degree
----	-------------------	--------------------

Definition at line 320 of file `spherical_harmonics_gravity_controls.cc`.

References `check_validity()`, and `degree`.

8.10.3.14 void jeod::SphericalHarmonicsGravityControls::set_degree_order (unsigned int *new_degree*, unsigned int *new_order*)

Update the functional degree and order.

Parameters

in	<i>new_degree</i>	New desired degree
in	<i>new_order</i>	New desired order

Definition at line 355 of file `spherical_harmonics_gravity_controls.cc`.

References `check_validity()`, `degree`, and `order`.

8.10.3.15 void jeod::SphericalHarmonicsGravityControls::set_grad_degree (unsigned int *new_grad_degree*)

Update the functional gradient degree.

Parameters

in	<i>new_grad_degree</i>	New desired degree
----	------------------------	--------------------

Definition at line 374 of file `spherical_harmonics_gravity_controls.cc`.

References `check_validity()`, and `gradient_degree`.

8.10.3.16 void jeod::SphericalHarmonicsGravityControls::set_grad_degree_order (unsigned int *new_grad_degree*, unsigned int *new_grad_order*)

Update the functional gradient degree and order.

Parameters

in	<i>new_grad_degree</i>	New desired degree
in	<i>new_grad_order</i>	New desired order

Definition at line 409 of file spherical_harmonics_gravity_controls.cc.

References check_validity(), gradient_degree, and gradient_order.

8.10.3.17 void jeod::SphericalHarmonicsGravityControls::set_grad_order (unsigned int *new_grad_order*)

Update the functional gradient order.

Parameters

in	<i>new_grad_order</i>	New desired order
----	-----------------------	-------------------

Definition at line 391 of file spherical_harmonics_gravity_controls.cc.

References check_validity(), and gradient_order.

8.10.3.18 void jeod::SphericalHarmonicsGravityControls::set_order (unsigned int *new_order*)

Update the functional order.

Parameters

in	<i>new_order</i>	New desired order
----	------------------	-------------------

Definition at line 337 of file spherical_harmonics_gravity_controls.cc.

References check_validity(), and order.

8.10.3.19 void jeod::SphericalHarmonicsGravityControls::sum_deltacoeffs (void) [protected],[virtual]

Loop over all of the active gravitational variation effects models and aggregate their changes to the gravity coefficients into the top-level delta-coeffs "bin" for this gravity body.

Definition at line 556 of file spherical_harmonics_gravity_controls.cc.

References jeod::SphericalHarmonicsDeltaControls::active, jeod::SphericalHarmonicsDeltaCoeffs::dC20, jeod::SphericalHarmonicsDeltaControls::degree, jeod::SphericalHarmonicsDeltaCoeffs::delta_Cnm, delta_Cnm, jeod::SphericalHarmonicsGravitySource::delta_coefs, delta_degree, delta_order, jeod::SphericalHarmonicsDeltaCoeffs::delta_Snm, delta_Snm, jeod::SphericalHarmonicsDeltaControls::first_order_only, jeod::SphericalHarmonicsDeltaControls::grav_effect, harmonics_source, jeod::SphericalHarmonicsDeltaControls::order, total_dC20, and var_effects.

Referenced by calc_nonspherical().

8.10.3.20 void jeod::SphericalHarmonicsGravityControls::update_deltacoeffs (void) [protected],[virtual]

Command all of the gravitational variation effects to update themselves.

Definition at line 534 of file spherical_harmonics_gravity_controls.cc.

References jeod::GravityControls::active, jeod::SphericalHarmonicsGravitySource::delta_coefs, harmonics_source, and var_effects.

Referenced by calc_nonspherical().

8.10.4 Friends And Related Function Documentation

8.10.4.1 `void init_attrjeod__SphericalHarmonicsGravityControls () [friend]`

8.10.4.2 `friend class InputProcessor [friend]`

Definition at line 91 of file `spherical_harmonics_gravity_controls.hh`.

8.10.5 Field Documentation

8.10.5.1 `unsigned int jeod::SphericalHarmonicsGravityControls::degree`

Non-spherical degree to be used.

NOTE: this data being public is deprecated and should not be relied upon in future releases. Use the provided accessor methods instead. `trick_units(-)`

Definition at line 152 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`, `check_validity()`, `get_degree()`, `get_degree_order()`, `set_degree()`, and `set_degree_order()`.

8.10.5.2 `double** jeod::SphericalHarmonicsGravityControls::delta_Cnm`

Array for collecting all active normalized real (cosine) variational spherical harmonic coefficients.

`trick_units(-)`

Definition at line 132 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `add_deltacontrol()`, `sum_deltacoeffs()`, and `~SphericalHarmonicsGravityControls()`.

8.10.5.3 `unsigned int jeod::SphericalHarmonicsGravityControls::delta_degree`

Coefficient degree to be used for totaling up all active `delta_coeffs`.

`trick_units(-)`

Definition at line 121 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `add_deltacontrol()`, `sum_deltacoeffs()`, and `~SphericalHarmonicsGravityControls()`.

8.10.5.4 `unsigned int jeod::SphericalHarmonicsGravityControls::delta_order`

Coefficient order to be used for totaling up all active `delta_coeffs`.

`trick_units(-)`

Definition at line 126 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `add_deltacontrol()`, and `sum_deltacoeffs()`.

8.10.5.5 `double** jeod::SphericalHarmonicsGravityControls::delta_Snm`

Array for collecting all active normalized real (sine) variational spherical harmonic coefficients.

`trick_units(-)`

Definition at line 138 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `add_deltacontrol()`, `sum_deltacoeffs()`, and `~SphericalHarmonicsGravityControls()`.

8.10.5.6 unsigned int jeod::SphericalHarmonicsGravityControls::gradient_degree

Non-spherical degree to be used for computing gradient.

NOTE: this data being public is deprecated and should not be relied upon in future releases. Use the provided accessor methods instead.`trick_units(-)`

Definition at line 166 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`, `check_validity()`, `get_grad_degree()`, `get_grad_degree_order()`, `set_grad_degree()`, and `set_grad_degree_order()`.

8.10.5.7 unsigned int jeod::SphericalHarmonicsGravityControls::gradient_order

Non-spherical order to be used for computing gradient.

NOTE: this data being public is deprecated and should not be relied upon in future releases. Use the provided accessor methods instead.`trick_units(-)`

Definition at line 173 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`, `check_validity()`, `get_grad_degree_order()`, `get_grad_order()`, `set_grad_degree_order()`, and `set_grad_order()`.

8.10.5.8 SphericalHarmonicsGravitySource* jeod::SphericalHarmonicsGravityControls::harmonics_source

The [GravitySource](#) pointer from the base class, recast.

Note

Users should not set this data member in the input file.`trick_units(-)`

Definition at line 110 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`, `check_validity()`, `initialize_control()`, `sum_deltacoeffs()`, `update_deltacoeffs()`, and `~SphericalHarmonicsGravityControls()`.

8.10.5.9 bool jeod::SphericalHarmonicsGravityControls::min_radius_warn [protected]

Indicates that the minimum radius threshold has been crossed and that a warning has been issued for such.

This prevents a spew of messages regarding such under-threshold conditions.

Note

Users should not set this data member in the input file unless you wish to disable all such messages.`trick_units(-)`

Definition at line 103 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`.

8.10.5.10 unsigned int jeod::SphericalHarmonicsGravityControls::order

Non-spherical order to be used.

NOTE: this data being public is deprecated and should not be relied upon in future releases. Use the provided accessor methods instead.`trick_units(-)`

Definition at line 159 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`, `check_validity()`, `get_degree_order()`, `get_order()`, `set_degree_order()`, and `set_order()`.

8.10.5.11 double** jeod::SphericalHarmonicsGravityControls::Pnm

Legendre polynomials used to calculate non-spherical attraction.

trick_units(-)

Definition at line 115 of file spherical_harmonics_gravity_controls.hh.

Referenced by calc_nonspherical(), initialize_control(), and ~SphericalHarmonicsGravityControls().

8.10.5.12 double jeod::SphericalHarmonicsGravityControls::total_dC20

delta C20 coefficient for collecting first order effects of all active delta_coeffs.

trick_units(-)

Definition at line 144 of file spherical_harmonics_gravity_controls.hh.

Referenced by calc_nonspherical(), and sum_deltacoeffs().

8.10.5.13 JeodPointerVector<SphericalHarmonicsDeltaControls>::type jeod::SphericalHarmonicsGravityControls::var_effects

List of controls for variational gravity effects like solid-body tides.

trick_io(**)

Definition at line 178 of file spherical_harmonics_gravity_controls.hh.

Referenced by add_deltacontrol(), calc_nonspherical(), SphericalHarmonicsGravityControls(), sum_deltacoeffs(), update_deltacoeffs(), and ~SphericalHarmonicsGravityControls().

The documentation for this class was generated from the following files:

- [spherical_harmonics_gravity_controls.hh](#)
- [spherical_harmonics_calc_nonspherical.cc](#)
- [spherical_harmonics_gravity_controls.cc](#)

8.11 jeod::SphericalHarmonicsGravitySource Class Reference

Models the gravity for a specific planet using spherical harmonics.

```
#include <spherical_harmonics_gravity_source.hh>
```

Inheritance diagram for jeod::SphericalHarmonicsGravitySource:

Public Member Functions

- [SphericalHarmonicsGravitySource](#) ()
SphericalHarmonicsGravitySource constructor.
- [~SphericalHarmonicsGravitySource](#) () override
SphericalHarmonicsGravitySource destructor.
- virtual void [initialize_body](#) (void)

Initialize Gottlieb gravity coefficients.

- int [find_deltacoeff](#) (const [SphericalHarmonicsDeltaCoeffs](#) &delta_coeff) const

Find the given variational gravity effect if already exists.

- void [add_deltacoeff](#) ([SphericalHarmonicsDeltaCoeffsInit](#) &var_init, BaseDynManager &dyn_manager, [SphericalHarmonicsDeltaCoeffs](#) &var_effect)

Add a gravitational variation effect (i.e., a delta coeffs) to the vector of effects.

Data Fields

- double [radius](#)

Spherical harmonics distance scale, typically the planet's mean equatorial radius.

- unsigned int [degree](#)

The degree of the spherical harmonics gravity coefficients.

- unsigned int [order](#)

The order of the spherical harmonics gravity coefficients.

- double ** [Cnm](#)

Normalized real (cosine) spherical harmonic coefficients.

- double ** [Snm](#)

Normalized imaginary (sine) spherical harmonic coefficients.

- bool [tide_free](#)

Is C20 coefficient free of the permanent tide effect?

- double [tide_free_delta](#)

Number to be added to C20 to remove the permanent tide.

- double * [a_by_rad](#)

(Planet radius/vehicle distance)ⁿ

- double * [alpha](#)

Gottlieb coefficient alpha.

- double * [beta](#)

Gottlieb coefficient beta.

- double ** [xi](#)

Gottlieb coefficient xi.

- double ** [eta](#)

Gottlieb coefficient eta.

- double ** [zeta](#)

Gottlieb coefficient zeta.

- double ** [epsilon](#)

Gottlieb coefficient epsilon.

- double * [nrdiag](#)

Gottlieb coefficient nrdiag.

- double * [int_to_double](#)

0 to degree+1 cast as doubles

- JeodPointerVector

< [SphericalHarmonicsDeltaCoeffs](#) >

::type [delta_coeffs](#)

List of all gravity coefficient altering effects such as solid-body tides.

trick_units(−)

Definition at line 141 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.3 double* jeod::SphericalHarmonicsGravitySource::beta

Gottlieb coefficient beta.

trick_units(-)

Definition at line 145 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.4 double jeod::SphericalHarmonicsGravitySource::Cnm**

Normalized real (cosine) spherical harmonic coefficients.

trick_units(-)

Definition at line 117 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), and ~SphericalHarmonicsGravitySource().

8.11.5.5 unsigned int jeod::SphericalHarmonicsGravitySource::degree

The degree of the spherical harmonics gravity coefficients.

trick_units(-)

Definition at line 107 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::check_validity(), jeod::SphericalHarmonicsGravitySource_earth_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), initialize_body(), jeod::SphericalHarmonicsGravityControls::initialize_control(), jeod::SphericalHarmonicsGravityControls::~~SphericalHarmonicsGravityControls(), and ~SphericalHarmonicsGravitySource().

8.11.5.6 JeodPointerVector<SphericalHarmonicsDeltaCoeffs>::type jeod::SphericalHarmonicsGravitySource::delta_coeffs

List of all gravity coefficient altering effects such as solid-body tides.

trick_io(**)

Definition at line 175 of file spherical_harmonics_gravity_source.hh.

Referenced by add_deltacoeff(), find_deltacoeff(), SphericalHarmonicsGravitySource(), jeod::SphericalHarmonicsGravityControls::sum_deltacoeffs(), jeod::SphericalHarmonicsGravityControls::update_deltacoeffs(), and ~SphericalHarmonicsGravitySource().

8.11.5.7 double jeod::SphericalHarmonicsGravitySource::eta**

Gottlieb coefficient eta.

trick_units(-)

Definition at line 153 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.8 double* jeod::SphericalHarmonicsGravitySource::int_to_double

0 to degree+1 cast as doubles

trick_units(-)

Definition at line 169 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.9 double* jeod::SphericalHarmonicsGravitySource::nrdiag

Gottlieb coefficient nrdiag.

trick_units(-)

Definition at line 165 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.10 unsigned int jeod::SphericalHarmonicsGravitySource::order

The order of the spherical harmonics gravity coefficients.

trick_units(-)

Definition at line 112 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::check_validity(), jeod::SphericalHarmonicsGravitySource_earth_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), and jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize().

8.11.5.11 double jeod::SphericalHarmonicsGravitySource::radius

Spherical harmonics distance scale, typically the planet's mean equatorial radius.

trick_units(m)

Definition at line 102 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), jeod::SphericalHarmonicsGravitySource_earth_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_jupiter_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_sun_spherical_default_data::initialize(), and jeod::SphericalHarmonicsSolidBodyTides::update().

8.11.5.12 double jeod::SphericalHarmonicsGravitySource::Snm**

Normalized imaginary (sine) spherical harmonic coefficients.

trick_units(-)

Definition at line 122 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), and ~SphericalHarmonicsGravitySource().

8.11.5.13 bool jeod::SphericalHarmonicsGravitySource::tide_free

Is C20 coefficient free of the permanent tide effect?

trick_units(-)

Definition at line 127 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), and jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize().

8.11.5.14 double jeod::SphericalHarmonicsGravitySource::tide_free_delta

Number to be added to C20 to remove the permanent tide.

trick_units(-)

Definition at line 132 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), and jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize().

8.11.5.15 double jeod::SphericalHarmonicsGravitySource::upsilon**

Gottlieb coefficient ϵ .

trick_units(-)

Definition at line 161 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.16 double jeod::SphericalHarmonicsGravitySource::xi**

Gottlieb coefficient ξ .

trick_units(-)

Definition at line 149 of file spherical_harmonics_gravity_source.hh.

Referenced by `jeod::SphericalHarmonicsGravityControls::calc_nonspherical()`, `initialize_body()`, and `~SphericalHarmonicsGravitySource()`.

8.11.5.17 `double** jeod::SphericalHarmonicsGravitySource::zeta`

Gottlieb coefficient `zeta`.

`trick_units(-)`

Definition at line 157 of file `spherical_harmonics_gravity_source.hh`.

Referenced by `jeod::SphericalHarmonicsGravityControls::calc_nonspherical()`, `initialize_body()`, and `~SphericalHarmonicsGravitySource()`.

8.24.1 Detailed Description

Models solid body tidal effects.

Definition at line 92 of file `spherical_harmonics_solid_body_tides.hh`.

8.24.2 Constructor & Destructor Documentation

8.24.2.1 `jeod::SphericalHarmonicsSolidBodyTides::SphericalHarmonicsSolidBodyTides (void)`

[SphericalHarmonicsSolidBodyTides](#) constructor.

Definition at line 58 of file `spherical_harmonics_solid_body_tides.cc`.

8.24.2.2 `jeod::SphericalHarmonicsSolidBodyTides::~~SphericalHarmonicsSolidBodyTides (void)` [override]

[SphericalHarmonicsSolidBodyTides](#) destructor.

Definition at line 68 of file `spherical_harmonics_solid_body_tides.cc`.

8.24.3 Member Function Documentation

8.24.3.1 `void jeod::SphericalHarmonicsSolidBodyTides::initialize (SphericalHarmonicsDeltaCoeffsInit & var_init, BaseDynManager & dyn_manager)` [override],[virtual]

Initialize the solid body tidal model.

Parameters

<code>in</code>	<code>var_init</code>	Effect init structure
<code>in</code>	<code>dyn_manager</code>	Dynamics manager

Reimplemented from [jeod::SphericalHarmonicsDeltaCoeffs](#).

Definition at line 82 of file `spherical_harmonics_solid_body_tides.cc`.

References [jeod::SphericalHarmonicsTidalEffects::initialize\(\)](#).

8.24.3.2 void jeod::SphericalHarmonicsSolidBodyTides::update (SphericalHarmonicsGravityControls & *controls*)
[override],[virtual]

Update the solid-body tidal delta-coefficients.

Parameters

<code>in</code>	<code>controls</code>	Gravity controls for planet
-----------------	-----------------------	-----------------------------

Reimplemented from [jeod::SphericalHarmonicsDeltaCoeffs](#).

8.27.1 Detailed Description

Models tidal effects as a delta on top of a gravity model.

Definition at line 94 of file `spherical_harmonics_tidal_effects.hh`.

8.27.2 Constructor & Destructor Documentation

8.27.2.1 `jeod::SphericalHarmonicsTidalEffects::SphericalHarmonicsTidalEffects (void)`

[SphericalHarmonicsTidalEffects](#) constructor.

Definition at line 69 of file `spherical_harmonics_tidal_effects.cc`.

8.27.2.2 `jeod::SphericalHarmonicsTidalEffects::~~SphericalHarmonicsTidalEffects (void)` `[override]`

[SphericalHarmonicsTidalEffects](#) destructor.

Definition at line 86 of file `spherical_harmonics_tidal_effects.cc`.

References `jeod::SphericalHarmonicsDeltaCoeffs::degree`, `Knm`, `tidal_bodies`, and `tidal_bodies_inertial`.

8.27.3 Member Function Documentation

8.27.3.1 `void jeod::SphericalHarmonicsTidalEffects::initialize (SphericalHarmonicsDeltaCoeffsInit & gen_var_init, BaseDynManager & dyn_manager)` `[override]`, `[virtual]`

Initialize a [SphericalHarmonicsTidalEffects](#) object.

This method overrides and calls the base class initialize method.

Parameters

<code>in</code>	<code>gen_var_init</code>	Effect init structure
<code>in</code>	<code>dyn_manager</code>	Dynamics manager

Reimplemented from [jeod::SphericalHarmonicsDeltaCoeffs](#).

Definition at line 117 of file `spherical_harmonics_tidal_effects.cc`.

References `jeod::SphericalHarmonicsDeltaCoeffs::degree`, `jeod::SphericalHarmonicsDeltaCoeffs::grav_source`, `jeod::SphericalHarmonicsDeltaCoeffs::initialize()`, `jeod::GravityMessages::invalid_name`, `jeod::GravityMessages::invalid_object`, `jeod::SphericalHarmonicsTidalEffectsInit::k2`, `k2`, `jeod::SphericalHarmonicsTidalEffectsInit::Knm`,

Knm, jeod::SphericalHarmonicsTidalEffectsInit::num_tidal_bodies, num_tidal_bodies, jeod::SphericalHarmonicsDeltaCoeffs::order, jeod::GravitySource::pfix, pfix, tidal_bodies, tidal_bodies_inertial, jeod::SphericalHarmonicsTidalEffectsInit::tidal_body_names, jeod::SphericalHarmonicsTidalEffectsInit::xp, xp, jeod::SphericalHarmonicsTidalEffectsInit::yp, and yp.

Referenced by jeod::SphericalHarmonicsSolidBodyTides::initialize().

8.27.3.2 `void jeod::SphericalHarmonicsTidalEffects::update (SphericalHarmonicsGravityControls & controls)`
`[override],[virtual]`

Pure virtual update method.

Parameters

<code>in</code>	<code>controls</code>	Gravity controls for planet
-----------------	-----------------------	-----------------------------

Reimplemented from [jeod::SphericalHarmonicsDeltaCoeffs](#).

Definition at line 224 of file spherical_harmonics_tidal_effects.cc.

8.27.4 Friends And Related Function Documentation

8.27.4.1 `void init_attrjeod__SphericalHarmonicsTidalEffects ()` `[friend]`

8.27.4.2 `friend class InputProcessor` `[friend]`

Definition at line 96 of file spherical_harmonics_tidal_effects.hh.

8.27.5 Field Documentation

8.27.5.1 `double jeod::SphericalHarmonicsTidalEffects::k2`

The love number.

Only used for a first order tidal effect model.trick_units(-)

Definition at line 115 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize(), and jeod::SphericalHarmonicsSolidBodyTides::update().

8.27.5.2 `double** jeod::SphericalHarmonicsTidalEffects::Knm`

A matrix of love numbers.

Used for higher order (not first-order) tidal effects.trick_units(-)

Definition at line 121 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize(), and ~SphericalHarmonicsTidalEffects().

8.27.5.3 `unsigned int jeod::SphericalHarmonicsTidalEffects::num_tidal_bodies`

The number of tidal bodies named in tidal_bodies.

trick_units(count)

Definition at line 126 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize(), and jeod::SphericalHarmonicsSolidBodyTides::update().

8.27.5.4 RefFrame* jeod::SphericalHarmonicsTidalEffects::pfix [protected]

The planet fixed reference frame of the subject body.

trick_units(-)

Definition at line 144 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize(), and jeod::SphericalHarmonicsSolidBodyTides::update().

8.27.5.5 Planet jeod::SphericalHarmonicsTidalEffects::tidal_bodies** [protected]

The tidal bodies.

Filled out at initialization. Length after init is num_tidal_bodies.trick_units(-)

Definition at line 134 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize(), jeod::SphericalHarmonicsSolidBodyTides::update(), and ~SphericalHarmonicsTidalEffects().

8.27.5.6 RefFrame jeod::SphericalHarmonicsTidalEffects::tidal_bodies_inertial** [protected]

Pointers to the tidal_bodies inertial reference frames.

trick_units(-)

Definition at line 139 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize(), jeod::SphericalHarmonicsSolidBodyTides::update(), and ~SphericalHarmonicsTidalEffects().

8.27.5.7 double jeod::SphericalHarmonicsTidalEffects::xp

Copy of polar motion coefficient xp (from polar motion class).

trick_units(-)

Definition at line 105 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize().

8.27.5.8 double jeod::SphericalHarmonicsTidalEffects::yp

Copy of polar motion coefficient yp (from polar motion class).

trick_units(-)

Definition at line 110 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize().

- [jeod](#)

Namespace jeod.

9.16.1 Detailed Description

Define methods for the GravityInteraction class.

Definition in file [gravity_interaction.cc](#).

9.17 gravity_interaction.hh File Reference

Define the GravityInteraction class, used to represent the gravitational interaction between a DynBody and a set of planetary bodies.

```
#include "utils/container/include/pointer_vector.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
```

Data Structures

- class [jeod::GravityInteraction](#)

Specifies interactions between a vehicle and a set of gravitational bodies.

Namespaces

- [jeod](#)

Namespace jeod.

9.17.1 Detailed Description

Define the GravityInteraction class, used to represent the gravitational interaction between a DynBody and a set of planetary bodies. Note that while each DynBody instance has a GravityInteraction data member, this class is defined as a part of the gravity model rather than the dyn_body model. This is because the coupling between this class and the other parts of the gravity model is much stronger than the coupling between this class and the dyn_body model.

Definition in file [gravity_interaction.hh](#).

9.18 gravity_manager.cc File Reference

Define member functions for the GravityManager class.

```
#include <string>
#include <cstring>
#include <cstdlib>
#include "dynamics/dyn_manager/include/base_dyn_manager.hh"
#include "utils/math/include/matrix3x3.hh"
#include "utils/math/include/vector3.hh"
#include "utils/memory/include/jeod_alloc.hh"
#include "utils/message/include/message_handler.hh"
#include "../include/gravity_manager.hh"
#include "../include/gravity_controls.hh"
#include "../include/gravity_interaction.hh"
#include "../include/gravity_messages.hh"
#include "../include/gravity_source.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.18.1 Detailed Description

Define member functions for the GravityManager class.

Definition in file [gravity_manager.cc](#).

9.19 gravity_manager.hh File Reference

Define the Gravity Manager.

```
#include "utils/container/include/pointer_vector.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
```

Data Structures

- class [jeod::GravityManager](#)

The master gravitational model for a simulation.

Namespaces

- [jeod](#)

Namespace jeod.

9.19.1 Detailed Description

Define the Gravity Manager.

Definition in file [gravity_manager.hh](#).

9.20 gravity_messages.cc File Reference

Implement the class GravityMessages.

```
#include "../include/gravity_messages.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

Macros

- #define [PATH](#) "environment/gravity/"

9.20.1 Detailed Description

Implement the class GravityMessages.

Definition in file [gravity_messages.cc](#).

9.21 gravity_messages.hh File Reference

Define the class GravityMessages, the class that specifies the message IDs used in the gravity model.

```
#include "utils/sim_interface/include/jeod_class.hh"
```

Data Structures

- class [jeod::GravityMessages](#)

Specifies the message IDs used in the gravity model.

Namespaces

- [jeod](#)

Namespace jeod.

9.21.1 Detailed Description

Define the class GravityMessages, the class that specifies the message IDs used in the gravity model.

Definition in file [gravity_messages.hh](#).

9.22 gravity_source.cc File Reference

Define member functions for the GravitySource class.

```
#include <cstdint>
#include "environment/planet/include/planet.hh"
#include "environment/ephemerides/ephem_interface/include/ephem_ref_frame.-
hh"
#include "utils/math/include/vector3.hh"
#include "utils/memory/include/jeod_alloc.hh"
#include "../include/gravity_source.hh"
#include "../include/gravity_integ_frame.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.22.1 Detailed Description

Define member functions for the GravitySource class.

Definition in file [gravity_source.cc](#).

9.23 gravity_source.hh File Reference

Define the gravity body base (pure virtual) class.

```
#include <vector>
#include <string>
#include "environment/ephemerides/ephem_interface/include/class_declarations.-
hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
#include "gravity_integ_frame.hh"
```

Data Structures

- class [jeod::GravitySource](#)

Models the gravity for a specific planet; pure virtual.

Namespaces

- [jeod](#)

Namespace jeod.

9.23.1 Detailed Description

Define the gravity body base (pure virtual) class.

Definition in file [gravity_source.hh](#).

9.37.1 Detailed Description

Define member functions for the SphericalHarmonicsDeltaCoeffs class.

Definition in file [spherical_harmonics_delta_coeffs.cc](#).

9.38 spherical_harmonics_delta_coeffs.hh File Reference

Define the class SphericalHarmonicsDeltaCoeffs, the base class for tidal effects and temporal gravity sub-models.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsDeltaCoeffs](#)

Base class for tidal and temporal gravity models.

Namespaces

- [jeod](#)

Namespace jeod.

9.38.1 Detailed Description

Define the class SphericalHarmonicsDeltaCoeffs, the base class for tidal effects and temporal gravity sub-models.

Definition in file [spherical_harmonics_delta_coeffs.hh](#).

9.39 spherical_harmonics_delta_coeffs_init.cc File Reference

Define member functions for the SphericalHarmonicsDeltaCoeffsInit class.

```
#include <cstdint>
#include "../include/spherical_harmonics_delta_coeffs_init.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.39.1 Detailed Description

Define member functions for the SphericalHarmonicsDeltaCoeffsInit class.

Definition in file [spherical_harmonics_delta_coeffs_init.cc](#).

9.40 spherical_harmonics_delta_coeffs_init.hh File Reference

Define the class SphericalHarmonicsDeltaCoeffsInit, the base initialization class for tidal effects and temporal gravity sub-models.

```
#include "utils/sim_interface/include/jeod_class.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsDeltaCoeffsInit](#)

Initialization data for a [SphericalHarmonicsDeltaCoeffs](#) instance.

Namespaces

- [jeod](#)

Namespace jeod.

9.40.1 Detailed Description

Define the class SphericalHarmonicsDeltaCoeffsInit, the base initialization class for tidal effects and temporal gravity sub-models.

Definition in file [spherical_harmonics_delta_coeffs_init.hh](#).

9.41 spherical_harmonics_delta_controls.cc File Reference

Define member functions for the SphericalHarmonicsDeltaControls class.

```
#include <cstdint>
#include "../include/spherical_harmonics_delta_controls.hh"
#include "../include/spherical_harmonics_delta_coeffs.hh"
#include "../include/spherical_harmonics_gravity_source.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.41.1 Detailed Description

Define member functions for the SphericalHarmonicsDeltaControls class.

Definition in file [spherical_harmonics_delta_controls.cc](#).

9.42 spherical_harmonics_delta_controls.hh File Reference

Define the gravity controls for the variational gravity models such as solid-body tides.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsDeltaControls](#)

Provides controls for how a variational model affects a vehicle.

Namespaces

- [jeod](#)

Namespace jeod.

9.42.1 Detailed Description

Define the gravity controls for the variational gravity models such as solid-body tides.

Definition in file [spherical_harmonics_delta_controls.hh](#).

9.43 spherical_harmonics_gravity_controls.cc File Reference

Define member functions for the SphericalHarmonicsGravityControls class.

```
#include <cmath>
#include <cstdint>
#include "utils/memory/include/jeod_alloc.hh"
#include "utils/message/include/message_handler.hh"

Namespace jeod.

9.43.1 Detailed Description

Define member functions for the SphericalHarmonicsGravityControls class.

Definition in file [spherical_harmonics_gravity_controls.cc](#).

9.44 spherical_harmonics_gravity_controls.hh File Reference

Define the gravity controls.

```
#include "utils/container/include/pointer_vector.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "gravity_controls.hh"
#include "class_declarations.hh"
#include "spherical_harmonics_gravity_source.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsGravityControls](#)

Specifies whether and how a [SphericalHarmonicsGravitySource](#) affects a vehicle.

Namespaces

- [jeod](#)

Namespace jeod.

9.44.1 Detailed Description

Define the gravity controls.

Definition in file [spherical_harmonics_gravity_controls.hh](#).

9.45 spherical_harmonics_gravity_source.cc File Reference

Define member functions for the SphericalHarmonicsGravitySource class.

```
#include <cmath>
#include <cstdint>
#include <cstring>
#include <typeinfo>
#include "dynamics/dyn_manager/include/base_dyn_manager.hh"

#include "../include/spherical_harmonics_gravity_controls.hh"
#include "../include/spherical_harmonics_gravity_source.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.48.1 Detailed Description

Define member functions for the SphericalHarmonicsSolidBodyTides class.

Definition in file [spherical_harmonics_solid_body_tides.cc](#).

9.49 spherical_harmonics_solid_body_tides.hh File Reference

Define the SphericalHarmonicsSolidBodyTides class, which models solid-body tidal effects.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "spherical_harmonics_tidal_effects.hh"
#include "class_declarations.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsSolidBodyTides](#)
Models solid body tidal effects.

Namespaces

- [jeod](#)
Namespace jeod.

9.49.1 Detailed Description

Define the SphericalHarmonicsSolidBodyTides class, which models solid-body tidal effects. SphericalHarmonicsSolidBodyTides inherits directly from the SphericalHarmonicsTidalEffects class.

Definition in file [spherical_harmonics_solid_body_tides.hh](#).

9.50 spherical_harmonics_solid_body_tides_init.cc File Reference

Define member functions for the SphericalHarmonicsSolidBodyTidesInit class.

```
#include "utils/memory/include/jeod_alloc.hh"
#include "../include/spherical_harmonics_solid_body_tides_init.hh"
```

Namespaces

- [jeod](#)
Namespace jeod.

9.50.1 Detailed Description

Define member functions for the SphericalHarmonicsSolidBodyTidesInit class.

Definition in file [spherical_harmonics_solid_body_tides_init.cc](#).

9.51 spherical_harmonics_solid_body_tides_init.hh File Reference

Define the SphericalHarmonicsSolidBodyTidesInit class, which is the initialization class for the solid body tides model.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "spherical_harmonics_tidal_effects_init.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsSolidBodyTidesInit](#)
Initializes a solid body tides model.

Namespaces

- [jeod](#)

Namespace jeod.

9.51.1 Detailed Description

Define the SphericalHarmonicsSolidBodyTidesInit class, which is the initialization class for the solid body tides model.

Definition in file [spherical_harmonics_solid_body_tides_init.hh](#).

9.52 spherical_harmonics_tidal_effects.cc File Reference

Define member functions for the SphericalHarmonicsTidalEffects class.

```
#include <cstddef>
#include "dynamics/dyn_manager/include/base_dyn_manager.hh"
#include "environment/planet/include/planet.hh"
#include "utils/memory/include/jeod_alloc.hh"
#include "utils/message/include/message_handler.hh"

#include "../include/spherical_harmonics_gravity_source.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.52.1 Detailed Description

Define member functions for the SphericalHarmonicsTidalEffects class.

Definition in file [spherical_harmonics_tidal_effects.cc](#).

9.53 spherical_harmonics_tidal_effects.hh File Reference

Define the class SphericalHarmonicsTidalEffects, which is the base class for solid-body and ocean tidal effects.

```
#include "environment/planet/include/class_declarations.hh"
#include "utils/ref_frames/include/class_declarations.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "spherical_harmonics_delta_coeffs.hh"
#include "class_declarations.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsTidalEffects](#)
Models tidal effects as a delta on top of a gravity model.

Namespaces

- [jeod](#)
Namespace jeod.

9.53.1 Detailed Description

Define the class SphericalHarmonicsTidalEffects, which is the base class for solid-body and ocean tidal effects. SphericalHarmonicsTidalEffects inherits directly from the SphericalHarmonicsDeltaCoeffs class.

Definition in file [spherical_harmonics_tidal_effects.hh](#).

9.54 spherical_harmonics_tidal_effects_init.cc File Reference

Define member functions for the SphericalHarmonicsTidalEffectsInit class.

```
#include <cstdint>
#include "../include/spherical_harmonics_tidal_effects_init.hh"
```

Namespaces

- [jeod](#)
Namespace jeod.

9.54.1 Detailed Description

Define member functions for the SphericalHarmonicsTidalEffectsInit class.

Definition in file [spherical_harmonics_tidal_effects_init.cc](#).

9.55 spherical_harmonics_tidal_effects_init.hh File Reference

Define the SphericalHarmonicsTidalEffectsInit class, the initialization class for tidal effects models.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "spherical_harmonics_delta_coeffs_init.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsTidalEffectsInit](#)
Initializes a tidal gravity model.

Namespaces

- [jeod](#)

Namespace jeod.

9.55.1 Detailed Description

Define the SphericalHarmonicsTidalEffectsInit class, the initialization class for tidal effects models.

Definition in file [spherical_harmonics_tidal_effects_init.hh](#).

9.56 sun_spherical.cc File Reference
