Chapter 4

Data Structure Index

4.1 Data Structures

Here are the data structures with brief descriptions:

er7_utils::DoubleTwoDArray	
2D array, specialized for doubles	57
jeod::GaussJacksonCoefficientsPair	
Contains a summed Adams and Gauss-Jackson coefficient pair	58
jeod::GaussJacksonCoeffs	
Contains the Gauss-Jackson predictor and corrector coefficients	62
jeod::GaussJacksonConfig	
Contains Gauss-Jackson configuration data	65
jeod::GaussJacksonFirstOrderODEIntegrator	
Integrates a first order ODE using the summed Adams technique that is embedded within the	
Gauss-Jackson technique	68
jeod::GaussJacksonGeneralizedDerivSecondOrderODEIntegrator	
Integrates a generalized derivative second order ODE using Gauss-Jackson	71
jeod::GaussJacksonIntegrationControls	
IntegrationControls specialized for Gauss-Jackson integration	74
jeod::GaussJacksonIntegratorBase < State, Primer >	
Base template class for integrating state via the Gauss-Jackson technique	83
jeod::GaussJacksonIntegratorConstructor	
Create state and time integrators that propagate using Gauss-Jackson	10
jeod::GaussJacksonOneState	
Essentially just a double *	11
jeod::GaussJacksonRationalCoefficients	
Contains a set of Adams or Stormer-Cowell coefficients	113
jeod::GaussJacksonSimpleSecondOrderODEIntegrator	
Integrates a simple second order ODE using the Gauss-Jackson technique	110
jeod::GaussJacksonStateMachine	
Guides the behavior of the Gauss-Jackson integration process via a finite state machine	120
jeod::GaussJacksonTwoState	
Essentially just std::pair <double*></double*>	130
jeod::GeneralizedSecondOrderODETechnique	
Enumerates the integration schemes, generalized Cartesian or Lie group integration, and pro-	
vides simple utilities that work with this	133
jeod::IntegrationMessages	
Declares messages associated with the integration test model	13
jeod::JeodIntegrationGroup	
A JeodIntegrationGroup integrates the state of a set of objects over time	13
jeod::JeodIntegrationGroupOwner	
The abstract class IntegrationGroupOwner contains an IntegrationGroup	144

8 Data Structure Index

jeod::JeodIntegrationTime	
The class JeodIntegrationTime adds the concepts of timestamping and notification of changes in the nature of time to the ER7 numerical utilities TimeInterface class	145
jeod::LsodeControlDataInterface	
Specifies controls for an LSODE integrator	148
jeod::LsodeDataArrays	
The data arrays	155
jeod::LsodeDataJacobianPrep Data associated with the method DPREPJ	159
jeod::LsodeDataStode	
The data associated with method Dstode	161
jeod::LsodeFirstOrderODEIntegrator Jeod-compatible version of the Livermore ODE solver, LSODE	163
jeod::LsodeGeneralizedDerivSecondOrderODEIntegrator	
JEOD-compatible version of the Livermore ODE solver, LSODE, capable of integrating second-order ODEs	179
jeod::LsodeIntegrationControls	
Contains controls for an LSODE integrator	180
jeod::LsodeIntegratorConstructor	
Create state and time integrators that propagate using standard Lsode	182
jeod::LsodeSecondOrderODEIntegrator	
JEOD-compatible version of the Livermore ODE solver, LSODE, capable of integrating second-	
order ODEs	185
jeod::LsodeSimpleSecondOrderODEIntegrator	
JEOD-compatible version of the Livermore ODE solver, LSODE, capable of integrating second-	
order ODEs	187
jeod::Restartable2DSecondOrderIntegrator	
Integrates a second order ODE in two dimensional space, $d^2x/dt^2 = a(x,t)$, where x is a two-vector	189
jeod::RestartableFirstOrderODEIntegrator< size >	
A RestartableFirstOrderODEIntegrator is-a RestartableStateIntegrator that manages an er7utils::FirstOrderODEIntegrator	192
jeod::RestartableGeneralizedDerivSecondOrderODEIntegrator< position_size, velocity_size, Deriv-	
Functions >	
A RestartableGeneralizedDerivSecondOrderODEIntegrator is-a RestartableStateIntegrator that manages the integrator for a generalized second order ODE problem, one in which the time derivative of the generalized position is some function of the generalized position and the	
generalized velocity	195
jeod::RestartableGeneralizedStepSecondOrderODEIntegrator< position_size, velocity_size, Step-Functions >	
A RestartableGeneralizedStepSecondOrderODEIntegrator is-a RestartableStateIntegrator that	
manages the integrator for a generalized second order ODE problem, one in which the time	
derivative of the generalized position is some function of the generalized position and the	
generalized velocity	198
jeod::RestartableScalarFirstOrderODEIntegrator	
A RestartableScalarFirstOrderODEIntegrator integrates a first order ODE, $dx/dt = v(x,t)$, where x	
is a scalar	202
jeod::RestartableSecondOrderODEIntegrator	
A RestartableSecondOrderODEIntegrator is-a RestartableStateIntegrator that manages the in-	
tegrator for a second order ODE problem	205
jeod::RestartableSimpleSecondOrderODEIntegrator< size >	
A RestartableSimpleSecondOrderODEIntegrator is-a RestartableSecondOrderODEIntegrator	
that manages the integrator for a simple second order ODE problem, one in which the time	007
derivative of the generalized position is the generalized velocity	207
jeod::RestartableSO3SecondOrderODEIntegrator	
A RestartableSO3SecondOrderODEIntegrator integrates a generalized second order ODE that	000
describes rotation in three space	209

4.1 Data Structures 9

jeod::RestartableStateIntegrator< IntegratorType >	
A RestartableStateIntegrator establishes the basic capabilities needed to make a state integrator	
a managed resource	213
jeod::RestartableT3SecondOrderODEIntegrator	
A RestartableT3SecondOrderODEIntegrator integrates a second order ODE in three space,	
$d^2x/dt^2 = a(x,t)$, where x is a three-vector	218
jeod::TimeChangeSubscriber	
A TimeChangeSubscriber is some object that wants to be notified of changes in the nature of time	222
er7_utils::TwoDArray< T >	
RAII template class that implements a rectangular two dimensional array	223

10 **Data Structure Index**

Chapter 5

File Index

5.1 File List

Here is a list of all files with brief descriptions:

gauss_jackson_coefficients_pair.cc	
Defines member functions for the class GaussJacksonCoefficientsPair	233
gauss_jackson_coefficients_pair.hh	
Defines the class GaussJacksonCoefficientsPair, which contains summed Adams and Gauss	
Jackson coefficient pair	233
gauss_jackson_coeffs.cc	
Defines member functions for the class GaussJacksonCoeffs	234
gauss_jackson_coeffs.hh	
Defines the class GaussJacksonCoeffs, which contains the Gauss-Jackson predictor and cor-	
rector coefficients	234
gauss_jackson_config.cc	
Defines member functions for the class GaussJacksonIntegratorConstructor	235
gauss_jackson_config.hh	
Defines the class Gauss-Jackson Config, which specifies Gauss-Jackson configuration data	235
gauss_jackson_first_order_ode_integrator.hh	
Defines the class GaussJacksonFirstOrderODEIntegrator, which integrates a first order ODE	000
using the summed Adams technique	236
gauss_jackson_generalized_second_order_ode_integrator.cc	
Defines member functions for the class GaussJacksonGeneralizedDerivSecondOrderODE-	000
Integrator	236
gauss_jackson_generalized_second_order_ode_integrator.hh Defines the class GaussJacksonGeneralizedDerivSecondOrderODEIntegrator, which integrates	
a generalized derivative second order ODE using Gauss-Jackson	237

Files

• file generalized_second_order_ode_technique.hh

Define the static class GeneralizedSecondOrderODETechnique.

· file integration messages.hh

Define the class IntegrationMessages, the class that specifies the message IDs used in the integration model.

· file jeod_integration_group.hh

Define the extensible class IntegrationGroup, an instance of which is responsible for integrating the states of a set of DynBody objects.

· file jeod_integration_time.hh

Define the class JeodIntegrationTime.

• file restartable_2d_second_order_integrator.hh

Defines the class Restartable2DSecondOrderODEIntegrator.

• file restartable_state_integrator.hh

Define classes that encapsulate the construction, destruction, checkpointing, and restarting of state integrators.

file restartable_state_integrator_templates.hh

Define template classes that encapsulate the construction, destruction, checkpointing, and restarting of state integrators

file time_change_subscriber.hh

Define the class TimeChangeSubscriber.

• file generalized_second_order_ode_technique.cc

Define class GeneralizedSecondOrderODETechnique methods.

· file integration_messages.cc

Implement the class IntegrationMessages.

• file jeod_integration_group.cc

Define JeodIntegrationGroup methods.

· file jeod_integration_time.cc

 $Define\ JeodIntegration Time\ methods.$

6.4 GaussJackson 19

6.4 GaussJackson

Files

· file gauss jackson coefficients pair.hh

Defines the class Gauss-JacksonCoefficientsPair, which contains summed Adams and Gauss-Jackson coefficient pair.

· file gauss jackson coeffs.hh

Defines the class GaussJacksonCoeffs, which contains the Gauss-Jackson predictor and corrector coefficients.

· file gauss_jackson_config.hh

Defines the class Gauss-Jackson Config, which specifies Gauss-Jackson configuration data.

· file gauss jackson first order ode integrator.hh

Defines the class GaussJacksonFirstOrderODEIntegrator, which integrates a first order ODE using the summed Adams technique.

· file gauss jackson generalized second order ode integrator.hh

Defines the class GaussJacksonGeneralizedDerivSecondOrderODEIntegrator, which integrates a generalized derivative second order ODE using Gauss-Jackson.

· file gauss jackson integration controls.hh

Defines the class Gauss-Jackson Integration Controls, which controls Gauss-Jackson integration process.

file gauss_jackson_integrator_base.hh

Defines the template class Gauss-Jackson Integrator Base, which provides the basis for Gauss-Jackson integration.

file gauss_jackson_integrator_base_first.hh

Defines the template specializations of GaussJacksonIntegratorBase for a first order ODE.

• file gauss_jackson_integrator_base_second.hh

Defines the template specializations of GaussJacksonIntegratorBase for a first order ODE.

file gauss_jackson_integrator_constructor.hh

Defines the class GaussJacksonIntegratorConstructor, which constructs integrators that use Gauss-Jackson integration.

• file gauss_jackson_one_state.hh

Defines the class GaussJacksonOneState, which contains a double* pointer.

• file gauss_jackson_rational_coeffs.hh

Defines the class GaussJacksonRationalCoefficients, which contains a set of Adams or Stormer-Cowell coefficients.

• file gauss_jackson_simple_second_order_ode_integrator.hh

Defines the class GaussJacksonSimpleSecondOrderODEIntegrator, which integrates a simple second order ODE using Gauss-Jackson.

file gauss_jackson_state_machine.hh

Defines the class GaussJacksonStateMachine, which guides the Gauss-Jackson integration process.

• file gauss_jackson_two_state.hh

Defines the class GaussJacksonTwoState, which contains a pair of double* pointers.

· file two d array.hh

Defines the template class er7_utils::TwoDArray, which implements an RAII rectangular 2D array.

file gauss_jackson_coefficients_pair.cc

Defines member functions for the class GaussJacksonCoefficientsPair.

• file gauss_jackson_coeffs.cc

Defines member functions for the class GaussJacksonCoeffs.

file gauss_jackson_config.cc

Defines member functions for the class GaussJacksonIntegratorConstructor.

• file gauss_jackson_generalized_second_order_ode_integrator.cc

Defines member functions for the class GaussJacksonGeneralizedDerivSecondOrderODEIntegrator.

file gauss_jackson_integration_controls.cc

Defines member functions for the class GaussJacksonIntegrationControls.

file gauss_jackson_integrator_constructor.cc

Defines member functions for the class GaussJacksonIntegratorConstructor.

• file gauss_jackson_rational_coeffs.cc

Defines member functions for the class GaussJacksonRationalCoefficients.

• file gauss_jackson_state_machine.cc

Defines member functions for the class GaussJacksonStateMachine.

6.4.1 Detailed Description

6.5 Lsode

Files

· file lsode_control_data_interface.hh

Define the class LsodeControlDataInterface.

· file Isode data classes.hh

Define LSODE classes that contain just data members.

• file lsode_first_order_ode_integrator.hh

Define the class LsodeFirstOrderODEIntegrator, the Jeod-compatible version of the Livermore ODE solver, LSODE.

file lsode_generalized_second_order_ode_integrator.hh

Define the class LsodeGeneralizedDerivSecondOrderODEIntegrator.

file lsode_integration_controls.hh

Define the class LsodeIntegrationControls.

· file Isode integrator constructor.hh

Define the class LsodeIntegratorConstructor, the class that constructs the integration controls and the integrators for the LSODE method.

file lsode_second_order_ode_integrator.hh

Define the class LsodeSecondOrderODEIntegrator.

file lsode_simple_second_order_ode_integrator.hh

Define the class LsodeSimpleSecondOrderODEIntegrator.

• file lsode_control_data_interface.cc

Define member functions for the class LsodeControlDataInterface.

file lsode_data_classes.cc

Define member functions for the data-grouping classes specified in Isode_data_classes.

file lsode_first_order_ode_integrator__integrator.cc

Define member functions for the class LsodeFirstOrderODEIntegrator.

• file lsode_first_order_ode_integrator__manager.cc

Define member functions for the class LsodeFirstOrderODEIntegrator.

• file lsode_first_order_ode_integrator__support.cc

Define member functions for the class LsodeFirstOrderODEIntegrator.

file lsode_first_order_ode_integrator__utility.cc

Define member functions for the class LsodeFirstOrderODEIntegrator.

• file lsode_generalized_second_order_ode_integrator.cc

Define member functions for the class LsodeGeneralizedDerivSecondOrderODEIntegrator.

file lsode_integration_controls.cc

Define the methods for the class LsodeIntegrationControls.

file lsode_integrator_constructor.cc

Define the methods in the class LsodeIntegratorConstructor.

file lsode_second_order_ode_integrator.cc

Define member functions for the class LsodeSecondOrderODEIntegrator.

• file lsode_simple_second_order_ode_integrator.cc

Define member functions for the class LsodeSimpleSecondOrderODEIntegrator.

Functions

jeod::LsodeControlDataInterface::LsodeControlDataInterface (void)

constructor

jeod::LsodeControlDataInterface::LsodeControlDataInterface (const LsodeControlDataInterface &src)

copy constructor

void jeod::LsodeControlDataInterface::check_interface_data ()

verifies that the input data has legal values.

void jeod::LsodeControlDataInterface::allocate_arrays ()

allocates space for vector-populated data to allow for restart

• void jeod::LsodeControlDataInterface::destroy_allocated_arrays ()

De-allocates allocated array.

void jeod::LsodeControlDataInterface::set_rel_tol (int index, double value)

set values from external

- void jeod::LsodeControlDataInterface::set_abs_tol (int index, double value)
- jeod::LsodeDataJacobianPrep::LsodeDataJacobianPrep (void)

constructor

jeod::LsodeDataStode (void)

constructor

jeod::LsodeDataArrays::LsodeDataArrays (void)

constructor

 void jeod::LsodeDataArrays::allocate_arrays (unsigned int num_odes, LsodeControlDataInterface::Corrector-Method corrector_method)

Allocates memory for the variable size arrays.

void jeod::LsodeDataArrays::destroy_allocated_arrays ()

Allows for refactoring and reallocation of newly sized arrays.

void jeod::LsodeFirstOrderODEIntegrator::integrator_core ()

integrator_core provides the front-end to all of the integrator_*i methods, which together perform one step of the integration of an initial value problem for a system of ordinary differential equations.

• void jeod::LsodeFirstOrderODEIntegrator::integrator_reset_method_coeffs ()

Sets/resets the method_coeffs_current array.

void jeod::LsodeFirstOrderODEIntegrator::integrator test stepsize change ()

Tests h against old h.

void jeod::LsodeFirstOrderODEIntegrator::integrator reset yh ()

Resets history arrays and time-step.

void jeod::LsodeFirstOrderODEIntegrator::integrator_predict ()

This section computes the predicted values by multiplying the history array by the Pascal Triangle matrix.

void jeod::LsodeFirstOrderODEIntegrator::integrator reset iteration loop part1 ()

This method resets the iteration loop to the values generated by the integrator_predict method, which populated history[*][0].

void jeod::LsodeFirstOrderODEIntegrator::integrator_reset_iteration_loop_part2 ()

This code follows part 1 after the break-out to get to the external calls, and completes the reset of the integration iteration loop.

void jeod::LsodeFirstOrderODEIntegrator::integrator_corrector_iteration ()

Keeps looping through the iterations until convergence or failure.

void jeod::LsodeFirstOrderODEIntegrator::integrator corrector failed part1 ()

The corrector iteration failed to converge.

void jeod::LsodeFirstOrderODEIntegrator::integrator_corrector_failed_part2 ()

Retracts the history array in the case that the correction iteration failed to converge with either functional iteration or with an up-to-date Jacobian.

void jeod::LsodeFirstOrderODEIntegrator::integrator corrector converged ()

Starts the processing of a converged iteration.

void jeod::LsodeFirstOrderODEIntegrator::integrator_error_test_failed ()

Restores the history array following the failure of the corrector for exceeding local error bounds.

void jeod::LsodeFirstOrderODEIntegrator::integrator compute new order prep ()

The first steps in computing whether the order of the integrator should be changed.

void jeod::LsodeFirstOrderODEIntegrator::integrator_compute_new_order ()

Computes the step-size scaling factors that will result once it is determined what happens to the order at the next step.

- void jeod::LsodeFirstOrderODEIntegrator::integrator compute new order check step error ()
- void jeod::LsodeFirstOrderODEIntegrator::integrator set new order ()

Sets the new order and the step-ratio for the next step - or the current step if redoing it.

void jeod::LsodeFirstOrderODEIntegrator::integrator_fail_reset_order_1_part1 ()

Repopulates the y-array from history, recomputes the original first derivatives, sets the order back to 1, and reduces the step size by a factor of 10.

void jeod::LsodeFirstOrderODEIntegrator::integrator_fail_reset_order_1_part2 ()

Continue reset, with derivatives now at hand.

• void jeod::LsodeFirstOrderODEIntegrator::integrator_wrapup ()

Wraps up the completion of the integrator.

void jeod::LsodeFirstOrderODEIntegrator::integrator terminate ()

this is the only succesful path back from integrator to manager.

• er7_utils::IntegratorResult jeod::LsodeFirstOrderODEIntegrator::integrate (double dyn_dt, unsigned int target_stage, double const *y_dot, double *y) override

Propagate state via Lsode's method.

void jeod::LsodeFirstOrderODEIntegrator::process_entry_point_cycle_start ()

The code block from the main integrate routine for re_entry_point=CycleStartFinish.

void jeod::LsodeFirstOrderODEIntegrator::manager initialize calculation part1 ()

Sets the values for the case with calculation_phase = 1.

- void jeod::LsodeFirstOrderODEIntegrator::manager initialize calculation part2 ()
- int jeod::LsodeFirstOrderODEIntegrator::manager_check_stop_conditions ()

verifies whether the convergence conditions have been met to end the cycle.

void jeod::LsodeFirstOrderODEIntegrator::manager_integration_loop_part1 ()

The iteration loop for the integration process.

- void jeod::LsodeFirstOrderODEIntegrator::manager_integration_loop_part2 ()
- void jeod::LsodeFirstOrderODEIntegrator::manager_integration_loop_part3 ()
- void jeod::LsodeFirstOrderODEIntegrator::reset_integrator () override

Resets the integrator when the timestep changes or when identified as needing a reset.

- void jeod::LsodeFirstOrderODEIntegrator::manager_set_calculation_phase_eq_2_reload ()
- void jeod::LsodeFirstOrderODEIntegrator::calculate_epsilon ()

Identify the smallest double precision value, epsilon, such that the computer can distinguish (1+epsilon) from 1.

• void jeod::LsodeFirstOrderODEIntegrator::calculate integration coefficients ()

Modified from original DCFODE subroutine.

void jeod::LsodeFirstOrderODEIntegrator::interpolate y ()

Interpolates the zeroth-derivative of y Adapted from subroutine DINTDY, which was a general method for interpolating the K-th derivative of the dependent variable vector, y.

void jeod::LsodeFirstOrderODEIntegrator::jacobian_prep_init ()

Modified from DPREPJ.

- bool jeod::LsodeFirstOrderODEIntegrator::jacobian_prep_loop()
- bool jeod::LsodeFirstOrderODEIntegrator::jacobian_prep_wrap_up ()
- void jeod::LsodeFirstOrderODEIntegrator::linear_chord_iteration ()

Modified from DSOLSY.

- void jeod::LsodeFirstOrderODEIntegrator::load_ew_values ()
- jeod::LsodeFirstOrderODEIntegrator::LsodeFirstOrderODEIntegrator (void)

LsodeFirstOrderODEIntegrator default constructor.

• jeod::LsodeFirstOrderODEIntegrator::LsodeFirstOrderODEIntegrator (const LsodeControlDataInterface &data in, er7 utils::IntegrationControls &controls, unsigned int size)

LsodeFirstOrderODEIntegrator non-default constructor.

jeod::LsodeFirstOrderODEIntegrator::~LsodeFirstOrderODEIntegrator () override

LsodeFirstOrderODEIntegrator destructor.

void jeod::LsodeFirstOrderODEIntegrator::update control data ()

Gets the control data from where it can be populated in the constructor and verifies that the input control parameters are not out of sensible range.

LsodeFirstOrderODEIntegrator * jeod::LsodeFirstOrderODEIntegrator::create copy () const override

Create a copy of 'this' LsodeFirstOrderODEIntegrator object.

double jeod::LsodeFirstOrderODEIntegrator::magnitude_of_weighted_array (const double *v)

returns the RMS value of {V dot W}, where V and W are N-vectors.

double jeod::LsodeFirstOrderODEIntegrator::magnitude_of_weighted_array (unsigned int ix, double **v)

returns RMS value of v[*][index]

int jeod::LsodeFirstOrderODEIntegrator::gauss elim factor ()

Factors a double array (arrays.lin_alg) by Gaussian elimination.

void jeod::LsodeFirstOrderODEIntegrator::linear solver ()

Solves the equation Y' = A Y, with A = arrays.lin_alg.

unsigned int jeod::LsodeFirstOrderODEIntegrator::index_of_max_magnitude (unsigned int num_points, double **mx, int starting_ix)

Modified version of IDAMAX.

• void jeod::LsodeFirstOrderODEIntegrator::load_derivatives (double *derivs)

Load the externally generated derivative values (incoming as y_dot)i into the array derivs.

 jeod::LsodeGeneralizedDerivSecondOrderODEIntegrator::LsodeGeneralizedDerivSecondOrderODE-Integrator (void)

 $Lso de Generalized Deriv Second Order ODE Integrator\ default\ constructor.$

• jeod::LsodeGeneralizedDerivSecondOrderODEIntegrator::LsodeGeneralizedDerivSecondOrderODE-Integrator (const LsodeControlDataInterface &data_in, er7_utils::IntegrationControls &controls, const er7_utils::GeneralizedPositionDerivativeFunctions &deriv_funs, unsigned int position_size, unsigned int velocity_size)

non-default constructor

• jeod::LsodeGeneralizedDerivSecondOrderODEIntegrator::LsodeGeneralizedDerivSecondOrderODEIntegrator (const LsodeGeneralizedDerivSecondOrderODEIntegrator &src)

LsodeGeneralizedDerivSecondOrderODEIntegrator copy constructor.

 LsodeGeneralizedDerivSecondOrderODEIntegrator * jeod::LsodeGeneralizedDerivSecondOrderODE-Integrator::create_copy () const override

Clone a LsodeGeneralizedDerivSecondOrderODEIntegrator.

• jeod::LsodeGeneralizedDerivSecondOrderODEIntegrator::~LsodeGeneralizedDerivSecondOrderODE-Integrator () override

LsodeGeneralizedDerivSecondOrderODEIntegrator destructor.

• er7_utils::IntegratorResult jeod::LsodeGeneralizedDerivSecondOrderODEIntegrator::integrate (double dyn_dt, unsigned int target_stage, double const *accel, double *velocity, double *position) override

Propagate state via Lsode's method.

jeod::LsodeIntegrationControls::LsodeIntegrationControls (void)

LsodeIntegrationControls default constructor.

- jeod::LsodeIntegrationControls::LsodeIntegrationControls (unsigned int num_stages)
- LsodeIntegrationControls * jeod::LsodeIntegrationControls::create copy () const override

Create a copy of 'this' StandardIntegrationControls object.

• unsigned int jeod::LsodeIntegrationControls::integrate (double start_time, double sim_dt, er7_utils::Time-Interface &time_interface, er7_utils::IntegratorInterface &integ_interface, er7_utils::BaseIntegrationGroup &integ_group) override

Perform one step of the integration process.

- jeod::LsodeIntegratorConstructor::LsodeIntegratorConstructor (const LsodeIntegratorConstructor &src)
- · static

er7_utils::IntegratorConstructor * jeod::LsodeIntegratorConstructor::create_constructor (void)

Named constructor; create an LsodeIntegratorConstructor instance.

er7_utils::IntegratorConstructor * jeod::LsodeIntegratorConstructor::create_copy (void) const override
 Create a duplicate of the constructor.

 er7_utils::IntegrationControls * jeod::LsodeIntegratorConstructor::create_integration_controls (void) const override

Create an integration controls that guides the Lsode integration process.

 er7_utils::FirstOrderODEIntegrator * jeod::LsodeIntegratorConstructor::create_first_order_ode_integrator (unsigned int size, er7 utils::IntegrationControls &controls) const override

Create an Lsode state integrator for a first order ODE.

er7_utils::SecondOrderODEIntegrator * jeod::LsodeIntegratorConstructor::create_second_order_ode_-integrator (unsigned int size, er7_utils::IntegrationControls &controls) const override

Create an Lsode state integrator for a simple second order ODE.

er7_utils::SecondOrderODEIntegrator * jeod::LsodeIntegratorConstructor::create_generalized_deriv_second_order_ode_integrator (unsigned int position_size, unsigned int velocity_size, const er7_utils::GeneralizedPositionDerivativeFunctions &deriv funs, er7_utils::IntegrationControls &controls) const override

Create an Lsode state integrator for a generalized second order ODE where generalized position is advanced with the use of the position derivative function.

• jeod::LsodeSecondOrderODEIntegrator::LsodeSecondOrderODEIntegrator (void)

LsodeSecondOrderODEIntegrator default constructor.

 jeod::LsodeSecondOrderODEIntegrator::LsodeSecondOrderODEIntegrator (const LsodeControlData-Interface &data_in, er7_utils::IntegrationControls &controls, unsigned int size)

LsodeSecondOrderODEIntegrator non-default constructor.

- jeod::LsodeSecondOrderODEIntegrator::LsodeSecondOrderODEIntegrator (const LsodeControlData-Interface &data_in, er7_utils::IntegrationControls &controls, const er7_utils::GeneralizedPositionDerivative-Functions &deriv_funs, unsigned int position_size, unsigned int velocity_size)
- $\bullet \ jeod:: Lsode Second Order ODE Integrator:: \sim Lsode Second Order ODE Integrator \ () \ override \\$

LsodeSecondOrderODEIntegrator destructor.

• jeod::LsodeSimpleSecondOrderODEIntegrator::LsodeSimpleSecondOrderODEIntegrator (void)

LsodeSimpleSecondOrderODEIntegrator default constructor.

 jeod::LsodeSimpleSecondOrderODEIntegrator::LsodeSimpleSecondOrderODEIntegrator (const Lsode-ControlDataInterface &data_in, er7_utils::IntegrationControls &controls, unsigned int size)

LsodeSimpleSecondOrderODEIntegrator non-default constructor.

- LsodeSimpleSecondOrderODEIntegrator * jeod::LsodeSimpleSecondOrderODEIntegrator::create_copy () const override
- er7_utils::IntegratorResult jeod::LsodeSimpleSecondOrderODEIntegrator::integrate (double dyn_dt, unsigned int target_stage, double const *accel, double *velocity, double *position) override

Propagate state via Lsode's method.

6.5.1 Detailed Description

6.5.2 Function Documentation

6.5.2.1 void LsodeDataArrays::allocate_arrays (unsigned int num_odes, LsodeControlDataInterface::Corrector-Method corrector_method)

Allocates memory for the variable size arrays.

Definition at line 106 of file Isode_data_classes.cc.

References jeod::LsodeDataArrays::accum_correction, jeod::LsodeDataArrays::allocated, jeod::LsodeDataArrays::error_weight, jeod::LsodeControlDataInterface::FunctionalIteration, jeod::LsodeDataArrays::history, jeod::LsodeControlDataInterface::JacobiNewtonInternalJac, jeod::LsodeDataArrays::lin_alg, jeod::LsodeDataArrays::lin_alg_index1, jeod::LsodeControlDataInterface::NewtonIterInternalJac, jeod::LsodeControlDataInterface::NewtonIterInternalJac, jeod::LsodeDataArrays::num_odes, jeod::LsodeDataArrays::pivots, and jeod::LsodeDataArrays::save.

Referenced by jeod::LsodeFirstOrderODEIntegrator::manager initialize calculation part1().

6.5.2.2 void LsodeControlDataInterface::allocate_arrays()

allocates space for vector-populated data to allow for restart

Definition at line 288 of file Isode_control_data_interface.cc.

References jeod::LsodeControlDataInterface::abs_tolerance_error_control, jeod::LsodeControlDataInterface::abs_tolerance_error_control_vec, jeod::LsodeControlDataInterface::error_control_vector_copied_over, jeod::LsodeControlDataInterface::num_odes, jeod::LsodeControlDataInterface::num_odes_at_alloc, jeod::LsodeControlDataInterface::rel_tolerance_error_control_vec.

 $Referenced \ by \ jeod:: LsodeFirstOrderODEIntegrator:: manager_initialize_calculation_part 1 ().$

6.5.2.3 void LsodeFirstOrderODEIntegrator::calculate_epsilon() [protected]

Identify the smallest double precision value, epsilon, such that the computer can distinguish (1+epsilon) from 1.

Definition at line 59 of file lsode_first_order_ode_integrator__support.cc.

References jeod::LsodeFirstOrderODEIntegrator::epsilon, and jeod::LsodeFirstOrderODEIntegrator::sqrt_epsilon.

Referenced by jeod::LsodeFirstOrderODEIntegrator::LsodeFirstOrderODEIntegrator().

6.5.2.4 void LsodeFirstOrderODEIntegrator::calculate_integration_coefficients() [protected]

Modified from original DCFODE subroutine.

calculate_integration_coefficients is called by dstode to set coefficients needed there. The coefficients for the current method, as given by the value of integration_method, are set for all orders and saved. The maximum order assumed here is 12 if integration_method = ImplicitAdamsNonStiff and 5 if integration_method = ImplicitBackDiffStiff.

NOTE - A smaller value of the maximum order is also allowed and may be set by the user with the value control_data.max_order, which gets copied to the protected value max_order_internal.

calculate_integration_coefficients is called once at the beginning of the problem, and again only if integration_method is changed.

The coefficients are stored in two arrays: method_coeffs_complete is a 13x12 array that contains a complete set of coefficients for the method test_coeffs_complete is a 3x12 array that contains the coefficients for local error tests and selection of the step size and/or order. The 1st set of 12 coeffs is for order method_order_current - 1 The 2nd set of 12 coeffs is for order method_order_current + 1

The coefficients in method_coeffs_complete are computed by a genetrating polynomial. For a given order (note that order changes during the integration process up to the maximum allowable, and is identified in the integrator as the variable method_order_current), abbreviate method_coeffs_complete[i][order-1] to mcc[i]

Then $I(x) = mcc[0] + (mcc[1] * x) + (mcc[2] * x^2) + ... + mcc[order] * (x^order)$ For the implicit Adams methods, I(x) is given by dI/dx = (x+1)*(x+2)*...*(x+order-1)/(order-1)!, I(-1) = 0.; For the BDF methods, I(x) is given by I(x) = (x+1)*(x+2)*...*(x+order) / ((order)! * (1 + 1/2 + ... + 1/order))

(! represents factorial)

Note that while method_coeffs_compelte is a rectangular array for convenience, it is effectively a triangular array since method_coeffs_complete[i][order-1] has no meaning for $i \ge 1$ order = 1: method_coeffs_complete[0-1][0] order = 2: method_coeffs_complete[0-2][1] ... order = 12: method_coeffs_complete[0-12][1] Hence a 13x12 array.

6.5.2.19 unsigned int LsodeFirstOrderODEIntegrator::index_of_max_magnitude (unsigned int num_points, double ** array, int start_ix) [protected]

Modified version of IDAMAX.

IDAMAX has 2 operations, one for situations in which the index increments by 1, and another for the converse. Since all instances in LSODE use the unit-increment method, that is the only one represented here. Search through matrix "array", starting at array[start_ix_1][start_ix_2] for the next "num_points" elements. The boolean search_ix_1 controls whether to increment index#1 (true), or index#2 (false). Method returns the searched index that corresponds to the largest magnitude.

Note

The only call to this method passed "k" in for both indices, so I stripped the second argument. If DGBFA gets implemented, it will have to be added back in; the call from DGBFA is for array starting at (M,K)

```
6.5.2.26 void LsodeFirstOrderODEIntegrator::integrator_compute_new_order_prep( ) [protected]
```

The first steps in computing whether the order of the integrator should be changed.

Regardless of the success or failure of the step, the step-ratio factors for an increase, decrease, or retention of the integrator order are computed. In the case of failure, the increase ratio (data_stode.step_ratio_order_inc) has

already been set to 0.0 to prevent an order increase. The largest of these factors is determined and the new order chosen accordingly. In the unusual case of equality, the priority is given to:

- 1. retain the order
- 2. increase the order (if inc = dec > same)

If the order is to be increased, we compute one additional scaled derivative.

This process is spread over four methods - integrator_compute_new_order_prep integrator_compute_new_order integrator_set_new_order

6.5.2.27 void LsodeFirstOrderODEIntegrator::integrator_core() [protected]

integrator_core provides the front-end to all of the integrator_*i methods, which together perform one step of the integration of an initial value problem for a system of ordinary differential equations.

Modified from DSTODE

NOTES: The entire integrator_* suite is independent of the value of the iteration method indicator, corrector_method, when said is != 0, and hence is independent of the type of chord method used, or the Jacobian structure.

The value internal_state (JSTART) controls the direction that this method takes.

By commenting out substantial parts of the package that are not useful to the ER7 / JEOD / Trick implementation, the only viable values for internal_state are now 0 or 1. internal_state = 0 : take the first step. internal_state = 1 : take another step, continuing from the last. internal_state = -1 was associated with externally driven changes to the input aprameters, something we do not allow. internal_state = -2 is associated with the critical / singularity time avoidance, something we have not implemented.

6.5.2.33 void LsodeFirstOrderODEIntegrator::integrator_fail_reset_order_1_part1 () [protected]

Repopulates the y-array from history, recomputes the original first derivatives, sets the order back to 1, and reduces the step size by a factor of 10.

Called when 3 or more failures have occured. It is assumed that the derivatives that have accumulated in the history array have errors of the wrong order. Hence the first derivative is recomputed, and the order is set to 1. Then the step-size is reduced by a factor of 10, and the step is retried. Repeat until successful, or the step reaches the minimum step-size.

If 10 failures occur, exit with step_error = -1.

This method is divided in two by a call to calculate the derivatives. Part1 precedes that call, the execution exits from the integrator back to the sim control engine; then on return to the integrator, execution immediately proceeds with part2.

```
6.5.2.44 void LsodeFirstOrderODEIntegrator::interpolate_y ( ) [protected]
```

Interpolates the zeroth-derivative of y Adapted from subroutine DINTDY, which was a general method for interpolating the K-th derivative of the dependent variable vector, y.

Implementation notes - DINTDY was called exclusively with three input values that always matched.

- 1. Argument #1 T (time). Calls to DINTDY always passed TOUT (now cycle target time) in for T
- 2. Argument #2 K (order). Calls to DINTDY always passed 0 in for K
- 3. Argument #5 DKY (value). DKY is the value that DINTDY interpolates.i Calls to DINTDY always passed Y in for DKY. This routine uses y directly in place of DKY, so can only interpolate the 0-th derivative (since that is y), and always evaluates at cycle_target_time. replaced accordingly.

The computed values are gotten by interpolation using the Nordsieck history array, arrays.history. The formula for Y is:

```
Y[i] = sum \{j=0 \text{ to method\_order\_current}\} \{ (cycle\_target\_time - stage\_target\_time)^(j) * arrays.history[i-1][j] / h^j \}
Definition at line 267 of file Isode first order ode integrator support.cc.

```
6.5.2.45 void LsodeFirstOrderODEIntegrator::jacobian_prep_init() [protected]
```

Modified from DPREPJ.

DPREPJ was called by DSTODE to compute and process the matrix P = I - h*el(1)*J, where J is an approximation to the Jacobian.

NOTES

DPREPJ has been split into 3 parts, book-ended by the external-calls. jacobian_prep_init contains the code that precededs the first external-call jacobian_prep_loop contains the code that continues to loop according to the limits as written is DPREPJ. jacobian_prep_wrap_up contains the code that follows successful completion of the looping section of DPREPJ.

Note that the division in this implementation is not linear with that in the original Fortran. The external calls within the original fortran are embedded within switch-blocks and for loops; the return points - to go to the next routine will pick up from one of several locations in the Fortran code, depending on the configuration at the time the external call was made.

For the ER7_Utils / JEOD / Trick implementation, the derivative/jac calls must be external to the integrate call, so we must fully back out and then reenter. Rentry goes to jacobian_prep_loop.

Some variables that were local have been moved to the class so that their value is not lost in going from jacobian_prep_init to jacobian_prep_loop. These are typically identified with ***_dprepj to indicate that their sole purpose is within dprepj (the original name of the jacobian_prep_* routines).

Here the jacobian is computed by the user-supplied routine JAC if corrector_method = NewtonIterUserJac or NewtonIterUserBandJac, or by finite differencing if corrector_method = NewtonIterInternalJac, JacobiNewtonInternalJac, or NewtonIterInternalBandJac.

If corrector_method = JacobiNewtonInternalJac, a diagonal approximation to the Jacobian is used. The Jacobian is stored in arrays lin_alg

If corrector_method != JacobiNewtonInternalJac, P is subjected to LU decomposition in preparation for later solution of linear systems with P as coefficient matrix. This is done by gauss_elim_factor (DGEFA) if corrector_method = NewtonIterUserJac or NewtonIterInternalJac, and by linear_solver (DGBFA) if corrector_method = NewtonIterUserBandJac or NewtonIterInternalBandJac.

Note that the corrector_method using the banded Jacobians is not supported in this release, so linear_solver is not used.

FTEM and ACOR were effectively the same, now arrays.accum_correction. SAVF is now arrays.save. WM is now arrays.lin alg

6.5.2.48 void LsodeFirstOrderODEIntegrator::linear_chord_iteration() [protected]

Modified from DSOLSY.

This routine manages the solution of the linear system arising from a chord iteration. It is called if corrector_method != FunctionalIteration.

If corrector_method == NewtonIterUserJac || NewtonIterInternalJac, it calls linear_solver (was DGESL). If corrector_method = JacobiNewtonInternalJac it updates the coefficient hl0 = step_size * method_coeff_first (previously H*-EL0) in the diagonal matrix, and then computes the solution.

6.5 Lsode 45

6.5.2.65 LsodeSecondOrderODEIntegrator::LsodeSecondOrderODEIntegrator(void) [protected]

LsodeSecondOrderODEIntegrator default constructor.

Definition at line 52 of file Isode second order ode integrator.cc.

6.5.2.66 LsodeSecondOrderODEIntegrator::LsodeSecondOrderODEIntegrator (const LsodeControlDataInterface & data_in, er7_utils::IntegrationControls & controls, unsigned int size) [protected]

LsodeSecondOrderODEIntegrator non-default constructor.

Parameters

	in	data_in	LSODE-specific control data.	
ſ	in,out	controls	Integration controls.	
	in	size	State size.	

Definition at line 68 of file Isode_second_order_ode_integrator.cc.

References jeod::LsodeSecondOrderODEIntegrator::arrays_allocated, jeod::LsodeSecondOrderODEIntegrator::y, and jeod::LsodeSecondOrderODEIntegrator::y_dot.

6.5.2.67 LsodeSecondOrderODEIntegrator::LsodeSecondOrderODEIntegrator (const LsodeControlDataInterface & data_in, er7_utils::IntegrationControls & controls, const er7_utils::GeneralizedPositionDerivativeFunctions & deriv_funs, unsigned int position_size, unsigned int velocity_size) [protected]

Definition at line 90 of file lsode_second_order_ode_integrator.cc.

References jeod::LsodeSecondOrderODEIntegrator::arrays_allocated, jeod::LsodeSecondOrderODEIntegrator::y, and jeod::LsodeSecondOrderODEIntegrator::y dot.

6.5.2.68 LsodeSimpleSecondOrderODEIntegrator::LsodeSimpleSecondOrderODEIntegrator (void)

LsodeSimpleSecondOrderODEIntegrator default constructor.

Definition at line 50 of file lsode_simple_second_order_ode_integrator.cc.

6.5.2.69 LsodeSimpleSecondOrderODEIntegrator::LsodeSimpleSecondOrderODEIntegrator (const LsodeControlDataInterface & data_in, er7_utils::IntegrationControls & controls, unsigned int size)

LsodeSimpleSecondOrderODEIntegrator non-default constructor.

Parameters

in	data_in	State Variable Data	
in	size	State size	
in,out	controls	Integration controls	

Definition at line 57 of file lsode_simple_second_order_ode_integrator.cc.

6.5.2.70 double LsodeFirstOrderODEIntegrator::magnitude_of_weighted_array (const double * v) [protected]

returns the RMS value of {V dot W}, where V and W are N-vectors.

Modified version of DVNORM

The only places DVNORM is used, it is multiplying some array by the error_weight array (arrays.error_weight) across control_data.num_odes terms. These values are fixed for our application, and do not need to be passed in.

46 Module Documentation

6.5 Lsode 47

Parameters

V	array
---	-------

Definition at line 274 of file Isode first order ode integrator utility.cc.

References jeod::LsodeFirstOrderODEIntegrator::arrays, jeod::LsodeFirstOrderODEIntegrator::control_data, jeod::LsodeDataArrays::error_weight, and jeod::LsodeControlDataInterface::num_odes.

Referenced by jeod::LsodeFirstOrderODEIntegrator::integrator_compute_new_order(), jeod::LsodeFirstOrderODEIntegrator::integrator_compute_new_order_prep(), jeod::LsodeFirstOrderODEIntegrator::integrator_core(), jeod::LsodeFirstOrderODEIntegrator::integrator::integrator-corrector_converged(), jeod::LsodeFirstOrderODEIntegrator::in

6.5.2.71 double LsodeFirstOrderODEIntegrator::magnitude_of_weighted_array (unsigned int *index*, double **v) [protected]

returns RMS value of v[*][index]

Modified version of DVNORM, second implementation.

Parameters

index	use this index
V	array

Definition at line 293 of file lsode_first_order_ode_integrator__utility.cc.

References jeod::LsodeFirstOrderODEIntegrator::arrays, jeod::LsodeFirstOrderODEIntegrator::control_data, jeod::LsodeDataArrays::error weight, and jeod::LsodeControlDataInterface::num odes.

6.5.2.72 int LsodeFirstOrderODEIntegrator::manager_check_stop_conditions() [protected]

verifies whether the convergence conditions have been met to end the cycle.

Definition at line 519 of file lsode_first_order_ode_integrator__manager.cc.

References jeod::LsodeFirstOrderODEIntegrator::calculation_task, jeod::LsodeFirstOrderODEIntegrator::CompleteCycle, jeod::LsodeFirstOrderODEIntegrator::cycle_target_time, jeod::LsodeFirstOrderODEIntegrator::interpolate_y(), jeod::LsodeFirstOrderODEIntegrator::Normal, jeod::LsodeFirstOrderODEIntegrator::NormalWith-Singularity, jeod::LsodeFirstOrderODEIntegrator::one-Step, jeod::LsodeFirstOrderODEIntegrator::One-StepWithSingularity, jeod::LsodeFirstOrderODEIntegrator::prior-num_steps, jeod::LsodeFirstOrderODEIntegrator::stage_target_time, and jeod::LsodeFirstOrderODEIntegrator::step size.

Referenced by jeod::LsodeFirstOrderODEIntegrator::process_entry_point_cycle_start().

6.5.2.73 void LsodeFirstOrderODEIntegrator::manager_initialize_calculation_part1 () [protected]

Sets the values for the case with calculation_phase = 1.

Definition at line 332 of file lsode_first_order_ode_integrator__manager.cc.

References jeod::LsodeDataArrays::allocate_arrays(), jeod::LsodeControlDataInterface::allocate_arrays(), jeod::LsodeFirstOrderODEIntegrator::control_data, jeod::LsodeControlDataInterface::corrector_method, jeod::LsodeFirstOrderODEIntegrator::InitCalc, jeod::LsodeFirstOrderODEIntegrator::internal_state, jeod::LsodeControlDataInterface::is_corrector_method_functional_iteration(), jeod::LsodeDataArrays::lin_alg_1, jeod::LsodeControlDataInterface::num_odes, jeod::LsodeFirstOrderODEIntegrator::re_entry_point, and jeod::LsodeFirstOrderODEIntegrator::sqrt_epsilon.

Referenced by jeod::LsodeFirstOrderODEIntegrator::process_entry_point_cycle_start().

48 Module Documentation

Chapter 7

Namespace Documentation

7.1 er7_utils Namespace Reference

Namespace er7 utils contains the state integration models used by JEOD.

Data Structures

class TwoDArray

RAII template class that implements a rectangular two dimensional array.

class DoubleTwoDArray

2D array, specialized for doubles.

7.1.1 Detailed Description

Namespace er7_utils contains the state integration models used by JEOD.

7.2 jeod Namespace Reference

Namespace jeod.

Data Structures

· class GaussJacksonCoefficientsPair

Contains a summed Adams and Gauss-Jackson coefficient pair.

· class GaussJacksonCoeffs

Contains the Gauss-Jackson predictor and corrector coefficients.

class GaussJacksonConfig

Contains Gauss-Jackson configuration data.

· class GaussJacksonFirstOrderODEIntegrator

Integrates a first order ODE using the summed Adams technique that is embedded within the Gauss-Jackson technique.

class GaussJacksonGeneralizedDerivSecondOrderODEIntegrator

Integrates a generalized derivative second order ODE using Gauss-Jackson.

· class GaussJacksonIntegrationControls

IntegrationControls specialized for Gauss-Jackson integration.

class GaussJacksonIntegratorBase

Base template class for integrating state via the Gauss-Jackson technique.

· class GaussJacksonIntegratorConstructor

Create state and time integrators that propagate using Gauss-Jackson.

· class GaussJacksonOneState

Essentially just a double*.

· class GaussJacksonRationalCoefficients

Contains a set of Adams or Stormer-Cowell coefficients.

• class GaussJacksonSimpleSecondOrderODEIntegrator

Integrates a simple second order ODE using the Gauss-Jackson technique.

· class GaussJacksonStateMachine

Guides the behavior of the Gauss-Jackson integration process via a finite state machine.

· class GaussJacksonTwoState

Essentially just std::pair<double*>.

• class GeneralizedSecondOrderODETechnique

Enumerates the integration schemes, generalized Cartesian or Lie group integration, and provides simple utilities that work with this.

class IntegrationMessages

Declares messages associated with the integration test model.

class JeodIntegrationGroupOwner

The abstract class IntegrationGroupOwner contains an IntegrationGroup.

· class JeodIntegrationGroup

A JeodIntegrationGroup integrates the state of a set of objects over time.

· class JeodIntegrationTime

The class JeodIntegrationTime adds the concepts of timestamping and notification of changes in the nature of time to the ER7 numerical utilities TimeInterface class.

class Restartable2DSecondOrderIntegrator

Integrates a second order ODE in two dimensional space, $d^2x/dt^2 = a(x,t)$, where x is a two-vector.

class RestartableScalarFirstOrderODEIntegrator

A RestartableScalarFirstOrderODEIntegrator integrates a first order ODE, dx/dt = v(x,t), where x is a scalar.

• class RestartableT3SecondOrderODEIntegrator

A RestartableT3SecondOrderODEIntegrator integrates a second order ODE in three space, $d^2x/dt^2 = a(x,t)$, where x is a three-vector.

class RestartableSO3SecondOrderODEIntegrator

A RestartableSO3SecondOrderODEIntegrator integrates a generalized second order ODE that describes rotation in three space.

class RestartableStateIntegrator

A RestartableStateIntegrator establishes the basic capabilities needed to make a state integrator a managed resource.

• class RestartableFirstOrderODEIntegrator

A RestartableFirstOrderODEIntegrator is-a RestartableStateIntegrator that manages an er7_utils::FirstOrderODEIntegrator.

· class RestartableSecondOrderODEIntegrator

A RestartableSecondOrderODEIntegrator is-a RestartableStateIntegrator that manages the integrator for a second order ODE problem.

· class RestartableSimpleSecondOrderODEIntegrator

A RestartableSimpleSecondOrderODEIntegrator is-a RestartableSecondOrderODEIntegrator that manages the integrator for a simple second order ODE problem, one in which the time derivative of the generalized position is the generalized velocity.

• class RestartableGeneralizedDerivSecondOrderODEIntegrator

A RestartableGeneralizedDerivSecondOrderODEIntegrator is-a RestartableStateIntegrator that manages the integrator for a generalized second order ODE problem, one in which the time derivative of the generalized position is some function of the generalized position and the generalized velocity.

• class RestartableGeneralizedStepSecondOrderODEIntegrator

A RestartableGeneralizedStepSecondOrderODEIntegrator is-a RestartableStateIntegrator that manages the integrator for a generalized second order ODE problem, one in which the time derivative of the generalized position is some function of the generalized position and the generalized velocity.

• class TimeChangeSubscriber

A TimeChangeSubscriber is some object that wants to be notified of changes in the nature of time.

class LsodeControlDataInterface

Specifies controls for an LSODE integrator.

class LsodeDataJacobianPrep

Data associated with the method DPREPJ.

class LsodeDataArrays

The data arrays.

· class LsodeDataStode

The data associated with method Dstode.

class LsodeFirstOrderODEIntegrator

Jeod-compatible version of the Livermore ODE solver, LSODE.

class LsodeGeneralizedDerivSecondOrderODEIntegrator

JEOD-compatible version of the Livermore ODE solver, LSODE, capable of integrating second-order ODEs.

class LsodeIntegrationControls

Contains controls for an LSODE integrator.

class LsodeIntegratorConstructor

Create state and time integrators that propagate using standard Lsode.

class LsodeSecondOrderODEIntegrator

JEOD-compatible version of the Livermore ODE solver, LSODE, capable of integrating second-order ODEs.

class LsodeSimpleSecondOrderODEIntegrator

JEOD-compatible version of the Livermore ODE solver, LSODE, capable of integrating second-order ODEs.

Typedefs

· typedef

GaussJacksonIntegratorBase

< GaussJacksonOneState.

 $er7_utils:: FirstOrderODEIntegrator > GaussJacksonIntegratorBaseFirst$

Alias for a first order Gauss Jackson integrator.

· typedef

GaussJacksonIntegratorBase

< GaussJacksonTwoState,

 $\hbox{er7_utils::} Second Order ODE Integrator > Gauss Jackson Integrator Base Second$

Alias for a second order Gauss Jackson integrator.

Functions

- std::ostream & operator<< (std::ostream &stream, const GaussJacksonCoeffs &coeff)
- static GaussJacksonConfig set_default_config_values (const GaussJacksonConfig &config)

Swap the negative ones in the supplied config with the default values, some of which are computed.

static unsigned int validate_config (const GaussJacksonConfig &config)

Check for invalid values in the supplied config.

static

GaussJacksonIntegrationControls * cast_to_gj_controls (er7_utils::IntegrationControls &controls)

Cast the provided integration controls to a GaussJacksonIntegrationControls.

7.2.1 Detailed Description

Namespace jeod.

7.2.2 Typedef Documentation

7.2.2.1 typedef GaussJacksonIntegratorBase< GaussJacksonOneState, er7_utils::FirstOrderODEIntegrator> jeod::GaussJacksonIntegratorBaseFirst

Alias for a first order Gauss Jackson integrator.

Definition at line 84 of file gauss_jackson_integrator_base_first.hh.

7.2.2.2 typedef GaussJacksonIntegratorBase < GaussJacksonTwoState, er7_utils::SecondOrderODEIntegrator> jeod::GaussJacksonIntegratorBaseSecond

Alias for a second order Gauss Jackson integrator.

Definition at line 84 of file gauss_jackson_integrator_base_second.hh.

7.2.3 Function Documentation

7.2.3.1 static GaussJacksonIntegrationControls* jeod::cast_to_gj_controls (er7_utils::IntegrationControls & controls) [static]

Cast the provided integration controls to a GaussJacksonIntegrationControls.

Parameters

controls

Returns

GaussJacksonIntegrationControls pointer, guaranteed to be non-null.

Definition at line 52 of file gauss_jackson_integrator_constructor.cc.

Referenced by jeod::Gauss-JacksonIntegratorConstructor::create_first_order_ode_integrator(), jeod::Gauss-JacksonIntegratorConstructor::create_generalized_deriv_second_order_ode_integrator(), and jeod::Gauss-JacksonIntegratorConstructor::create_second_order_ode_integrator().

7.2.3.2 std::ostream& jeod::operator << (std::ostream & stream, const GaussJacksonCoeffs & coeff)

Parameters

stream	The stream to be printed to.
coeff	The coefficients to be printed.

Definition at line 143 of file gauss_jackson_coeffs.cc.

References jeod::GaussJacksonCoeffs::corrector, jeod::GaussJacksonCoeffs::order, jeod::GaussJacksonCoeffs::predictor, and jeod::GaussJacksonCoefficientsPair::print().

7.2.3.3 static GaussJacksonConfig jeod::set_default_config_values (const GaussJacksonConfig & config)
[static]

Swap the negative ones in the supplied config with the default values, some of which are computed.

Definition at line 77 of file gauss_jackson_config.cc.

References jeod::GaussJacksonConfig::absolute_tolerance, jeod::GaussJacksonConfig::final_order, jeod::GaussJacksonConfig::max_correction_iterations, jeod::GaussJacksonConfig::ndoubling_steps, jeod::GaussJacksonConfig::priming_technique, and jeod::GaussJacksonConfig::relative_tolerance.

Referenced by jeod::GaussJacksonConfig::validate_configuration().

7.2.3.4 static unsigned int jeod::validate_config (const GaussJacksonConfig & config) [static]

Check for invalid values in the supplied config.

Definition at line 163 of file gauss_jackson_config.cc.

References jeod::GaussJacksonConfig::absolute_tolerance, jeod::GaussJacksonConfig::final_order, jeod::GaussJacksonConfig::initial_order, jeod::GaussJacksonConfig::ndoubling_steps, and jeod::GaussJacksonConfig::relative_tolerance.

Referenced by jeod::GaussJacksonConfig::validate_configuration().

Chapter 8

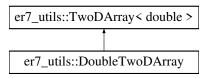

Data Structure Documentation

8.1 er7_utils::DoubleTwoDArray Class Reference

2D array, specialized for doubles.

```
#include <two_d_array.hh>
```

Inheritance diagram for er7_utils::DoubleTwoDArray:

Friends

- class InputProcessor
- void init_attrer7_utils__DoubleTwoDArray ()

Additional Inherited Members

8.1.1 Detailed Description

2D array, specialized for doubles.

Definition at line 425 of file two_d_array.hh.

8.1.2 Friends And Related Function Documentation

```
8.1.2.1 void init_attrer7_utils__DoubleTwoDArray( ) [friend]
```

8.1.2.2 friend class InputProcessor [friend]

Definition at line 427 of file two_d_array.hh.

The documentation for this class was generated from the following file:

• two_d_array.hh

8.2 jeod::GaussJacksonCoefficientsPair Class Reference

Contains a summed Adams and Gauss-Jackson coefficient pair.

#include <gauss_jackson_coefficients_pair.hh>

Public Member Functions

GaussJacksonCoefficientsPair ()

Default constructor.

→GaussJacksonCoefficientsPair ()

Destructor.

• void configure (int max_order)

Allocate (re-allocate) memory for the coefficients.

void swap (GaussJacksonCoefficientsPair &other)

Non-throwing swap.

void allocate_arrays (int size)

Allocate space for the coefficients.

void deallocate arrays ()

Release allocated memory.

void apply (int nelem, int ncoeff, double const *const *acc_hist, const GaussJacksonTwoState &state_sum)
 const

Apply both sets of coefficients to the supplied history data.

void apply (int nelem, int ncoeff, double const *const *acc_hist, const GaussJacksonOneState &state_sum)
 const

Apply just the Adams coefficients to the supplied history data.

· void print (int order, std::ostream &stream) const

Print the coefficients.

Data Fields

double * sa coefs

Summed Adams coefficients, in ordinate form.

double * gj_coefs

Gauss Jackson coefficients, in ordinate form.

Private Member Functions

• GaussJacksonCoefficientsPair (const GaussJacksonCoefficientsPair &)

Not implemented.

• GaussJacksonCoefficientsPair & operator= (const GaussJacksonCoefficientsPair &)

Not implemented.

Friends

- class InputProcessor
- void init_attrjeod__GaussJacksonCoefficientsPair ()

8.2.1 Detailed Description

Contains a summed Adams and Gauss-Jackson coefficient pair.

Definition at line 85 of file gauss_jackson_coefficients_pair.hh.

8.2.2 Constructor & Destructor Documentation

8.2.2.1 jeod::GaussJacksonCoefficientsPair::GaussJacksonCoefficientsPair() [inline]

Default constructor.

Definition at line 109 of file gauss_jackson_coefficients_pair.hh.

8.2.2.2 jeod::GaussJacksonCoefficientsPair::~GaussJacksonCoefficientsPair() [inline]

Destructor.

Definition at line 118 of file gauss_jackson_coefficients_pair.hh.

References deallocate_arrays().

8.2.2.3 jeod::GaussJacksonCoefficientsPair::GaussJacksonCoefficientsPair (const GaussJacksonCoefficientsPair &)

[private]

Not implemented.

8.2.3 Member Function Documentation

8.2.3.1 void jeod::GaussJacksonCoefficientsPair::allocate_arrays (int size)

Allocate space for the coefficients.

Parameters

size Array size.

Definition at line 37 of file gauss_jackson_coefficients_pair.cc.

References gj_coefs, and sa_coefs.

Referenced by configure().

8.2.3.2 void jeod::GaussJacksonCoefficientsPair::apply (int *nelem*, int *ncoeff*, double const *const * acc_hist, const GaussJacksonTwoState & state_sum) const

Apply both sets of coefficients to the supplied history data.

The first element of the output state_sum is calculated as the inner products of the acceleration history with the summed Adams coefficients. The second element is calculated as the inner product with the Gauss-Jackson coefficients. (First = first integral; second = second integral.)

Parameters

nelem	Dimensionality of each acceleration history element
-------	---

ncoeff	Number of elements in the acceleration history
acc_hist	Acceleration history
state_sum	Output inner products

Definition at line 63 of file gauss_jackson_coefficients_pair.cc.

Referenced by jeod::GaussJacksonIntegratorBase < State, Primer >::integrate_gj().

8.2.3.3 void jeod::GaussJacksonCoefficientsPair::apply (int *nelem*, int *ncoeff*, double const *const * acc_hist, const GaussJacksonOneState & state_sum) const

Apply just the Adams coefficients to the supplied history data.

Parameters

nelem	Dimensionality of each acceleration history element
ncoeff	Number of elements in the acceleration history
acc_hist	Acceleration history
state_sum	Output inner products

Definition at line 96 of file gauss_jackson_coefficients_pair.cc.

8.2.3.4 void jeod::GaussJacksonCoefficientsPair::configure (int max_order) [inline]

Allocate (re-allocate) memory for the coefficients.

Arrays are size & to contain max order+1 elements.

Parameters

max_order	Maximum order that will be used.

Definition at line 128 of file gauss_jackson_coefficients_pair.hh.

References allocate_arrays(), and deallocate_arrays().

Referenced by jeod::GaussJacksonCoeffs::configure().

8.2.3.5 void jeod::GaussJacksonCoefficientsPair::deallocate_arrays ()

Release allocated memory.

Definition at line 46 of file gauss_jackson_coefficients_pair.cc.

References gj_coefs, and sa_coefs.

Referenced by configure(), and ~GaussJacksonCoefficientsPair().

8.2.3.6 GaussJacksonCoefficientsPair& jeod::GaussJacksonCoefficientsPair::operator= (const GaussJacksonCoefficientsPair &) [private]

Not implemented.

8.2.3.7 void jeod::GaussJacksonCoefficientsPair::print (int order, std::ostream & stream) const

Print the coefficients.

Parameters

order	Coefficients order	
stream	Output stream	

Definition at line 123 of file gauss jackson coefficients pair.cc.

References gj_coefs, and sa_coefs.

Referenced by jeod::operator<<().

8.2.3.8 void jeod::GaussJacksonCoefficientsPair::swap (GaussJacksonCoefficientsPair & other)

Non-throwing swap.

Parameters

other	Coeffs pair with which contents are to be swapped.
	' ' ' ' ' ' ' ' ' ' ' ' ' ' ' ' ' ' '

Definition at line 54 of file gauss_jackson_coefficients_pair.cc.

References gj_coefs, and sa_coefs.

Referenced by jeod::GaussJacksonCoeffs::swap().

8.2.4 Friends And Related Function Documentation

8.2.4.1 void init_attrjeod__GaussJacksonCoefficientsPair() [friend]

8.2.4.2 friend class InputProcessor [friend]

Definition at line 87 of file gauss_jackson_coefficients_pair.hh.

8.2.5 Field Documentation

8.2.5.1 double* jeod::GaussJacksonCoefficientsPair::gj_coefs

Gauss Jackson coefficients, in ordinate form.

trick_units(-)

Definition at line 101 of file gauss jackson coefficients pair.hh.

Referenced by allocate_arrays(), jeod::GaussJacksonCoeffs::compute_coeffs(), deallocate_arrays(), print(), jeod::GaussJacksonIntegratorBase< State, Primer >::start_cycle(), and swap().

8.2.5.2 double* jeod::GaussJacksonCoefficientsPair::sa_coefs

Summed Adams coefficients, in ordinate form.

trick_units(-)

Definition at line 96 of file gauss_jackson_coefficients_pair.hh.

Referenced by allocate_arrays(), jeod::GaussJacksonCoeffs::compute_coeffs(), deallocate_arrays(), print(), jeod::GaussJacksonIntegratorBase < State, Primer >::start_cycle(), and swap().

The documentation for this class was generated from the following files:

- gauss_jackson_coefficients_pair.hh
- · gauss_jackson_coefficients_pair.cc

8.3 jeod::GaussJacksonCoeffs Class Reference

Contains the Gauss-Jackson predictor and corrector coefficients.

```
#include <gauss_jackson_coeffs.hh>
```

Public Member Functions

• GaussJacksonCoeffs ()

Default constructor.

• GaussJacksonCoeffs (const GaussJacksonCoeffs &src)

Copy constructor.

∼GaussJacksonCoeffs ()

Destructor.

• GaussJacksonCoeffs & operator= (GaussJacksonCoeffs src)

Copy-and-swap assignment operator.

void swap (GaussJacksonCoeffs &src)

Non-throwing swap.

• void configure (unsigned int max_order_in)

Configure to enable coefficients up to the specified maximum order.

· void compute_coeffs (unsigned int order_in)

Compute coefficients for the specified order.

Data Fields

· GaussJacksonCoefficientsPair predictor

Summed Adams and Gauss-Jackson predictor coefficients.

GaussJacksonCoefficientsPair * corrector

Summed Adams and Gauss-Jackson corrector coefficients.

• unsigned int max_order

Maximum order; used for sizing.

· unsigned int order

Current order; dictates the coefficient values.

Friends

- · class InputProcessor
- void init_attrjeod__GaussJacksonCoeffs ()
- std::ostream & operator<< (std::ostream &stream, const GaussJacksonCoeffs &coeff)

Print the coefficients.

8.3.1 Detailed Description

Contains the Gauss-Jackson predictor and corrector coefficients.

Definition at line 79 of file gauss_jackson_coeffs.hh.

8.3.2 Constructor & Destructor Documentation

8.3.2.1 jeod::GaussJacksonCoeffs::GaussJacksonCoeffs() [inline]

Default constructor.

Definition at line 113 of file gauss_jackson_coeffs.hh.

8.3.2.2 jeod::GaussJacksonCoeffs::GaussJacksonCoeffs (const GaussJacksonCoeffs & src) [inline]

Copy constructor.

Note that this doesn't copy; it recomputes. The end result is as if a copy had been made.

Parameters

src Object to be copied.

Definition at line 127 of file gauss jackson coeffs.hh.

References compute_coeffs(), configure(), max_order, and order.

8.3.2.3 jeod::GaussJacksonCoeffs::~GaussJacksonCoeffs()

Destructor.

Definition at line 45 of file gauss_jackson_coeffs.cc.

References corrector.

8.3.3 Member Function Documentation

8.3.3.1 void jeod::GaussJacksonCoeffs::compute_coeffs (unsigned int order_in)

Compute coefficients for the specified order.

Parameters

order in The current order.

Definition at line 85 of file gauss_jackson_coeffs.cc.

References jeod::GaussJacksonRationalCoefficients::configure_adams_corrector(), jeod::GaussJacksonRationalCoefficients::construct_predictor(), jeod::GaussJacksonRationalCoefficients::construct_stormer_cowell_corrector(), jeod::GaussJacksonRationalCoefficients::convert_to_ordinate_form(), corrector, jeod::GaussJacksonRationalCoefficients::discard_extra_terms(), jeod::GaussJacksonRationalCoefficients::displace_back(), jeod::GaussJacksonCoefficientsPair::gi coefs, max order, order, predictor, and jeod::GaussJacksonCoefficientsPair::sa coefs.

 $\label{lem:controls::GaussJacksonIntegrationControls::GaussJacksonIntegrationControls::GaussJacksonIntegrationControls::GaussJacksonIntegrationControls::start_cycle().$

8.3.3.2 void jeod::GaussJacksonCoeffs::configure (unsigned int max_order_in)

Configure to enable coefficients up to the specified maximum order.

Parameters

max_order_in The maximum order to be used.

Definition at line 65 of file gauss_jackson_coeffs.cc.

References jeod::GaussJacksonCoefficientsPair::configure(), corrector, max_order, order, and predictor.

Referenced by GaussJacksonCoeffs(), and jeod::GaussJacksonIntegrationControls::GaussJacksonIntegrationControls().

8.3.3.3 GaussJacksonCoeffs& jeod::GaussJacksonCoeffs::operator=(GaussJacksonCoeffs src) [inline]

Copy-and-swap assignment operator.

Parameters

src	Object to be copied.

Definition at line 147 of file gauss jackson coeffs.hh.

References swap().

8.3.3.4 void jeod::GaussJacksonCoeffs::swap (GaussJacksonCoeffs & src)

Non-throwing swap.

Parameters

src	Object to swap contents with.

Definition at line 53 of file gauss_jackson_coeffs.cc.

References corrector, max_order, order, predictor, and jeod::GaussJacksonCoefficientsPair::swap().

Referenced by operator=().

8.3.4 Friends And Related Function Documentation

8.3.4.1 void init_attrjeod__GaussJacksonCoeffs() [friend]

8.3.4.2 friend class InputProcessor [friend]

Definition at line 81 of file gauss_jackson_coeffs.hh.

8.3.4.3 std::ostream& operator<<(std::ostream & stream, const GaussJacksonCoeffs & coeff) [friend]

Print the coefficients.

Parameters

-			
	stream	The stream to be printed to.	
coeff The coefficients to be printed.		The coefficients to be printed.	

Definition at line 143 of file gauss_jackson_coeffs.cc.

8.3.5 Field Documentation

$8.3.5.1 \quad \textbf{GaussJacksonCoefficientsPair} * \textbf{jeod::GaussJacksonCoeffs::corrector}$

Summed Adams and Gauss-Jackson corrector coefficients.

trick_units(-)

Definition at line 95 of file gauss_jackson_coeffs.hh.

Referenced by compute_coeffs(), configure(), jeod::GaussJacksonIntegratorBase< State, Primer >::integrate_gj(), jeod::operator<<(), jeod::GaussJacksonIntegratorBase< State, Primer >::start_cycle(), swap(), and \sim GaussJacksonCoeffs().

8.3.5.2 unsigned int jeod::GaussJacksonCoeffs::max_order

Maximum order; used for sizing.

trick units(-)

Definition at line 100 of file gauss jackson coeffs.hh.

Referenced by compute_coeffs(), configure(), GaussJacksonCoeffs(), and swap().

8.3.5.3 unsigned int jeod::GaussJacksonCoeffs::order

Current order; dictates the coefficient values.

trick_units(-)

Definition at line 105 of file gauss_jackson_coeffs.hh.

Referenced by compute_coeffs(), configure(), GaussJacksonCoeffs(), jeod::operator<<(), and swap().

8.3.5.4 GaussJacksonCoefficientsPair jeod::GaussJacksonCoeffs::predictor

Summed Adams and Gauss-Jackson predictor coefficients.

trick_units(-)

Definition at line 90 of file gauss_jackson_coeffs.hh.

Referenced by compute_coeffs(), configure(), jeod::operator<<(), and swap().

8.4 jeod::GaussJacksonConfig Class Reference

Contains Gauss-Jackson configuration data.

```
#include <gauss_jackson_config.hh>
```

Static Public Member Functions

• static GaussJacksonConfig default_configuration ()

Creates a GaussJacksonConfig with all members set to -1.

static GaussJacksonConfig standard_configuration ()

Creates a GaussJacksonConfig with all members set to their defaults.

• static GaussJacksonConfig validate_configuration (const GaussJacksonConfig &config)

Creates a GaussJacksonConfig based on the supplied configuration.

Data Fields

• er7_utils::Integration::Technique priming_technique

The integration technique to be used to prime the Gauss-Jackson process.

unsigned int initial_order

The order of the Gauss Jackson integrator immediately after priming.

unsigned int final_order

The order of the Gauss Jackson integrator once it's operational.

unsigned int ndoubling_steps

The number of time doubling steps involved in the bootstrap operation.

unsigned int max correction iterations

Maximum number of correction steps allowed before the integrator is deemed to be not converging.

double relative tolerance

Number that indicates the allowable relative difference for two states to be considered converged.

• double absolute_tolerance

Number that indicates the allowable absolute difference for two states to be considered converged.

Friends

- class InputProcessor
- void init_attrjeod__GaussJacksonConfig ()

8.4.1 Detailed Description

Contains Gauss-Jackson configuration data.

All member data are public; this is esentially a struct.

Definition at line 77 of file gauss_jackson_config.hh.

8.4.2 Member Function Documentation

8.4.2.1 GaussJacksonConfig jeod::GaussJacksonConfig::default_configuration() [static]

Creates a GaussJacksonConfig with all members set to -1.

This otherwise invalid value has a special meaning to the validation function. When encountered, the item is silently replaced with the default for that item.

Definition at line 40 of file gauss jackson config.cc.

References absolute_tolerance, final_order, initial_order, max_correction_iterations, ndoubling_steps, priming_technique, and relative_tolerance.

8.4.2.2 GaussJacksonConfig jeod::GaussJacksonConfig::standard_configuration() [static]

Creates a GaussJacksonConfig with all members set to their defaults.

Definition at line 57 of file gauss_jackson_config.cc.

References absolute_tolerance, final_order, initial_order, max_correction_iterations, ndoubling_steps, priming_technique, and relative_tolerance.

Referenced by jeod::GaussJacksonIntegratorConstructor::create_integration_controls(), and validate_configuration().

8.4.2.3 GaussJacksonConfig jeod::GaussJacksonConfig::validate_configuration (const GaussJacksonConfig & config) [static]

Creates a GaussJacksonConfig based on the supplied configuration.

Values of -1 are replaced with their defaults. The standard configuration is used if any invalid item is invalid.

Definition at line 234 of file gauss_jackson_config.cc.

References jeod::set_default_config_values(), standard_configuration(), and jeod::validate_config().

 $Referenced\ by\ jeod:: Gauss Jackson Integrator Constructor:: configure ().$

8.4.3 Friends And Related Function Documentation

8.4.3.1 void init_attrjeod__GaussJacksonConfig() [friend]

8.4.3.2 friend class InputProcessor [friend]

Definition at line 79 of file gauss jackson config.hh.

8.4.4 Field Documentation

8.4.4.1 double jeod::GaussJacksonConfig::absolute_tolerance

Number that indicates the allowable absolute difference for two states to be considered converged.

Defaults to 1e-10.trick units(-)

Definition at line 159 of file gauss jackson config.hh.

Referenced by default_configuration(), jeod::set_default_config_values(), standard_configuration(), and jeod::validate config().

8.4.4.2 unsigned int jeod::GaussJacksonConfig::final_order

The order of the Gauss Jackson integrator once it's operational.

This must be an even number between initial order and 14, inclusive. Defaults to 12.trick units(-)

Definition at line 128 of file gauss_jackson_config.hh.

Referenced by jeod::GaussJacksonStateMachine::configure(), default_configuration(), jeod::GaussJackson-IntegrationControls::GaussJacksonIntegrationControls(), jeod::set_default_config_values(), standard_configuration(), and jeod::validate_config().

8.4.4.3 unsigned int jeod::GaussJacksonConfig::initial_order

The order of the Gauss Jackson integrator immediately after priming.

This must be an even number and must be 14 or less. Defaults to 4.trick_units(-)

Definition at line 121 of file gauss_jackson_config.hh.

Referenced by jeod::GaussJacksonStateMachine::configure(), default_configuration(), jeod::set_default_config_values(), standard_configuration(), and jeod::validate_config().

8.4.4.4 unsigned int jeod::GaussJacksonConfig::max_correction_iterations

Maximum number of correction steps allowed before the integrator is deemed to be not converging.

The algorithm is run in predict-only mode if this limit is zero. The corrector is applied but once with the limit is one. A one-time warning is issued if the limit is 2 or more and if the the algorithm would make more corrections were it not for this limit. Defaults to 10.trick_units(–)

Definition at line 145 of file gauss_jackson_config.hh.

Referenced by jeod::GaussJacksonStateMachine::configure(), default_configuration(), jeod::set_default_config_values(), and standard_configuration().

8.4.4.5 unsigned int jeod::GaussJacksonConfig::ndoubling_steps

The number of time doubling steps involved in the bootstrap operation.

Defaults to (final_order - initial_order)/2.trick_units(-)

Definition at line 134 of file gauss jackson config.hh.

Referenced by jeod::GaussJacksonStateMachine::configure(), default_configuration(), jeod::set_default_config_values(), standard_configuration(), and jeod::validate_config().

8.4.4.6 er7_utils::Integration::Technique jeod::GaussJacksonConfig::priming_technique

The integration technique to be used to prime the Gauss-Jackson process.

Defaults to er7_utils::Integration::Unspecified, the interpretation of which depends on the initial order.trick_units(-)

Definition at line 114 of file gauss jackson config.hh.

Referenced by jeod::GaussJacksonIntegratorConstructor::configure(), default_configuration(), jeod::set_default_configuration(), and standard_configuration().

8.4.4.7 double jeod::GaussJacksonConfig::relative_tolerance

Number that indicates the allowable relative difference for two states to be considered converged.

Defaults to 1e-14.trick_units(-)

Definition at line 152 of file gauss_jackson_config.hh.

Referenced by default_configuration(), jeod::set_default_config_values(), standard_configuration(), and jeod::validate_config().

The documentation for this class was generated from the following files:

8.7 jeod::GaussJacksonIntegrationControls Class Reference

IntegrationControls specialized for Gauss-Jackson integration.

#include <gauss_jackson_integration_controls.hh>

Inheritance diagram for jeod::GaussJacksonIntegrationControls:

Public Member Functions

· GaussJacksonIntegrationControls ()

Default constructor.

 GaussJacksonIntegrationControls (const er7_utils::IntegratorConstructor &priming_constructor, const GaussJacksonConfig &config_in)

Non-default constructor.

• GaussJacksonIntegrationControls (const GaussJacksonIntegrationControls &src)

Copy constructor.

• ~GaussJacksonIntegrationControls () override

Destructor

GaussJacksonIntegrationControls & operator= (GaussJacksonIntegrationControls src)

Copy and swap assignment operator.

er7 utils::IntegrationControls * create copy () const override

Create a duplicate of this object.

• er7_utils::IntegrationControls & get_priming_controls () const

Getter for the priming_controls data member.

· const GaussJacksonCoeffs & get_coeff () const

Getter for the coeff data member.

const GaussJacksonConfig & get_config () const

Getter for the config data member.

· const GaussJacksonStateMachine & get_state_machine () const

Getter for the state_machine data member.

· void reset_integrator () override

Reset the integration controls object.

• unsigned int integrate (double start_time, double sim_dt, er7_utils::TimeInterface &time_interface, er7_utils::IntegratorInterface &integ_interface, er7_utils::BaseIntegrationGroup &integ_group) override

Make one step in the process that eventually integrates state from the start_time to start_time+sim_dt.

Protected Member Functions

virtual void swap (GaussJacksonIntegrationControls &other)

Non-throwing swap function.

Private Member Functions

· void start cycle (double sim dt)

Perform start of integration cycle actions.

- void integrate_edit (er7_utils::TimeInterface &time_interface, er7_utils::BaseIntegrationGroup &integ_group)

 Guide integration while in BootstrapEdit mode.
- void integrate_gj (er7_utils::TimeInterface &time_interface, er7_utils::BaseIntegrationGroup &integ_group)

 Guide integration while in BootstrapStep or Operational mode.

Private Attributes

• er7_utils::IntegrationControls * priming_controls

The integration controls object used to prime the Gauss-Jackson integration process.

· double cycle_starttime

The simulation time of the start of the current integration cycle.

· double cycle simdt

The simulation time span of the current integration cycle.

· double cycle_dyndt

The dynamic time span corresponding to cycle_simdt.

· double reset time

The simulation time of the most recent reset.

· GaussJacksonCoeffs coeff

The Gauss-Jackson corrector and predictor coefficients.

· GaussJacksonConfig config

The Gauss-Jackson configuration data.

· GaussJacksonStateMachine state_machine

The Gauss-Jackson state machine.

· GaussJacksonStateMachine::FsmState fsm state

The state machine's finite state.

• unsigned int max_correction_iterations

Maximum number of correction iterations allowed.

unsigned int initial_order

The order of the Gauss Jackson integrator immediately after priming.

· unsigned int order

The current order of the Gauss Jackson integrator.

· unsigned int edit_count

Number of times that the current set of history have been edited.

bool at_end_of_tour

Flag indicating that the current integration cycle is the last one in an integration tour (i.e., that a major time step will be completed).

8.7.1 Detailed Description

 $Integration Controls\ specialized\ for\ Gauss-Jackson\ integration.$

Definition at line 87 of file gauss_jackson_integration_controls.hh.

8.7.2 Constructor & Destructor Documentation

8.7.2.1 jeod::GaussJacksonIntegrationControls::GaussJacksonIntegrationControls ()

Default constructor.

Definition at line 48 of file gauss_jackson_integration_controls.cc.

8.7.2.2 jeod::GaussJacksonIntegrationControls::GaussJacksonIntegrationControls (const er7_utils::IntegratorConstructor & priming_constructor, const GaussJacksonConfig & config_in)

Non-default constructor.

This is the constructor invoked by the GaussJacksonIntegratorConstructor.

Parameters

priming	Integrator constructor for the technique used during priming.
constructor	
config_in	Gauss-Jackson configuration data.

Definition at line 72 of file gauss jackson integration controls.cc.

References coeff, jeod::GaussJacksonCoeffs::compute_coeffs(), config, jeod::GaussJacksonCoeffs::configure(), jeod::GaussJacksonStateMachine::configure(), jeod::GaussJacksonConfig::final_order, initial_order, priming_controls, and state_machine.

8.7.2.3 jeod::GaussJacksonIntegrationControls::GaussJacksonIntegrationControls (const GaussJacksonIntegrationControls & src)

Copy constructor.

Parameters

src	Object to be copied.
-----	----------------------

Definition at line 102 of file gauss_jackson_integration_controls.cc.

References priming_controls.

8.7.2.4 jeod::GaussJacksonIntegrationControls::~GaussJacksonIntegrationControls(void) [override]

Destructor.

Definition at line 129 of file gauss_jackson_integration_controls.cc.

References priming_controls.

8.7.3 Member Function Documentation

8.7.3.1 er7_utils::IntegrationControls * jeod::GaussJacksonIntegrationControls::create_copy() const [override]

Create a duplicate of this object.

Returns

Replicated GaussJacksonIntegrationControls.

Definition at line 136 of file gauss_jackson_integration_controls.cc.

8.7.3.2 const GaussJacksonCoeffs& jeod::GaussJacksonIntegrationControls::get_coeff() const [inline]

Getter for the coeff data member.

Returns

Reference to the Gauss-Jackson coefficients object.

Definition at line 152 of file gauss_jackson_integration_controls.hh.

References coeff.

8.7.3.3 const GaussJacksonConfig& jeod::GaussJacksonIntegrationControls::get_config() const [inline]

Getter for the config data member.

Returns

Reference to the Gauss-Jackson configuration object.

Definition at line 161 of file gauss_jackson_integration_controls.hh.

References config.

8.7.3.4 er7_utils::IntegrationControls& jeod::GaussJacksonIntegrationControls::get_priming_controls() const [inline]

Getter for the priming_controls data member.

Returns

Reference to the integration controls used during priming.

Definition at line 143 of file gauss_jackson_integration_controls.hh.

References priming controls.

Referenced by jeod::Gauss-JacksonIntegratorConstructor::create_first_order_ode_integrator(), jeod::Gauss-JacksonIntegratorConstructor::create_generalized_deriv_second_order_ode_integrator(), and jeod::Gauss-JacksonIntegratorConstructor::create_second_order_ode_integrator().

8.7.3.5 const GaussJacksonStateMachine& jeod::GaussJacksonIntegrationControls::get_state_machine () const [inline]

Getter for the state_machine data member.

Returns

Reference to the Gauss-Jackson state_machine object.

Definition at line 170 of file gauss_jackson_integration_controls.hh.

References state_machine.

8.7.3.6 unsigned int jeod::GaussJacksonIntegrationControls::integrate (double *start_time*, double *sim_dt*, er7_utils::TimeInterface & *time_interface*, er7_utils::IntegratorInterface & *integ_interface*, er7_utils::BaseIntegrationGroup & *integ_group*) [override]

Make one step in the process that eventually integrates state from the start_time to start_time+sim_dt.

Returns

Step number; zero when finished.

Parameters

in	start_time	The simulation engine time at the start of the integration tour.

in	sim_dt	The difference between the simulation time at the end and start of the integra-
		tion tour.
in,out	time_interface	Object external to the ER7 utilities suite that represents time.
in,out	integ_interface	Interface with the simulation engine for this integration controls.
in,out	integ_group	The integration group that contains this integration controls.

Definition at line 179 of file gauss_jackson_integration_controls.cc.

References at_end_of_tour, jeod::GaussJacksonStateMachine::BootstrapEdit, jeod::GaussJacksonStateMachine::BootstrapStep, cycle_dyndt, cycle_simdt, cycle_starttime, fsm_state, jeod::GaussJacksonStateMachine::get_cycle_scale(), integrate_edit(), integrate_gj(), jeod::GaussJacksonStateMachine::Operational, jeod::GaussJacksonStateMachine::Priming, priming_controls, jeod::GaussJacksonStateMachine::Reset, reset_integrator(), reset_time, start-cycle(), and state_machine.

8.7.3.7 void jeod::GaussJacksonIntegrationControls::integrate_edit (er7_utils::TimeInterface & time_interface, er7_utils::BaseIntegrationGroup & integ_group) [private]

Guide integration while in BootstrapEdit mode.

Definition at line 275 of file gauss jackson integration controls.cc.

References cycle_dyndt, cycle_starttime, edit_count, jeod::GaussJacksonStateMachine::get_history_length(), max_correction_iterations, order, jeod::GaussJacksonStateMachine::set_bootstrap_edit_redo_needed(), and state-machine.

Referenced by integrate().

8.7.3.8 void jeod::GaussJacksonIntegrationControls::integrate_gj (er7_utils::TimeInterface & time_interface, er7_utils::BaseIntegrationGroup & integ_group) [private]

Guide integration while in BootstrapStep or Operational mode.

Definition at line 311 of file gauss_jackson_integration_controls.cc.

References cycle_dyndt, cycle_simdt, cycle_starttime, edit_count, and max_correction_iterations.

Referenced by integrate().

8.7.3.9 GaussJacksonIntegrationControls& jeod::GaussJacksonIntegrationControls::operator= (
GaussJacksonIntegrationControls src) [inline]

Copy and swap assignment operator.

Parameters

src	Object to be copied.

Definition at line 125 of file gauss_jackson_integration_controls.hh.

References swap().

8.7.3.10 void jeod::GaussJacksonIntegrationControls::reset_integrator() [override]

Reset the integration controls object.

Definition at line 167 of file gauss jackson integration controls.cc.

References at_end_of_tour, edit_count, fsm_state, initial_order, order, jeod::GaussJacksonStateMachine::Reset, jeod::GaussJacksonStateMachine::reset(), and state_machine.

Referenced by integrate().

8.7.3.11 void jeod::GaussJacksonIntegrationControls::start_cycle (double sim_dt) [private]

Perform start of integration cycle actions.

Definition at line 344 of file gauss_jackson_integration_controls.cc.

References at_end_of_tour, jeod::GaussJacksonStateMachine::BootstrapEdit, coeff, jeod::GaussJacksonCoeffs::compute_coeffs(), cycle_dyndt, cycle_simdt, cycle_starttime, edit_count, fsm_state, jeod::GaussJacksonStateMachine::get_at_downsample(), jeod::GaussJacksonStateMachine::get_at_end_of_tour(), jeod::GaussJacksonStateMachine::get_at_reinitialize(), jeod::GaussJacksonStateMachine::get_at_reinitialize(), jeod::GaussJacksonStateMachine::get_cycle_scale(), jeod::GaussJacksonStateMachine::get_cycle_scale(), order, jeod::GaussJacksonStateMachine::get_fsm_state(), order, jeod::GaussJackso

Referenced by integrate().

$8.7.3.12 \quad \text{void jeod::} \textbf{GaussJacksonIntegrationControls} \ \& \ \textit{other} \)$

[protected],[virtual]

Non-throwing swap function.

Swap contents of 'this' with that of the other.

Parameters

in	other	Item with which contents are to be swapped.

Definition at line 144 of file gauss_jackson_integration_controls.cc.

References at_end_of_tour, coeff, config, cycle_dyndt, cycle_simdt, cycle_starttime, edit_count, fsm_state, initial_order, max_correction_iterations, order, priming_controls, reset_time, and state_machine.

Referenced by operator=().

8.7.4 Friends And Related Function Documentation

8.7.4.1 void init_attrjeod_GaussJacksonIntegrationControls() [friend]

8.7.4.2 friend class InputProcessor [friend]

Definition at line 89 of file gauss_jackson_integration_controls.hh.

8.7.5 Field Documentation

8.7.5.1 bool jeod::GaussJacksonIntegrationControls::at_end_of_tour [private]

Flag indicating that the current integration cycle is the last one in an integration tour (i.e., that a major time step will be completed).

trick_units(-)

Definition at line 290 of file gauss_jackson_integration_controls.hh.

Referenced by integrate(), reset_integrator(), start_cycle(), and swap().

8.7.5.2 GaussJacksonCoeffs jeod::GaussJacksonIntegrationControls::coeff [private]

The Gauss-Jackson corrector and predictor coefficients.

trick units(-)

Definition at line 249 of file gauss_jackson_integration_controls.hh.

Referenced by GaussJacksonIntegrationControls(), get_coeff(), start_cycle(), and swap().

8.7.5.3 GaussJacksonConfig jeod::GaussJacksonIntegrationControls::config [private]

The Gauss-Jackson configuration data.

trick_units(-)

Definition at line 254 of file gauss_jackson_integration_controls.hh.

Referenced by GaussJacksonIntegrationControls(), get config(), and swap().

8.7.5.4 double jeod::GaussJacksonIntegrationControls::cycle_dyndt [private]

The dynamic time span corresponding to cycle_simdt.

trick_units(s)

Definition at line 239 of file gauss_jackson_integration_controls.hh.

Referenced by integrate(), integrate_edit(), integrate_gj(), start_cycle(), and swap().

8.7.5.5 double jeod::GaussJacksonIntegrationControls::cycle_simdt [private]

The simulation time span of the current integration cycle.

trick_units(-)

Definition at line 234 of file gauss_jackson_integration_controls.hh.

Referenced by integrate(), integrate_gj(), start_cycle(), and swap().

8.7.5.6 double jeod::GaussJacksonIntegrationControls::cycle_starttime [private]

The simulation time of the start of the current integration cycle.

An integration cycle starts when cycle_stage is zero and ends when it reaches zero once again.trick_units(-)

Definition at line 229 of file gauss_jackson_integration_controls.hh.

Referenced by integrate(), integrate_edit(), integrate_gj(), start_cycle(), and swap().

8.7.5.7 unsigned int jeod::GaussJacksonIntegrationControls::edit_count [private]

Number of times that the current set of history have been edited.

trick_units(-)

Definition at line 284 of file gauss_jackson_integration_controls.hh.

Referenced by integrate_edit(), integrate_gj(), reset_integrator(), start_cycle(), and swap().

8.7.5.8 GaussJacksonStateMachine::FsmState jeod::GaussJacksonIntegrationControls::fsm_state [private]

The state machine's finite state.

trick_units(-)

Definition at line 264 of file gauss_jackson_integration_controls.hh.

Referenced by integrate(), reset_integrator(), start_cycle(), and swap().

8.7.5.9 unsigned int jeod::GaussJacksonIntegrationControls::initial_order [private]

The order of the Gauss Jackson integrator immediately after priming.

trick units(-)

Definition at line 274 of file gauss jackson integration controls.hh.

Referenced by GaussJacksonIntegrationControls(), reset_integrator(), and swap().

8.7.5.10 unsigned int jeod::GaussJacksonIntegrationControls::max_correction_iterations [private]

Maximum number of correction iterations allowed.

trick_units(-)

Definition at line 269 of file gauss_jackson_integration_controls.hh.

Referenced by integrate_edit(), integrate_gj(), and swap().

8.7.5.11 unsigned int jeod::GaussJacksonIntegrationControls::order [private]

The current order of the Gauss Jackson integrator.

trick units(-)

Definition at line 279 of file gauss_jackson_integration_controls.hh.

Referenced by integrate_edit(), reset_integrator(), start_cycle(), and swap().

8.7.5.12 er7_utils::IntegrationControls* jeod::GaussJacksonIntegrationControls::priming_controls [private]

The integration controls object used to prime the Gauss-Jackson integration process.

trick_units(-)

Definition at line 222 of file gauss_jackson_integration_controls.hh.

Referenced by GaussJacksonIntegrationControls(), get_priming_controls(), integrate(), swap(), and \sim Gauss-JacksonIntegrationControls().

8.7.5.13 double jeod::GaussJacksonIntegrationControls::reset_time [private]

The simulation time of the most recent reset.

trick units(-)

Definition at line 244 of file gauss_jackson_integration_controls.hh.

Referenced by integrate(), start_cycle(), and swap().

8.7.5.14 GaussJacksonStateMachine jeod::GaussJacksonIntegrationControls::state_machine [private]

The Gauss-Jackson state machine.

trick_units(-)

Definition at line 259 of file gauss jackson integration controls.hh.

Referenced by GaussJacksonIntegrationControls(), get_state_machine(), integrate(), integrate_edit(), reset_integrator(), start_cycle(), and swap().

8.8 jeod::GaussJacksonIntegratorBase < State, Primer > Class Template Reference

Base template class for integrating state via the Gauss-Jackson technique.

```
#include <gauss_jackson_integrator_base.hh>
```

Inheritance diagram for jeod::GaussJacksonIntegratorBase< State, Primer >:

Public Member Functions

• GaussJacksonIntegratorBase ()

Default constructor.

 GaussJacksonIntegratorBase (const er7_utils::IntegratorConstructor &priming_constructor, const Gauss-JacksonIntegrationControls &controls, unsigned int size_in, er7_utils::IntegrationControls &priming_controls)

Non-default constructor.

• GaussJacksonIntegratorBase (const GaussJacksonIntegratorBase &src)

Copy constructor.

∼GaussJacksonIntegratorBase ()

Destructor.

Data Fields

• const GaussJacksonCoeffs * coeff

The summed Adams and Gauss-Jackson coefficients, in ordinate form.

• const GaussJacksonStateMachine * state_machine

The Gauss-Jackson state machine.

• Primer * primer

The integrator used to prime the Gauss-Jackson integration process.

State init_state

The state at the time of the last reset.

· State delinv

Inverse backward differences.

• State corrector sum

Speed hack for the corrector.

er7_utils::DoubleTwoDArray acc_hist

Acceleration history.

• er7_utils::DoubleTwoDArray pos_hist

Position history (or velocity history in case of a first order ODE).

double relative_tolerance

Number that indicates the allowable relative difference for two states to be considered converged.

· double absolute tolerance

Number that indicates the allowable absolute difference for two states to be considered converged.

double velocity_corrector

Correction coefficient for the first integral (velocity).

· double position_corrector

Correction coefficient for the second integral (position).

· GaussJacksonStateMachine::FsmState fsm state

Finite state machine state.

· unsigned int max history size

Maximum history size.

· unsigned int initial_order

Initial order.

· unsigned int order

Current order.

· unsigned int size

State size.

• unsigned int history_length

Current history length.

Protected Member Functions

· void base reset ()

Reset the integrator.

 er7_utils::IntegratorResult base_integrate (double dyn_dt, unsigned int target_stage, double const *deriv, State state)

Propagate state to the specified target_stage.

void swap (GaussJacksonIntegratorBase &other)

Non-throwing swap.

Private Member Functions

• void start cycle (double dt, const double *acc, const State &state)

Start an integration cycle.

bool edit_point (double dt, const double *acc, State &state)

Edit the specified point using the mid-corrector that pertains to the point being edited, which is that at history length.

• bool integrate_gj (double dt, unsigned int target_stage, int advance_index, int target_index, const double *acc, const double *const *ahist, State &state)

Integrate using the Gauss-Jackson predictor and corrector.

void downsample_hist ()

Downsample the acceleration and position histories.

void rotate_acc_hist ()

Rotate the acceleration history.

• er7_utils::IntegratorResult integrate_primer (double dyn_dt, unsigned int target_stage, double const *deriv, State &state)

Integrate state using the primer.

void save_epoch_data (const double *acc, const State &state)

Save epoch data.

• void save_comparison_data (const State &state, double *pos_hist_elem)

Save comparison data.

void initialize_edit_integration_constants (double dt)

Initialize the integration constants (i.e., delinv).

void initialize predictor integration constants (double dt)

Initialize the integration constants (i.e., delinv).

void advance_edit_integration_constants (unsigned int index)

Advance the integration constants by one cycle.

void advance_predictor_integration_constants (unsigned int index)

Advance the integration constants by one cycle.

void mid_correct (unsigned int coeff_idx, double dt, State &state)

Apply a mid-corrector.

void predict (double dt, double const *const *ahist, State &state)

Apply the predictor.

void correct (double dt, const double *acc, State &state)

Apply the corrector.

bool test_for_convergence (const State &state, double *hist_data)

Test for convergence.

• void swap_state (State &item, State &other_item)

Swap state data with another of the same.

void replicate_state (const State &source, State &target)

Replicate state data.

void allocate_state_contents (State &item)

Allocate memory for a state item.

void deallocate_state_contents (State &item)

Deallocate state item memory.

GaussJacksonIntegratorBase & operator= (const GaussJacksonIntegratorBase &)

Not implemented.

Static Private Member Functions

• static Primer * create_primer (const er7_utils::IntegratorConstructor &priming_constructor, unsigned int sizein, er7_utils::IntegrationControls &priming_controls)

Create the integrator to be used during priming.

• static Primer * replicate_primer (const Primer *src)

Create a replica of the provided primer.

8.8.1 Detailed Description

template<typename State, typename Primer>class jeod::GaussJacksonIntegratorBase< State, Primer>

Base template class for integrating state via the Gauss-Jackson technique.

void deallocate state contents (GaussJacksonTwoState &item)

Template Parameters

State	Structure that contains the state.
Primer	Class for priming the Gauss-Jackson integrator.

Definition at line 91 of file gauss jackson integrator base.hh.

8.8.2 Constructor & Destructor Documentation

8.8.2.1 template<typename State, typename Primer > jeod::GaussJacksonIntegratorBase< State, Primer >::GaussJacksonIntegratorBase() [inline]

Default constructor.

Definition at line 196 of file gauss_jackson_integrator_base.hh.

8.8.2.2 template < typename State , typename Primer > jeod::GaussJacksonIntegratorBase < State, Primer >::GaussJacksonIntegratorBase (const er7_utils::IntegratorConstructor & priming_constructor, const GaussJacksonIntegrationControls & controls, unsigned int size_in, er7_utils::IntegrationControls & priming_controls) [inline]

Non-default constructor.

Parameters

priming	Integrator constructor for the technique used during priming.
constructor	
controls	The Gauss-Jackson integration controls that drives this state integrator.
size_in	State size.
priming_controls	Integration controls used during priming.

Definition at line 232 of file gauss_jackson_integrator_base.hh.

References jeod::GaussJacksonIntegratorBase< State, Primer >::acc_hist, er7_utils::TwoDArray< T >::allocate(), jeod::GaussJacksonIntegratorBase< State, Primer >::allocate_state_contents(), jeod::GaussJacksonIntegratorBase< State, Primer >::corrector_sum, jeod::GaussJacksonIntegratorBase< State, Primer >::create_primer(), jeod::GaussJacksonIntegratorBase< State, Primer >::delinv, jeod::GaussJacksonIntegratorBase< State, Primer >::init_state, jeod::GaussJacksonIntegratorBase< State, Primer >::max_history_size, jeod::GaussJacksonIntegratorBase< State, Primer >::pos_hist, jeod::GaussJacksonIntegratorBase< State, Primer >::primer, and jeod::GaussJacksonIntegratorBase< State, Primer >::size.

8.8.2.3 template < typename State , typename Primer > jeod::GaussJacksonIntegratorBase < State, Primer >::GaussJacksonIntegratorBase (const GaussJacksonIntegratorBase < State, Primer > & src) [inline]

Copy constructor.

Parameters

src	Item to be copied.

Definition at line 280 of file gauss_jackson_integrator_base.hh.

References jeod::GaussJacksonTwoState::second.

8.8.3.3 template<typename State, typename Primer > void jeod::GaussJacksonIntegratorBase< State, Primer >::advance_edit_integration_constants (unsigned int index) [private]

Advance the integration constants by one cycle.

Parameters

```
index Coefficient index.
```

Referenced by jeod::GaussJacksonIntegratorBase < State, Primer >::edit_point().

8.8.3.4 template<> void jeod::GaussJacksonIntegratorBase< GaussJacksonOneState,
er7_utils::FirstOrderODEIntegrator >::advance_predictor_integration_constants(unsigned int index) [inline],
[private]

Definition at line 240 of file gauss jackson integrator base first.hh.

References jeod::GaussJacksonOneState::first.

8.8.3.5 template<> void jeod::GaussJacksonIntegratorBase< GaussJacksonTwoState, er7_utils::SecondOrderODEIntegrator >::advance_predictor_integration_constants (unsigned int index) [inline], [private]

Definition at line 240 of file gauss_jackson_integrator_base_second.hh.

References jeod::GaussJacksonTwoState::first.

8.8.3.6 template<typename State , typename Primer > void jeod::GaussJacksonIntegratorBase< State, Primer >::advance_predictor_integration_constants (unsigned int *index*) [private]

Advance the integration constants by one cycle.

Parameters

index	Coefficient index.

Referenced by jeod::GaussJacksonIntegratorBase < State, Primer >::integrate_gj().

Definition at line 385 of file gauss_jackson_integrator_base_first.hh.

References jeod::GaussJacksonOneState::first.

8.8.3.8 template<> void jeod::GaussJacksonIntegratorBase< GaussJacksonTwoState, er7_utils::SecondOrderODEIntegrator >::allocate_state_contents (GaussJacksonTwoState & item) [inline], [private]

Definition at line 390 of file gauss_jackson_integrator_base_second.hh.

References jeod::GaussJacksonTwoState::first, and jeod::GaussJacksonTwoState::second.

8.8.3.9 template<typename State, typename Primer > void jeod::GaussJacksonIntegratorBase< State, Primer >::allocate_state_contents (State & item) [private]

Allocate memory for a state item.

Parameters

item	State item to be allocated.

Referenced by jeod::GaussJacksonIntegratorBase< State, Primer >::GaussJacksonIntegratorBase().

8.8.3.10 template < typename State , typename Primer > er7_utils::IntegratorResult jeod::GaussJacksonIntegrator-Base < State, Primer >::base_integrate (double dyn_dt, unsigned int target_stage, double const * deriv, State state) [inline], [protected]

Propagate state to the specified target stage.

Parameters

in	dyn_dt	Dynamic time step, in dynamic time seconds.
in	target_stage	The stage of the integration process that the integrator should try to attain.
in	deriv	Acceleration vector.
in,out	state	State vector(s).

Returns

The status (time advance, pass/fail status) of the integration.

Definition at line 350 of file gauss jackson integrator base.hh.

Definition at line 222 of file gauss_jackson_integrator_base_first.hh.

8.8.3.28 template < typename State , typename Primer > void jeod::GaussJacksonIntegratorBase < State, Primer >::initialize_predictor_integration_constants (double dt) [private]

Initialize the integration constants (i.e., delinv).

Parameters

dt	Dynamic time step.

Referenced by jeod::GaussJacksonIntegratorBase < State, Primer >::start_cycle().

8.8.3.29 template < typename State, typename Primer > bool jeod::GaussJacksonIntegratorBase < State, Primer >::integrate_gj (double dt, unsigned int target_stage, int advance_index, int target_index, const double * acc, const double *const * ahist, State & state) [inline], [private]

Integrate using the Gauss-Jackson predictor and corrector.

Parameters

in	dt	Dynamic time step, in dynamic time seconds.
in	target_stage	The stage of the integration process that the integrator should try to attain.
in	advance_index	Acceleration history index.
in	target_index	Position history index.
in	acc	Acceleration vector.
in	ahist	Acceleration vector history.
out	state	State vector(s).

Returns

True if step was successful, false otherwise.

8.9 jeod::GaussJacksonIntegratorConstructor Class Reference

Create state and time integrators that propagate using Gauss-Jackson.

#include <gauss_jackson_integrator_constructor.hh>

Inheritance diagram for jeod::GaussJacksonIntegratorConstructor:

Public Member Functions

GaussJacksonIntegratorConstructor (void)

GaussJackson default constructor.

GaussJacksonIntegratorConstructor (const GaussJacksonIntegratorConstructor &src)

GaussJacksonIntegratorConstructor copy constructor.

~GaussJacksonIntegratorConstructor () override

GaussJacksonIntegratorConstructor destructor.

GaussJacksonIntegratorConstructor & operator= (GaussJacksonIntegratorConstructor src)

GaussJacksonIntegratorConstructor assignment operator.

 void configure (const GaussJacksonConfig &config_in, er7_utils::Integration::Technique priming_technique=er7 utils::Integration::Unspecified)

Configure the Gauss-Jackson integrator constructor.

void configure (const GaussJacksonConfig &config_in, const er7_utils::IntegratorConstructor &priming_cotr_in)

Configure the Gauss-Jackson integrator constructor.

const char * get class name (void) const override

Return the class name.

bool implements (er7_utils::Integration::ODEProblemType problem_type) const override

GaussJackson does not implement a 2nd order generalized step integrator.

• bool provides (er7 utils::Integration::ODEProblemType problem type) const override

GaussJackson does not provide a 2nd order generalized step integrator.

virtual void swap (GaussJacksonIntegratorConstructor &src)

Non-throwing swap.

er7 utils::IntegratorConstructor * create copy (void) const override

Create a duplicate of the constructor.

• er7_utils::IntegrationControls * create_integration_controls (void) const override

Create an integration controls that guides the GaussJackson integration process.

 er7_utils::FirstOrderODEIntegrator * create_first_order_ode_integrator (unsigned int size, er7_utils::-IntegrationControls &controls) const override

Create a GaussJackson state integrator for a first order ODE.

 er7_utils::SecondOrderODEIntegrator * create_second_order_ode_integrator (unsigned int size, er7_utils::-IntegrationControls &controls) const override

Create a GaussJackson state integrator for a simple second order ODE.

er7_utils::SecondOrderODEIntegrator * create_generalized_deriv_second_order_ode_integrator (unsigned int position_size, unsigned int velocity_size, const er7_utils::GeneralizedPositionDerivativeFunctions &deriv_funs, er7_utils::IntegrationControls &controls) const override

Create a GaussJackson state integrator for a generalized second order ODE where generalized position is advanced with the use of the position derivative function.

• unsigned int get_buffer_size (void) const override

GaussJackson can use a large number of steps per Trick cycle.

unsigned int get_transition_table_size (void) const override

GaussJackson uses two steps per cycle once primed.

Static Public Member Functions

static

er7 utils::IntegratorConstructor * create constructor (void)

Named constructor; create an GaussJacksonIntegratorConstructor instance.

Private Attributes

er7_utils::IntegratorConstructor * priming_constructor

The integrator constructor that creates the priming integrators.

GaussJacksonConfig config

Data used to configure the Gauss-Jackson integration process.

Friends

8.9.3 Member Function Documentation

8.9.3.1 void jeod::GaussJacksonIntegratorConstructor::configure (const GaussJacksonConfig & config_in, er7_utils::Integration::Technique priming_technique = er7_utils::Integration::Unspecified)

Configure the Gauss-Jackson integrator constructor.

Definition at line 123 of file gauss_jackson_integrator_constructor.cc.

References config, priming_constructor, jeod::GaussJacksonConfig::priming_technique, and jeod::GaussJacksonConfig::validate_configuration().

8.9.3.2 void jeod::GaussJacksonIntegratorConstructor::configure (const GaussJacksonConfig & config_in, const er7 utils::IntegratorConstructor & priming cotr in)

Configure the Gauss-Jackson integrator constructor.

Definition at line 141 of file gauss_jackson_integrator_constructor.cc.

References config, priming_constructor, and jeod::GaussJacksonConfig::validate_configuration().

8.9.3.3 er7_utils::IntegratorConstructor * jeod::GaussJacksonIntegratorConstructor::create_constructor (void) [static]

Named constructor; create an GaussJacksonIntegratorConstructor instance.

The caller is responsible for deleting the returned object.

Returns

Newly created GaussJacksonIntegratorConstructor instance.

Definition at line 71 of file gauss_jackson_integrator_constructor.cc.

8.9.3.4 er7_utils::IntegratorConstructor * jeod::GaussJacksonIntegratorConstructor::create_copy (void) const [override]

Create a duplicate of the constructor.

The caller is responsible for deleting the returned object.

Returns

Duplicated constructor.

Definition at line 152 of file gauss_jackson_integrator_constructor.cc.

8.9.3.5 er7_utils::FirstOrderODEIntegrator * jeod::GaussJacksonIntegratorConstructor::create_first_order_ode_integrator (unsigned int size, er7_utils::IntegrationControls & controls) const [override]

Create a GaussJackson state integrator for a first order ODE.

The caller is responsible for deleting the created object.

Returns

State integrator

Parameters

in	size	State size
in,out	controls	Integration controls

Definition at line 179 of file gauss_jackson_integrator_constructor.cc.

 $References \quad jeod:: cast_to_gj_controls(), \quad jeod:: Gauss Jackson Integration Controls:: get_priming_controls(), \quad and priming_constructor.$

Create a GaussJackson state integrator for a generalized second order ODE where generalized position is advanced with the use of the position derivative function.

The caller is responsible for deleting the created object.

Returns

State integrator

Parameters

in	position_size	Size of the generalized position
in	velocity_size	Size of the generalized velocity
in	deriv_funs	Position derivative functions container
in,out	controls	Integration controls

Definition at line 222 of file gauss jackson integrator constructor.cc.

References jeod::cast_to_gj_controls(), jeod::GaussJacksonIntegrationControls::get_priming_controls(), and priming_constructor.

8.9.3.7 er7_utils::IntegrationControls * jeod::GaussJacksonIntegratorConstructor::create_integration_controls (void) const [override]

Create an integration controls that guides the GaussJackson integration process.

The caller is responsible for deleting the created object.

Returns

Integration controls object

Definition at line 161 of file gauss_jackson_integrator_constructor.cc.

References config, priming constructor, and jeod::GaussJacksonConfig::standard configuration().

8.9.3.8 er7_utils::SecondOrderODEIntegrator * jeod::GaussJacksonIntegratorConstructor::create_second-_order_ode_integrator (unsigned int *size*, er7_utils::IntegrationControls & *controls*) const [override]

Create a GaussJackson state integrator for a simple second order ODE.

The caller is responsible for deleting the created object.

Returns

State integrator

Parameters

in	size	State size
in,out	controls	Integration controls

Definition at line 200 of file gauss jackson integrator constructor.cc.

 $References \quad jeod:: cast_to_gj_controls(), \quad jeod:: Gauss Jackson Integration Controls:: get_priming_controls(), \quad and priming_constructor.$

8.9.3.9 unsigned int jeod::GaussJacksonIntegratorConstructor::get_buffer_size (void) const [inline], [override]

GaussJackson can use a large number of steps per Trick cycle.

The magic number 192 is for order=16, ndboubling=6.

Returns

Always returns 192.

Definition at line 240 of file gauss_jackson_integrator_constructor.hh.

8.9.3.10 const char* jeod::GaussJacksonIntegratorConstructor::get_class_name (void) const [inline], [override]

Return the class name.

Definition at line 147 of file gauss_jackson_integrator_constructor.hh.

8.9.3.11 unsigned int jeod::GaussJacksonIntegratorConstructor::get_transition_table_size (void) const [inline], [override]

GaussJackson uses two steps per cycle once primed.

Returns

Always returns 2.

Definition at line 247 of file gauss_jackson_integrator_constructor.hh.

8.9.3.12 bool jeod::GaussJacksonIntegratorConstructor::implements (er7_utils::Integration::ODEProblemType problem_type) const [inline], [override]

GaussJackson does not implement a 2nd order generalized step integrator.

Definition at line 153 of file gauss_jackson_integrator_constructor.hh.

8.9.3.13 GaussJacksonIntegratorConstructor& jeod::GaussJacksonIntegratorConstructor::operator= (
GaussJacksonIntegratorConstructor src) [inline]

GaussJacksonIntegratorConstructor assignment operator.

Definition at line 119 of file gauss_jackson_integrator_constructor.hh.

References swap().

8.9.3.14 bool jeod::GaussJacksonIntegratorConstructor::provides (er7_utils::Integration::ODEProblemType problem_type) const [inline], [override]

GaussJackson does not provide a 2nd order generalized step integrator.

Definition at line 164 of file gauss_jackson_integrator_constructor.hh.

8.9.3.15 void jeod::GaussJacksonIntegratorConstructor::swap (GaussJacksonIntegratorConstructor & src) [virtual]

Non-throwing swap.

Parameters

in,out	src	Object with which contents are to be swapped.

Definition at line 113 of file gauss_jackson_integrator_constructor.cc.

References config, and priming constructor.

Referenced by operator=().

8.12.1 Detailed Description

Integrates a simple second order ODE using the Gauss-Jackson technique.

The class inherits from er7_utils::SecondOrderODEIntegrator as an is-a relationship (public inheritance) and from GaussJacksonIntegratorBaseSecond as an is-implemented-by relationship (private inheritance). Using composition instead of private inheritance would make Trick 13 checkpoint/restart a lot trickier to implement. With private inheritance, the Trick 13 io_src file contains all the necessary information.

Definition at line 85 of file gauss_jackson_simple_second_order_ode_integrator.hh.

8.12.2 Constructor & Destructor Documentation

8.12.2.1 jeod::GaussJacksonSimpleSecondOrderODEIntegrator::GaussJacksonSimpleSecondOrderODEIntegrator() [inline]

Default constructor.

Definition at line 95 of file gauss_jackson_simple_second_order_ode_integrator.hh.

8.12.2.2 jeod::GaussJacksonSimpleSecondOrderODEIntegrator::GaussJacksonSimpleSecondOrderODEIntegrator (const er7_utils::IntegratorConstructor & priming_constructor, GaussJacksonIntegrationControls & controls, unsigned int size_in, er7_utils::IntegrationControls & priming_controls) [inline]

Non-default constructor.

This is the constructor invoked by the GaussJacksonIntegratorConstructor.

Parameters

priming	Integrator constructor for the technique used during priming.	
constructor		
controls	The Gauss-Jackson integration controls that drives this state integrator.	
size_in	size_in State size.	
priming_controls	Integration controls used during priming.	

Definition at line 113 of file gauss_jackson_simple_second_order_ode_integrator.hh.

8.12.2.3 jeod::GaussJacksonSimpleSecondOrderODEIntegrator::GaussJacksonSimpleSecondOrderODEIntegrator (const GaussJacksonSimpleSecondOrderODEIntegrator & src) [inline]

Copy constructor.

Parameters

src	Item to be copied.

Definition at line 130 of file gauss_jackson_simple_second_order_ode_integrator.hh.

 $\textbf{8.12.2.4} \quad \textbf{jeod::} \textbf{GaussJacksonSimpleSecondOrderODEIntegrator::} \sim \textbf{GaussJacksonSimpleSecondOrderODEIntegrator} (\quad \textbf{)} \\ \quad [\texttt{inline}], [\texttt{override}]$

Destructor.

Definition at line 142 of file gauss_jackson_simple_second_order_ode_integrator.hh.

8.12.3 Member Function Documentation

8.12.3.1 er7_utils::SecondOrderODEIntegrator* jeod::GaussJacksonSimpleSecondOrderODEIntegrator::create_copy(void) const [inline],[override]

Replicate this.

Returns

Replicate of this.

Definition at line 174 of file gauss jackson simple second order ode integrator.hh.

8.12.3.2 er7_utils::IntegratorResult jeod::GaussJacksonSimpleSecondOrderODEIntegrator::integrate (double *dyn_dt*, unsigned int *target_stage*, double const * *acc*, double * *vel*, double * *pos*) [inline], [override]

Propagate state using Gauss-Jackson.

Parameters

in	dyn_dt	Dynamic time step, in dynamic time seconds.
in	target_stage	The stage of the integration process that the integrator should try to attain.
in	acc	Acceleration vector.
in,out	vel	Velocity vector.
in,out	pos	Position vector.

Returns

The status (time advance, pass/fail status) of the integration.

Definition at line 200 of file gauss_jackson_simple_second_order_ode_integrator.hh.

References jeod::GaussJacksonIntegratorBase < State, Primer >::base integrate().

Referenced by jeod::GaussJacksonGeneralizedDerivSecondOrderODEIntegrator::integrate().

8.12.3.3 GaussJacksonSimpleSecondOrderODEIntegrator& jeod::GaussJacksonSimpleSecond-OrderODEIntegrator::operator= (GaussJacksonSimpleSecondOrderODEIntegrator src) [inline]

Copy and swap assignment operator.

Parameters

src	Item to be copied.

Definition at line 150 of file gauss_jackson_simple_second_order_ode_integrator.hh.

References swap().

8.12.3.4 void jeod::GaussJacksonSimpleSecondOrderODEIntegrator::reset_integrator() [inline], [override]

Reset the integrator.

Definition at line 183 of file gauss_jackson_simple_second_order_ode_integrator.hh.

References jeod::GaussJacksonIntegratorBase < State, Primer >::base_reset().

Referenced by jeod::GaussJacksonGeneralizedDerivSecondOrderODEIntegrator::reset_integrator().

8.12.3.5 void jeod::GaussJacksonSimpleSecondOrderODEIntegrator::swap (GaussJacksonSimpleSecondOrderODEIntegrator & other) [inline]

Non-throwing swap.

Parameters

other	Item whose contents are to be swapped with this.

Definition at line 162 of file gauss_jackson_simple_second_order_ode_integrator.hh.

References jeod::GaussJacksonIntegratorBase < State, Primer >::swap().

 $Referenced \ by \ operator = (), \ and \ jeod:: Gauss Jackson Generalized Deriv Second Order ODE Integrator:: swap().$

8.13 jeod::GaussJacksonStateMachine Class Reference

Guides the behavior of the Gauss-Jackson integration process via a finite state machine.

```
#include <gauss_jackson_state_machine.hh>
```

Public Types

enum FsmState {
 Reset, Priming, BootstrapEdit, BootstrapStep,
 Operational }

Specifies the Gauss-Jackson finite state machine states.

Public Member Functions

• GaussJacksonStateMachine ()

Default constructor.

FsmState get_fsm_state () const

Get the finite state machine state.

• unsigned int get_max_history_size () const

Get the maximum history size.

unsigned int get_current_order () const

Get the current order.

• unsigned int get_history_length () const

Get the current history length.

double get_cycle_scale () const

Get the current time scale factor.

double get_cycle_start_time () const

Get the current cycle start time.

• bool get_at_downsample () const

Get the at_downsample flag.

• bool get_at_reinitialize () const

Get the at_reinitialize flag.

• bool get_at_order_change () const

Get the at_order_change flag.

• bool get_at_end_of_tour () const

Get the at_end_of_tour flag.

• void set_bootstrap_edit_redo_needed ()

Tell the state machine that the edit did not pass a convergence test.

• void configure (const GaussJacksonConfig &config)

Configure (or reconfigure) the Gauss-Jackson state machine.

• void reset ()

Reset the Gauss-Jackson state machine.

void perform_step ()

Advance the state machine by one step.

Static Public Member Functions

static std::string state name (FsmState state)

Translates a finite state machine state value to a string.

Private Member Functions

· void transition state ()

Make a state transition.

void exit_priming ()

Make the transition out of Priming.

void exit_bootstrap_edit ()

Make a transition out of BootstrapEdit.

void exit_bootstrap_step ()

Make a transition out of BootstrapStep.

Private Attributes

· unsigned int initial order

The order to be used immediately after priming is complete.

· unsigned int final order

The order to be used in operational mode.

· unsigned int ndoubling steps

The number of times the time step is to be doubled between priming and operational modes.

unsigned int max_correction_iterations

The maximum number of corrections to be performed.

• unsigned int max_history_size

The maximum history size.

· unsigned int tour count

The number of small steps that represent a step to the simulation engine, 2**n_doubling_steps.

• FsmState fsm_state

The finite state machine state.

unsigned int current_order

The current order.

· unsigned int history_size

The current history size, the number of history elements that must be be accumulated to transition to the next state.

· unsigned int history_length

The current history length, the number of history elements that have been accumulated so far.

• unsigned int scale_factor

A power of two that starts at 2**ndoubling_steps and is halved with each downsample.

• unsigned int step_increment

A power of two that starts at 1 and is doubled with each downsample.

unsigned int steps_since_reset

The number of steps since the reset, measured in units of priming cycle steps.

unsigned int correction_iterations

The number of correction iterations made during BoostrapEdit.

• double cycle_scale

The unitless time step size of the current integration cycle, measured in integration tour time step units.

· double cycle start time

The unitless start time of the current integration cycle, measured in integration tour time step units.

· bool bootstrap_edit_redo_needed

Flag indicating that the current edit sequence has failed to converge.

· bool at_downsample

Flag indicating that history data are to be downsampled and the time step is to be doubled.

· bool at reinitialize

Flag indicating that the Gauss-Jackson integration constants are to be reinitialized.

· bool at order change

Flag indicating that the order is to be increased.

bool at_end_of_tour

Flag indicating that the current integration cycle is the last one in an integration tour (i.e., that a major time step will be completed).

Friends

- void init_attrjeod__GaussJacksonStateMachine ()

8.13.1 Detailed Description

Guides the behavior of the Gauss-Jackson integration process via a finite state machine.

The Gauss-Jackson integration process comprises four distinct modes:

- Priming: Using an alternate integrator, the primer, to build the requisite number of data points needed by the initial Gauss-Jackson algorithm.
- Editing: Using a Gauss-Jackson mid-corrector to make the collected data consistent with the Gauss-Jackson technique.
- Stepping: Using a Gauss-Jackson predictor/corrector to build the requisite number of data points needed by the next step of the Gauss-Jackson algorithm.
- · Operational: Using the Gauss-Jackson predictor/corrector at the final user-specified time step and order.

Definition at line 91 of file gauss_jackson_state_machine.hh.

8.13.2 Member Enumeration Documentation

8.13.2.1 enum jeod::GaussJacksonStateMachine::FsmState

Specifies the Gauss-Jackson finite state machine states.

Enumerator

Reset Module was just commanded to reset itself.

Priming Using primer to build initial set of data.

BootstrapEdit Editing primer / lower-level Gauss-Jackson data.

BootstrapStep Building toward downsample / change in order.

Operational At desired rate and order.

Definition at line 98 of file gauss_jackson_state_machine.hh.

8.13.3 Constructor & Destructor Documentation

8.13.3.1 jeod::GaussJacksonStateMachine::GaussJacksonStateMachine ()

Default constructor.

Definition at line 47 of file gauss_jackson_state_machine.cc.

8.13.4 Member Function Documentation

8.13.4.1 void jeod::GaussJacksonStateMachine::configure (const GaussJacksonConfig & config)

Configure (or reconfigure) the Gauss-Jackson state machine.

Definition at line 80 of file gauss_jackson_state_machine.cc.

References jeod::GaussJacksonConfig::final_order, final_order, jeod::GaussJacksonConfig::initial_order, initial_order, jeod::GaussJacksonConfig::max_correction_iterations, max_correction_iterations, max_history_size, jeod::-GaussJacksonConfig::ndoubling_steps, ndoubling_steps, and tour_count.

8.13.6 Field Documentation

8.13.6.1 bool jeod::GaussJacksonStateMachine::at_downsample [private]

Flag indicating that history data are to be downsampled and the time step is to be doubled.

The flag is set on transitions from BootstrapStep to BootstrapEdit when the step size has not yet reached the desired value, clear otherwise.trick_units(–)

Definition at line 322 of file gauss jackson state machine.hh.

Referenced by exit_bootstrap_step(), get_at_downsample(), perform_step(), and reset().

8.13.6.2 bool jeod::GaussJacksonStateMachine::at_end_of_tour [private]

Flag indicating that the current integration cycle is the last one in an integration tour (i.e., that a major time step will be completed).

The flag is set at the start of the cycle that completes the tour, clear otherwise. This flag is never set during BootstrapEdit.trick_units(-)

Definition at line 344 of file gauss_jackson_state_machine.hh.

Referenced by get_at_end_of_tour(), perform_step(), and reset().

8.13.6.3 bool jeod::GaussJacksonStateMachine::at_order_change [private]

Flag indicating that the order is to be increased.

The flag is set on on transitions from BootstrapStep to BootstrapEdit when the order has has not yet reached the desired value, clear otherwise.trick units(-)

Definition at line 336 of file gauss jackson state machine.hh.

Referenced by exit_bootstrap_step(), exit_priming(), get_at_order_change(), perform_step(), and reset().

8.13.6.4 bool jeod::GaussJacksonStateMachine::at_reinitialize [private]

Flag indicating that the Gauss-Jackson integration constants are to be reinitialized.

The flag is set on entry to any state except Reset and Priming, clear otherwise.trick_units(-)

Definition at line 329 of file gauss_jackson_state_machine.hh.

Referenced by exit_bootstrap_edit(), exit_bootstrap_step(), exit_priming(), get_at_reinitialize(), perform_step(), and reset().

8.13.6.5 bool jeod::GaussJacksonStateMachine::bootstrap_edit_redo_needed [private]

Flag indicating that the current edit sequence has failed to converge.

This flag is set externally by the Gauss-Jackson integration controls.trick_units(-)

Definition at line 314 of file gauss_jackson_state_machine.hh.

Referenced by exit_bootstrap_edit(), exit_bootstrap_step(), exit_priming(), and set_bootstrap_edit_redo_needed().

8.13.6.6 unsigned int jeod::GaussJacksonStateMachine::correction_iterations [private]

The number of correction iterations made during BoostrapEdit.

trick_units(-)

Definition at line 293 of file gauss_jackson_state_machine.hh.

Referenced by exit_bootstrap_edit(), exit_bootstrap_step(), exit_priming(), and set_bootstrap_edit_redo_needed().

8.13.6.7 unsigned int jeod::GaussJacksonStateMachine::current_order [private]

The current order.

This is incremented by two on transitions from BootstrapStep to BootstrapEdit until the final_order is reached.trick-_units(-)

Definition at line 257 of file gauss_jackson_state_machine.hh.

Referenced by exit_bootstrap_edit(), exit_bootstrap_step(), exit_priming(), get_current_order(), reset(), and transition_state().

8.13.6.8 double jeod::GaussJacksonStateMachine::cycle_scale [private]

The unitless time step size of the current integration cycle, measured in integration tour time step units.

This starts at 2**(-ndoubling_steps) and doubles with each downsample.trick_units(-)

Definition at line 301 of file gauss_jackson_state_machine.hh.

Referenced by exit_bootstrap_step(), get_cycle_scale(), and reset().

8.13.6.9 double jeod::GaussJacksonStateMachine::cycle_start_time [private]

The unitless start time of the current integration cycle, measured in integration tour time step units.

trick units(-)

Definition at line 307 of file gauss jackson state machine.hh.

 $Referenced\ by\ get_cycle_start_time(),\ perform_step(),\ and\ reset().$

8.13.6.10 unsigned int jeod::GaussJacksonStateMachine::final_order [private]

The order to be used in operational mode.

This must be an even integer and must not be less than initial_order.trick_units(-)

Definition at line 222 of file gauss_jackson_state_machine.hh.

Referenced by configure(), exit_bootstrap_edit(), and exit_bootstrap_step().

8.13.6.11 FsmState jeod::GaussJacksonStateMachine::fsm_state [private]

The finite state machine state.

trick_units(-)

Definition at line 251 of file gauss jackson state machine.hh.

Referenced by exit_bootstrap_edit(), exit_bootstrap_step(), exit_priming(), get_fsm_state(), perform_step(), reset(), set_bootstrap_edit_redo_needed(), and transition_state().

8.13.6.12 unsigned int jeod::GaussJacksonStateMachine::history_length [private]

The current history length, the number of history elements that have been accumulated so far.

trick units(-)

Definition at line 269 of file gauss_jackson_state_machine.hh.

Referenced by exit_bootstrap_edit(), exit_bootstrap_step(), exit_priming(), get_history_length(), perform_step(), and reset().

8.13.6.13 unsigned int jeod::GaussJacksonStateMachine::history_size [private]

The current history size, the number of history elements that must be be accumulated to transition to the next state.

trick units(-)

Definition at line 263 of file gauss_jackson_state_machine.hh.

Referenced by exit_bootstrap_edit(), exit_bootstrap_step(), perform_step(), reset(), and transition_state().

8.13.6.14 unsigned int jeod::GaussJacksonStateMachine::initial_order [private]

The order to be used immediately after priming is complete.

This must be an even, non-negative integer.trick_units(-)

Definition at line 216 of file gauss_jackson_state_machine.hh.

Referenced by configure(), exit_priming(), reset(), and transition_state().

8.13.6.15 unsigned int jeod::GaussJacksonStateMachine::max_correction_iterations [private]

The maximum number of corrections to be performed.

trick units(-)

Definition at line 233 of file gauss_jackson_state_machine.hh.

Referenced by configure(), exit_bootstrap_step(), exit_priming(), and set_bootstrap_edit_redo_needed().

8.13.6.16 unsigned int jeod::GaussJacksonStateMachine::max history size [private]

The maximum history size.

This is calculated for the benefit of state integrators.trick_units(-)

Definition at line 239 of file gauss_jackson_state_machine.hh.

Referenced by configure(), and get max history size().

8.13.6.17 unsigned int jeod::GaussJacksonStateMachine::ndoubling_steps [private]

The number of times the time step is to be doubled between priming and operational modes.

trick_units(-)

Definition at line 228 of file gauss jackson state machine.hh.

Referenced by configure().

8.13.6.18 unsigned int jeod::GaussJacksonStateMachine::scale_factor [private]

A power of two that starts at 2**ndoubling_steps and is halved with each downsample.

When the scale_factor reaches 1 it is time to transition to operational mode.trick_units(-)

Definition at line 276 of file gauss_jackson_state_machine.hh.

Referenced by exit_bootstrap_edit(), exit_bootstrap_step(), and reset().

8.13.6.19 unsigned int jeod::GaussJacksonStateMachine::step_increment [private]

A power of two that starts at 1 and is doubled with each downsample.

trick units(-)

Definition at line 281 of file gauss_jackson_state_machine.hh.

Referenced by exit bootstrap edit(), exit bootstrap step(), perform step(), and reset().

8.13.6.20 unsigned int jeod::GaussJacksonStateMachine::steps_since_reset [private]

The number of steps since the reset, measured in units of priming cycle steps.

The counter is incremented by the step_increment upon completion of a cycle and is reset to zero on entry into BootstrapEdit.trick_units(-)

Definition at line 288 of file gauss_jackson_state_machine.hh.

Referenced by exit_bootstrap_edit(), perform_step(), reset(), and transition_state().

```
8.13.6.21 unsigned int jeod::GaussJacksonStateMachine::tour_count [private]
```

The number of small steps that represent a step to the simulation engine, $2**n_doubling_steps$.

trick units(-)

Definition at line 245 of file gauss_jackson_state_machine.hh.

Referenced by configure(), perform_step(), and reset().

gauss_jackson_two_state.hh

8.15 jeod::GeneralizedSecondOrderODETechnique Class Reference

Enumerates the integration schemes, generalized Cartesian or Lie group integration, and provides simple utilities that work with this.

#include <generalized_second_order_ode_technique.hh>

Public Types

enum TechniqueType { Unspecified, Cartesian, LieGroup }

Enumerates the types of second order ODE solvers that can be used to integrate a generalized second order ODE.

Static Public Member Functions

- static bool is_provided_by (const er7_utils::IntegratorConstructor &generator, TechniqueType technique)

 Test whether an integration method provides an integrator for the specified technique.
- static TechniqueType validate_technique (const er7_utils::IntegratorConstructor &generator, TechniqueType technique, const char *file, unsigned int line, const char *requester, const char *name)

Validate the specified technique with respect to the integration method.

Private Member Functions

• GeneralizedSecondOrderODETechnique ()

Not implemented.

GeneralizedSecondOrderODETechnique (const GeneralizedSecondOrderODETechnique &)

Not implemented.

• ~GeneralizedSecondOrderODETechnique ()

Not implemented.

GeneralizedSecondOrderODETechnique & operator= (const GeneralizedSecondOrderODETechnique &)

Not implemented.

8.15.1 Detailed Description

Enumerates the integration schemes, generalized Cartesian or Lie group integration, and provides simple utilities that work with this.

Definition at line 86 of file generalized_second_order_ode_technique.hh.

8.15.2 Member Enumeration Documentation

8.15.2.1 enum jeod::GeneralizedSecondOrderODETechnique::TechniqueType

Enumerates the types of second order ODE solvers that can be used to integrate a generalized second order ODE.

Enumerator

Unspecified No technique specified (an error).

Cartesian Integrate using a generalized derivative scheme. The integrator treats generalized position as if it lives in some Cartesian space.

LieGroup Integrate using a generalized step scheme. The integrator treats generalized position as if it lives in some Lie group.

Definition at line 97 of file generalized_second_order_ode_technique.hh.

8.15.3 Constructor & Destructor Documentation

 $\textbf{8.15.3.1} \quad \textbf{jeod::} \textbf{GeneralizedSecondOrderODETechnique::} \textbf{GeneralizedSecondOrderODETechnique} (\ \textbf{)} \quad \texttt{[private]}$

Not implemented.

8.15.3.2 jeod::GeneralizedSecondOrderODETechnique::GeneralizedSecondOrderODETechnique (const GeneralizedSecondOrderODETechnique &) [private]

Not implemented.

8.15.3.3 jeod::GeneralizedSecondOrderODETechnique::~GeneralizedSecondOrderODETechnique() [private]

Not implemented.

8.15.4 Member Function Documentation

8.15.4.1 bool jeod::GeneralizedSecondOrderODETechnique::is_provided_by (const er7_utils::IntegratorConstructor & generator, TechniqueType technique) [static]

Test whether an integration method provides an integrator for the specified technique.

Parameters

in	generator	Integrator constructor for the integration technique.
in	technique	Technique to be queried.

Returns

True if the constructor can create an integrator for the specified technique, false otherwise.

Definition at line 46 of file generalized_second_order_ode_technique.cc.

References Cartesian, jeod::IntegrationMessages::invalid_request, LieGroup, and Unspecified.

Referenced by validate technique().

8.15.4.2 GeneralizedSecondOrderODETechnique& jeod::GeneralizedSecondOrderODETechnique::operator=(const GeneralizedSecondOrderODETechnique &) [private]

Not implemented.

8.15.4.3 GeneralizedSecondOrderODETechnique::TechniqueType jeod::GeneralizedSecondOrderODETechnique
::validate_technique (const er7_utils::IntegratorConstructor & generator, TechniqueType technique, const char *
file, unsigned int line, const char * requester, const char * name) [static]

Validate the specified technique with respect to the integration method.

Possible outcomes are:

- Failure if the generator doesn't provide either of the generalized second order ODE integrators.
- Switch to plan B if the generator doesn't provide the requested integrator but does provide the alternate technique.
- Nothing happens if the generator does provide the requested integrator.

Parameters

in	generator	Integrator constructor for the integration technique.
in	technique	Technique to be queried.
in	file	Typically FILE
in	line	Typically LINE
in	requester	Something to identify the caller.
in	name	The name of the object associated with the caller.

Returns

Input technique if supported, alternate if not. The function does not return is neither of the options is supported.

Definition at line 73 of file generalized second order ode technique.cc.

References Cartesian, jeod::IntegrationMessages::invalid_request, is_provided_by(), LieGroup, and jeod::IntegrationMessages::unsupported_option.

8.16 jeod::IntegrationMessages Class Reference

Declares messages associated with the integration test model.

#include <integration_messages.hh>

Static Public Attributes

- static char const * unsupported_option = "utils/integration/" "unsupported_option" Issued when some user input is invalid.
- static char const * invalid item = "utils/integration/" "invalid item"

Issued when an item is somehow invalid; a duplicate entry for example.

• static char const * internal_error = "utils/integration/" "internal_error"

Issued when the JEOD programmer messed up.

• static char const * invalid_request = "utils/integration/" "invalid_request"

Issued when a non-JEOD programmer messed up.

static char const * information = "utils/integration/" "information"
 Issued in non-error messages.

Private Member Functions

• IntegrationMessages (void)

Not implemented.

IntegrationMessages (const IntegrationMessages &)

Not implemented.

• IntegrationMessages & operator= (const IntegrationMessages &)

Not implemented.

Friends

8.17 jeod::JeodIntegrationGroup Class Reference

A JeodIntegrationGroup integrates the state of a set of objects over time.

```
#include <jeod_integration_group.hh>
```

Inheritance diagram for jeod::JeodIntegrationGroup:

Public Member Functions

• JeodIntegrationGroup ()

JeodIntegrationGroup default constructor, needed for checkpoint/restart, and to support derived classes' default constructors.

• JeodIntegrationGroup (JeodIntegrationGroupOwner & wner, er7_utils::IntegratorConstructor & integ_cotr, JeodIntegratorInterface & integ_inter, JeodIntegrationTime & time_mngr)

JeodIntegrationGroup non-default constructor.

• ~JeodIntegrationGroup () override

JeodIntegrationGroup destructor.

· bool need_first_step_derivatives (void) const

Indicate whether derivatives need to be calculated on the initial step of an integration cycle.

void update_from_owner (void)

Update the group via its owner.

bool merge_integrator_result (const er7_utils::IntegratorResult &new_result, er7_utils::IntegratorResult &merged_result) const

Merge an IntegratorResult into another.

void respond_to_time_change () override

Respond to a change in the nature of time.

· void initialize_group () override

Initialize the integration group.

· void reset body integrators (void) override

Reset the integrators for the integrable objects managed by this group.

er7_utils::IntegratorResult integrate_bodies (double cycle_dyndt, unsigned int target_stage) override

Integrate the states of the integrable objects managed by this group.

virtual void add_integrable_object (er7_utils::IntegrableObject &integrable_object)

Add an integrable object to the vector of such.

• virtual void remove integrable object (er7 utils::IntegrableObject &integrable object)

Remove an integrable object from the vector of such.

Static Public Member Functions

· static void register classes ()

Register classes associated with integration.

Protected Member Functions

 template<typename T > void reset container (const T &container)

Issue a reset to each member of a container.

• template<typename T >

er7_utils::IntegratorResult integrate_container (double dyn_dt, unsigned int target_stage, const T &container)

Integrate each member of a collection.

Protected Attributes

JeodIntegrationGroupOwner *const group owner

The object that owns this integration group, typically by containment.

• er7_utils::IntegratorResultMergerContainer integ_merger

The object that merges results from multiple integrators.

JeodIntegratorInterface *const jeod_integ_interface

The interface between the integration module and the simulation engine's integration structure.

JeodIntegrationTime *const jeod_time_manager

The interface between the integration module and the object that represents time.

JeodPointerVector

```
< er7_utils::IntegrableObject >
```

::type integrable_objects

The objects whose states are integrated by this integration group.

Private Member Functions

JeodIntegrationGroup (const JeodIntegrationGroup &)

Not implemented.

JeodIntegrationGroup & operator= (const JeodIntegrationGroup &)

Not implemented.

Friends

- · class InputProcessor

8.17.1 Detailed Description

A JeodIntegrationGroup integrates the state of a set of objects over time.

This class is designed for extensibility. Authors of derived classes should follow the extension notes in the source file.

Definition at line 119 of file jeod_integration_group.hh.

8.17.2 Constructor & Destructor Documentation

8.17.2.1 jeod::JeodIntegrationGroup::JeodIntegrationGroup ()

JeodIntegrationGroup default constructor, needed for checkpoint/restart, and to support derived classes' default constructors.

Definition at line 63 of file jeod_integration_group.cc.

References integrable_objects, and register_classes().

8.17.2.2 jeod::JeodIntegrationGroup::JeodIntegrationGroup (JeodIntegrationGroupOwner & owner, er7_utils::IntegratorConstructor & integ_cotr, JeodIntegratorInterface & integ_inter, JeodIntegrationTime & time_mngr)

JeodIntegrationGroup non-default constructor.

Parameters

in	owner	The object that contains this group.
in	integ_cotr	Integrator constructor
in	integ_inter	Integrator interface
in	time_mngr	Time manager

Definition at line 79 of file jeod_integration_group.cc.

References jeod::JeodIntegrationTime::add_time_change_subscriber(), integ_merger, integrable_objects, and register_classes().

8.17.2.3 jeod::JeodIntegrationGroup:: \sim JeodIntegrationGroup() [override]

JeodIntegrationGroup destructor.

Definition at line 102 of file jeod_integration_group.cc.

References integrable_objects, jeod_time_manager, and jeod::JeodIntegrationTime::remove_time_change_subscriber().

8.17.2.4 jeod::JeodIntegrationGroup::JeodIntegrationGroup (const JeodIntegrationGroup &) [private]

Not implemented.

8.17.3 Member Function Documentation

8.17.3.1 void jeod::JeodIntegrationGroup::add_integrable_object (er7_utils::IntegrableObject & integrable_object)

[virtual]

Add an integrable object to the vector of such.

Parameters

in	integrable_object	Object to be added.

Definition at line 114 of file jeod_integration_group.cc.

References integrable_objects.

8.17.3.2 void jeod::JeodIntegrationGroup::initialize_group() [override]

Initialize the integration group.

Some integration techniques are configurable by user input, and thus the creation of the controls and integrators needs to be delayed a bit.

Definition at line 176 of file jeod integration group.cc.

References integrable_objects.

8.17.3.3 er7_utils::IntegratorResult jeod::JeodIntegrationGroup::integrate_bodies (double *cycle_dyndt*, unsigned int *target_stage*) [inline], [override]

Integrate the states of the integrable objects managed by this group.

This function should only be called by IntegrationControls::integrate or by an override of that function. Derived classes are free to override this default implementation. However, those derived class overrides either must call this method to integrate the states of the registered integrable bodies or must somehow take on the burden of integrating those states.

Parameters

in	cycle_dyndt	Dynamic time step, in dynamic time seconds.
in	target_stage	The stage of the integration process that the integrator should try to attain.

Returns

The status (time advance, pass/fail status) of the integration.

Definition at line 245 of file jeod integration group.hh.

References integrable_objects, and integrate_container().

8.17.3.4 template < typename T > er7_utils::IntegratorResult jeod::JeodIntegrationGroup::integrate_container (double *dyn_dt*, unsigned int *target_stage*, const T & *container*) [inline], [protected]

Integrate each member of a collection.

Template Parameters

T The container type.

Parameters

in	dyn_dt	Dynamic time step, in dynamic time seconds.
in	target_stage	The stage of the integration process that the integrator should try to attain.
in,out	container	The container to be integrated.

Definition at line 300 of file jeod_integration_group.hh.

References integ_merger.

Referenced by integrate_bodies().

8.17.3.5 bool jeod::JeodIntegrationGroup::merge_integrator_result (const er7_utils::IntegratorResult & new_result, er7_utils::IntegratorResult & merged_result) const [inline]

Merge an IntegratorResult into another.

Returns

True if merger was successful, false if some error occurred.

Parameters

in	new_result	Size of the generalized position vector
in,out	merged_result	Size of the generalized position vector

Definition at line 190 of file jeod_integration_group.hh.

References integ_merger.

8.17.3.6 bool jeod::JeodIntegrationGroup::need_first_step_derivatives (void) const [inline]

Indicate whether derivatives need to be calculated on the initial step of an integration cycle.

Returns

Desired flag.

Definition at line 171 of file jeod_integration_group.hh.

8.17.3.7 JeodIntegrationGroup& jeod::JeodIntegrationGroup::operator= (const JeodIntegrationGroup &) [private]

Not implemented.

8.17.3.8 void jeod::JeodIntegrationGroup::register_classes() [static]

Register classes associated with integration.

This is a static method, and is best called prior to initialization time.

Definition at line 53 of file jeod_integration_group.cc.

Referenced by JeodIntegrationGroup().

8.17.3.9 void jeod::JeodIntegrationGroup::remove_integrable_object (er7_utils::IntegrableObject & integrable_object) [virtual]

Remove an integrable object from the vector of such.

Parameters

in	integrable_object	Object to be removed.

Definition at line 145 of file jeod_integration_group.cc.

References integrable_objects, and jeod::IntegrationMessages::invalid_item.

8.17.3.10 void jeod::JeodIntegrationGroup::reset_body_integrators(void) [inline], [override]

Reset the integrators for the integrable objects managed by this group.

Resets can occur when time changes behavior (call is internal to the integration process) or when some external event would render an integrator's history invalid (call comes from outside). When either happens, integrators that depend on history need to reset their internal state to indicate that the saved data are invalid.)

Definition at line 227 of file jeod_integration_group.hh.

References integrable objects, and reset container().

8.17.3.11 template < typename T > void jeod::JeodIntegrationGroup::reset_container (const T & container) [inline], [protected]

Issue a reset to each member of a container.

Template Parameters

T	The container type.

Parameters

in,out	container	The container to be reset.

Definition at line 279 of file jeod_integration_group.hh.

Referenced by reset_body_integrators().

8.17.3.12 void jeod::JeodIntegrationGroup::respond_to_time_change() [inline], [override], [virtual]

Respond to a change in the nature of time.

Implements jeod::TimeChangeSubscriber.

Definition at line 205 of file jeod_integration_group.hh.

8.17.3.13 void jeod::JeodIntegrationGroup::update_from_owner(void) [inline]

Update the group via its owner.

Definition at line 179 of file jeod integration group.hh.

References group_owner, and jeod::JeodIntegrationGroupOwner::update_integration_group().

8.17.4 Friends And Related Function Documentation

8.17.4.1 void init_attrjeod__JeodIntegrationGroup() [friend]

8.17.4.2 friend class InputProcessor [friend]

Definition at line 123 of file jeod_integration_group.hh.

- · class InputProcessor
- void init_attrjeod__LsodeControlDataInterface ()

8.20.1 Detailed Description

Specifies controls for an LSODE integrator.

Definition at line 83 of file lsode_control_data_interface.hh.

8.20.2 Member Enumeration Documentation

8.20.2.1 enum jeod::LsodeControlDataInterface::CorrectorMethod

Enumerator

FunctionalIteration Functional iteration.

NewtonIterUserJac Modified Newton iteration with.

NewtonIterInternalJac Modified Newton iteration with internally. **JacobiNewtonInternalJac** Modified Jacobi-Newton iteration with.

NewtonIterUserBandJac Modified Newton iteration with.

NewtonIterInternalBandJac Modified Newton iteration with internally.

Definition at line 103 of file Isode_control_data_interface.hh.

8.20.2.2 enum jeod::LsodeControlDataInterface::ErrorControlIndicator

Enumerator

CommonAbsCommonRel Use the same absolute and relative values.

SpecificAbsCommonRel Use separate absolute values for each.

CommonAbsSpecificRel Use a common absolute values and separate.

SpecificAbsSpecificRel Use separate absolute and relative values.

Definition at line 122 of file lsode_control_data_interface.hh.

8.20.2.3 enum jeod::LsodeControlDataInterface::IntegrationMethod

Enumerator

ImplicitAdamsNonStiff Variable-step, variable-order, implicit Adams.ImplicitBackDiffStiff Variable-step, variable-order, implicit.

Definition at line 92 of file lsode_control_data_interface.hh.

8.20.3 Constructor & Destructor Documentation

8.20.3.1 virtual jeod::LsodeControlDataInterface::~LsodeControlDataInterface(void) [inline], [virtual]

Destructor.

Definition at line 137 of file Isode_control_data_interface.hh.

References destroy_allocated_arrays().

8.20.4 Member Function Documentation

8.20.4.1 bool jeod::LsodeControlDataInterface::is_corrector_method_functional_iteration() [inline]

Tests whether corrector is functional iteration.

Definition at line 154 of file Isode control data interface.hh.

Referenced by jeod::LsodeFirstOrderODEIntegrator::integrator_core(), jeod::LsodeFirstOrderODEIntegrator::integrator_corrector_failed_part1(), jeod::LsodeFirstOrderODEIntegrator::integrator_corrector_failed_part2(), jeod::LsodeFirstOrderODEIntegrator::integrator_corrector_iteration(), jeod::LsodeFirstOrderODEIntegrator::integrator_fail_reset_order_1_part2(), jeod::LsodeFirstOrderODEIntegrator::integrator_predict(), and jeod::LsodeFirstOrderODEIntegrator::integrator_predict(), and jeod::LsodeFirstOrderODEIntegrator::manager_initialize_calculation_part1().

8.20.4.2 LsodeControlDataInterface& jeod::LsodeControlDataInterface::operator= (const LsodeControlDataInterface & src) [private]

8.20.5 Friends And Related Function Documentation

8.20.5.1 void init_attrjeod__LsodeControlDataInterface() [friend]

8.20.5.2 friend class InputProcessor [friend]

Definition at line 85 of file Isode control data interface.hh.

8.20.6 Field Documentation

8.20.6.1 double* jeod::LsodeControlDataInterface::abs_tolerance_error_control

Was ATOL.

Vector of the absolute error tolerances.trick_units(-)

Definition at line 178 of file lsode_control_data_interface.hh.

Referenced by allocate_arrays(), destroy_allocated_arrays(), jeod::LsodeFirstOrderODEIntegrator::load_ew_values(), jeod::LsodeFirstOrderODEIntegrator::manager_initialize_calculation_part2(), and set_abs_tol().

8.20.6.2 std::vector<double> jeod::LsodeControlDataInterface::abs_tolerance_error_control_vec

Temporary pre-initialized place to store loaded error values.

trick_units(-)

Definition at line 166 of file lsode_control_data_interface.hh.

Referenced by allocate arrays(), check interface data(), LsodeControlDataInterface(), and set abs tol().

8.20.6.3 CorrectorMethod jeod::LsodeControlDataInterface::corrector_method

Was MITER, in DLS001 common block.

trick_units(-)

Definition at line 201 of file lsode_control_data_interface.hh.

Referenced by check_interface_data(), jeod::LsodeFirstOrderODEIntegrator::jacobian_prep_init(), jeod::LsodeFirstOrderODEIntegrator::jacobian_prep_wrap_up(), jeod::LsodeFirstOrderODEIntegrator::jacobian_prep_wrap_up(), jeod::LsodeFirstOrderODEIntegrator::manager_initialize_calculation_part1().

8.20.6.4 ErrorControlIndicator jeod::LsodeControlDataInterface::error_control_indicator

Was ITOL.

trick units(-)

Definition at line 155 of file Isode control data interface.hh.

Referenced by check_interface_data(), jeod::LsodeFirstOrderODEIntegrator::load_ew_values(), and jeod::LsodeFirstOrderODEIntegrator::manager_initialize_calculation_part2().

8.20.6.5 bool jeod::LsodeControlDataInterface::error_control_vector_copied_over

Definition at line 173 of file Isode control data interface.hh.

Referenced by allocate_arrays(), check_interface_data(), destroy_allocated_arrays(), set_abs_tol(), and set_rel_tol().

8.20.6.6 double jeod::LsodeControlDataInterface::initial_step_size

Was H0.

Initial guess at the step size. May be input, will be calculated if not. Note - this is the actual step, not the magnitude of the step. whereas max step size and min step size are magnitudes.trick units(-)

Definition at line 221 of file lsode_control_data_interface.hh.

Referenced by jeod::LsodeFirstOrderODEIntegrator::manager_initialize_calculation_part2(), jeod::LsodeFirstOrderODEIntegrator::process_entry_point_cycle_start(), and jeod::LsodeFirstOrderODEIntegrator::reset_integrator().

8.20.6.7 IntegrationMethod jeod::LsodeControlDataInterface::integration_method

Was METH, in DLS001 common block.

trick_units(-)

Definition at line 196 of file Isode control data interface.hh.

Referenced by jeod::LsodeFirstOrderODEIntegrator::calculate_integration_coefficients(), check_interface_data(), jeod::LsodeFirstOrderODEIntegrator::integrator_core(), and jeod::LsodeFirstOrderODEIntegrator::update_control_data().

8.20.6.8 unsigned int jeod::LsodeControlDataInterface::max_correction_iters

Was MAXCOR, in DLS001 common block Maximum number of corrector-iterations to attempt on any step.

trick units(-)

Definition at line 238 of file lsode_control_data_interface.hh.

Referenced by jeod::LsodeFirstOrderODEIntegrator::integrator_corrector_iteration().

8.20.6.9 unsigned int jeod::LsodeControlDataInterface::max_num_conv_failure

Was MXNCF, in DLS001 common block.

Maximum number of convergence failures on one step.trick_units(-)

Definition at line 248 of file Isode_control_data_interface.hh.

Referenced by jeod::LsodeFirstOrderODEIntegrator::integrator_corrector_failed_part2().

8.20.6.10 unsigned int jeod::LsodeControlDataInterface::max_num_small_step_warnings

Was MXHNILI, in DLS001 common block.

Populated from IWORK[7] Maximum number of small-step warnings that may be printed.trick units(-)

Definition at line 233 of file Isode control data interface.hh.

Referenced by check_interface_data(), and jeod::LsodeFirstOrderODEIntegrator::manager_integration_loop_-part2().

8.20.6.11 unsigned int jeod::LsodeControlDataInterface::max_num_steps

Was MXSTEP, in DLS001 common block.

Maximum number of steps that the integrator may take. Default = 500.trick_units(-)

Definition at line 253 of file Isode control data interface.hh.

Referenced by check_interface_data(), and jeod::LsodeFirstOrderODEIntegrator::manager_integration_loop_part1().

8.20.6.12 unsigned int jeod::LsodeControlDataInterface::max_num_steps_jacobian

Was MSBP, in DLS001 common block.

Populated from IWORK[6] Maximum number of steps for which the same Jacobian can be used.trick_units(-)

Definition at line 243 of file Isode control data interface.hh.

Referenced by jeod::LsodeFirstOrderODEIntegrator::integrator_predict().

8.20.6.13 unsigned int jeod::LsodeControlDataInterface::max_order

Was MAXORD, in DLS001 common block.

Populated from IWORK[5] Maximum order allowable.trick_units(-)

Definition at line 228 of file lsode_control_data_interface.hh.

Referenced by check_interface_data(), and jeod::LsodeFirstOrderODEIntegrator::update control data().

8.20.6.14 double jeod::LsodeControlDataInterface::max_step_size

was HMAX.

RWORK[6] Maximum absolute value of step size allowable. Default to 0.0, interpreted as infinity. user-specified otherwise.trick units(–)

Definition at line 214 of file Isode_control_data_interface.hh.

Referenced by check_interface_data(), and jeod::LsodeFirstOrderODEIntegrator::update_control_data().

8.20.6.15 double jeod::LsodeControlDataInterface::min_step_size

was HMIN, in DLS001 common block.

Minimum absolute value of step size allowable. Default to 0.0, user-specified otherwise.trick_units(-)

Definition at line 208 of file Isode_control_data_interface.hh.

Referenced by check_interface_data(), jeod::LsodeFirstOrderODEIntegrator::integrator_core(), jeod::LsodeFirstOrderODEIntegrator::integrato

DEIntegrator::integrator_reset_method_coeffs(), jeod::LsodeFirstOrderODEIntegrator::integrator_set_new_order(), and jeod::LsodeFirstOrderODEIntegrator::manager_integration_loop_part3().

8.20.6.16 unsigned int jeod::LsodeControlDataInterface::num_odes

Was N, in DLS001 common block.

Number of ODEs to be solved at next step. In this implementation, num_odes = num_equations. In original implementation, num_odes (N) was set to NEQ at the start, the some subset could be identified, NYH and solved for.trick_units(-)

Definition at line 191 of file Isode control data interface.hh.

Referenced by allocate arrays(), check interface data(), jeod::LsodeFirstOrderODEIntegrator::gauss elimjeod::LsodeFirstOrderODEIntegrator::integrator compute new order(), jeod::LsodeFirstOrderODE-Integrator::integrator compute new order prep(), jeod::LsodeFirstOrderODEIntegrator::integrator corrector jeod::LsodeFirstOrderODEIntegrator::integrator corrector iteration(), converged(), jeod::LsodeFirstOrderOD-EIntegrator::integrator fail reset order 1 part1(), jeod::LsodeFirstOrderODEIntegrator::integrator fail reset order_1_part2(), jeod::LsodeFirstOrderODEIntegrator::integrator_reset_iteration_loop_part1(), jeod::LsodeFirst-OrderODEIntegrator::integrator_reset_iteration_loop_part2(), jeod::LsodeFirstOrderODEIntegrator::integratorjeod::LsodeFirstOrderODEIntegrator::integrator_wrapup(), jeod::LsodeFirstOrderODEIntegrator-::interpolate_y(), jeod::LsodeFirstOrderODEIntegrator::jacobian_prep_init(), jeod::LsodeFirstOrderODEIntegrator-::jacobian_prep_loop(), jeod::LsodeFirstOrderODEIntegrator::jacobian_prep_wrap_up(), jeod::LsodeFirstOrderOD-EIntegrator::linear_chord_iteration(), jeod::LsodeFirstOrderODEIntegrator::linear_solver(), jeod::LsodeFirstOrder-ODEIntegrator::load_derivatives(), jeod::LsodeFirstOrderODEIntegrator::load_ew_values(), jeod::LsodeFirstOrder-ODEIntegrator::LsodeFirstOrderODEIntegrator(), jeod::LsodeFirstOrderODEIntegrator::magnitude of weightedarray(), jeod::LsodeFirstOrderODEIntegrator::manager initialize calculation part1(), jeod::LsodeFirstOrderOD-EIntegrator::manager initialize calculation part2(), jeod::LsodeFirstOrderODEIntegrator::manager integration loop part1(), jeod::LsodeFirstOrderODEIntegrator::process entry point cycle start(), and jeod::LsodeFirstOrder-ODEIntegrator::reset integrator().

8.20.6.17 unsigned int jeod::LsodeControlDataInterface::num_odes_at_alloc

Definition at line 174 of file lsode_control_data_interface.hh.

Referenced by allocate arrays(), set abs tol(), and set rel tol().

8.20.6.18 double* jeod::LsodeControlDataInterface::rel_tolerance_error_control

Was RTOL.

Vector of the relative error tolerances.trick units(-)

Definition at line 182 of file Isode control data interface.hh.

Referenced by allocate_arrays(), destroy_allocated_arrays(), jeod::LsodeFirstOrderODEIntegrator::load_ew_values(), jeod::LsodeFirstOrderODEIntegrator::manager_initialize_calculation_part2(), and set_rel_tol().

8.20.6.19 std::vector<double> jeod::LsodeControlDataInterface::rel_tolerance_error_control_vec

Temporary pre-initialized place to store loaded error values.

trick units(-)

Definition at line 171 of file lsode_control_data_interface.hh.

Referenced by allocate_arrays(), check_interface_data(), LsodeControlDataInterface(), and set_rel_tol().

8.21 jeod::LsodeDataArrays Class Reference

```
The data arrays.
```

```
#include <lsode_data_classes.hh>
```

Public Member Functions

virtual ~LsodeDataArrays (void)

Destructor.

LsodeDataArrays (void)

constructor

void allocate_arrays (unsigned int num_odes, LsodeControlDataInterface::CorrectorMethod corrector_method)

Allocates memory for the variable size arrays.

void destroy_allocated_arrays ()

Allows for refactoring and reallocation of newly sized arrays.

Data Fields

```
int * pivots
```

Was IWM(21) or IPVT.

double ** history

was RWORK[LYH:LYH+NYH*(MAXORD+1)-1].

- double lin alg 1
- double lin_alg_2
- double ** lin_alg

was RWORK[LWM:LWM+LENWM-1].

8.24 jeod::LsodeFirstOrderODEIntegrator Class Reference

Jeod-compatible version of the Livermore ODE solver, LSODE.

```
#include <lsode_first_order_ode_integrator.hh>
```

Inheritance diagram for jeod::LsodeFirstOrderODEIntegrator:

Public Types

- enum EntryPoint {
 CycleStartFinish = 0, InitCalc = 1, JacobianPrep = 2, ResetIterLoop = 3, IterationLoop = 4, DstodeResetStep = 5 }
- enum CalculationTask {
 Normal = 1, OneStep = 2, CompleteCycle = 3, NormalWithSingularity = 4,
 OneStepWithSingularity = 5 }

Public Member Functions

LsodeFirstOrderODEIntegrator (void)

LsodeFirstOrderODEIntegrator default constructor.

LsodeFirstOrderODEIntegrator (const LsodeControlDataInterface &data_in, er7_utils::IntegrationControls &controls, unsigned int size)

LsodeFirstOrderODEIntegrator non-default constructor.

~LsodeFirstOrderODEIntegrator () override

LsodeFirstOrderODEIntegrator destructor.

LsodeFirstOrderODEIntegrator * create_copy () const override

Create a copy of 'this' LsodeFirstOrderODEIntegrator object.

EntryPoint get_re_entry_point ()

Get re_entry_point member.

er7_utils::IntegratorResult integrate (double dyn_dt, unsigned int target_stage, double const *y_dot, double
 *y) override

Propagate state via Lsode's method.

void reset_integrator () override

Resets the integrator when the timestep changes or when identified as needing a reset.

void update_control_data ()

Gets the control data from where it can be populated in the constructor and verifies that the input control parameters are not out of sensible range.

Data Fields

double * y

Was Y.

const double * y_dot

Was .

• double cycle_target_time

Was TOUT.

· double convergence_factor

was CONIT, in DLS001 common block.

· double convergence_rate

was CRATE, in DLS001 common block.

unsigned int order_select_para

Was IALTH, in DLS001 common block.

• unsigned int num_equations

Was NYH, in DLS001 common block.

· unsigned int num nordsiek cols

Was L, in DLS001 common block Number of columns in Nordsiek array.

• unsigned int max_history_size

Was LMAX, in DLS001 common block Maximum allowable number of histories.

• unsigned int num_predictor_elements

Was NQNYH, in DLS001 common block.

· unsigned int method_order_current

Was NQ. in DLS001 common block.

• double stage_target_time

was TN, in DLS001 common block.

• double max_step_increase_ratio

was RMAX, in DLS001 common block.

double max_rel_change_without_jacobian

was CCMAX, in DLS001 common block.

Protected Member Functions

void process_entry_point_cycle_start ()

The code block from the main integrate routine for re_entry_point=CycleStartFinish.

void manager_initialize_calculation_part1 ()

Sets the values for the case with calculation_phase = 1.

- void manager_initialize_calculation_part2 ()
- int manager_check_stop_conditions ()

verifies whether the convergence conditions have been met to end the cycle.

void manager_integration_loop_part1 ()

The iteration loop for the integration process.

- void manager_integration_loop_part2 ()
- void manager integration loop part3 ()
- void manager set calculation phase eq 2 reload ()
- void integrator core ()

integrator_core provides the front-end to all of the integrator_*i methods, which together perform one step of the integration of an initial value problem for a system of ordinary differential equations.

void integrator_reset_method_coeffs ()

Sets/resets the method coeffs current array.

void integrator_test_stepsize_change ()

Tests h against old h.

void integrator_reset_yh ()

Resets history arrays and time-step.

void integrator predict ()

This section computes the predicted values by multiplying the history array by the Pascal Triangle matrix.

• void integrator_reset_iteration_loop_part1 ()

This method resets the iteration loop to the values generated by the integrator_predict method, which populated history[*][0].

· void integrator reset iteration loop part2 ()

This code follows part 1 after the break-out to get to the external calls, and completes the reset of the integration iteration loop.

• void integrator_corrector_iteration ()

Keeps looping through the iterations until convergence or failure.

· void integrator corrector failed part1 ()

The corrector iteration failed to converge.

void integrator_corrector_failed_part2 ()

Retracts the history array in the case that the correction iteration failed to converge with either functional iteration or with an up-to-date Jacobian.

void integrator_corrector_converged ()

Starts the processing of a converged iteration.

void integrator_error_test_failed ()

Restores the history array following the failure of the corrector for exceeding local error bounds.

void integrator_compute_new_order_prep ()

The first steps in computing whether the order of the integrator should be changed.

• void integrator_compute_new_order ()

Computes the step-size scaling factors that will result once it is determined what happens to the order at the next step.

- void integrator_compute_new_order_check_step_error ()
- void integrator_set_new_order ()

Sets the new order and the step-ratio for the next step - or the current step if redoing it.

• void integrator fail reset order 1 part1 ()

Repopulates the y-array from history, recomputes the original first derivatives, sets the order back to 1, and reduces the step size by a factor of 10.

void integrator_fail_reset_order_1_part2 ()

Continue reset, with derivatives now at hand.

void integrator_wrapup ()

Wraps up the completion of the integrator.

void integrator_terminate ()

this is the only succesful path back from integrator to manager.

• void calculate epsilon ()

Identify the smallest double precision value, epsilon, such that the computer can distinguish (1+epsilon) from 1.

void calculate_integration_coefficients ()

Modified from original DCFODE subroutine.

void interpolate y ()

Interpolates the zeroth-derivative of y Adapted from subroutine DINTDY, which was a general method for interpolating the K-th derivative of the dependent variable vector, y.

void jacobian_prep_init ()

Modified from DPREPJ.

- bool jacobian_prep_loop ()
- bool jacobian_prep_wrap_up ()
- void linear chord iteration ()

Modified from DSOLSY.

- void load_ew_values ()
- double magnitude_of_weighted_array (const double *v)

returns the RMS value of {V dot W}, where V and W are N-vectors.

double magnitude_of_weighted_array (unsigned int ix, double **v)

returns RMS value of v[*][index]

int gauss_elim_factor ()

Factors a double array (arrays.lin_alg) by Gaussian elimination.

void linear_solver ()

Solves the equation Y' = A Y, with $A = arrays.lin_alg$.

• unsigned int index_of_max_magnitude (unsigned int num_points, double **mx, int starting_ix)

Modified version of IDAMAX.

• void load_derivatives (double *derivs)

Load the externally generated derivative values (incoming as y_dot)i into the array derivs.

Protected Attributes

LsodeDataJacobianPrep data_prepj

data used exclusively for the DPREPJ method.

LsodeDataArrays arrays

data arrays, multiple purposes.

LsodeDataStode data_stode

data used exclusively for the DSTODE method.

• unsigned int num_steps_taken

Was NST, in DLS001 common block.

• unsigned int prior_num_steps

Was NSLAST, in DLS001 common block.

• int step_error

Was KFLAG, in DLS001 common block 0: step was successful -1: requested accuracy could not be achieved.

unsigned int num_small_step_warnings

Was NHNIL, in DLS001 common block.

unsigned int num_jacobian_evals

Was NJE, in DLS001 common block Number of jacobian evaluations so far for the problem.

· double iter_delta

Was DEL, in DSTODE, local variable.

· double prev iter delta

Was DELP, in DSTODE, local variable.

bool first_pass

was ISTATE.

EntryPoint re_entry_point

Indicates where in the integrator to return to following an exit to gether new derivatives.

· bool initialized

was INIT, in DLS001 common block.

· int internal state

Was JSTART, in DLS001 common block.

CalculationTask calculation_task

Was ITASK.

unsigned int max_order_internal

Was MAXORD.

- · LsodeControlDataInterface control data
- LsodeControlDataInterface::IntegrationMethod prev_integration_method

Was MEO, in DLS001 common block Integration method used in previous call (see integration_method).

unsigned int prev_method_order

Was NQU, in DLS001 common block.

• double method_coeff_first

was EL0, in DLS001 common block.

double method_coeffs_current [13]

was EL, in DLS001 common block.

double method_coeffs_complete [13][12]

was ELCO, in DLS001 common block.

double test_coeffs_complete [3][12]

was TESCO, in DLS001 common block.

· double step_size

was H, in DLS001 common block.

• double prev_step_size

was HOLD, in DLS001 common block.

• double prev_good_step_size

was HU, in DLS001 common block.

double max_step_size_inv

was HMXI.

bool jacobian_current

Was JCUR, in DLS001 common block Is the jacobian current.

bool update_jacobian

Was IPUP, in DLS001 common block.

· unsigned int step_at_last_jacobian_update

Was NSLP, in DLS001 common block.

unsigned int convergence_jacobian_flag

Was ICF, in DLS001 common block.

double rel_change_since_jacobian

was RC, in DLS001 common block.

· bool iteration_matrix_singular

Was IERPJ, in DLS001 common block.

bool modified_iteration_matrix_singular

Was IERSL, in DLS001 common block.

- · unsigned int iteration_count
- · double epsilon

was UROUND, in DLS001 common block.

• double sqrt_epsilon

NEW.

Private Member Functions

• LsodeFirstOrderODEIntegrator & operator= (const LsodeFirstOrderODEIntegrator &)

Deleted assignment operator.

• LsodeFirstOrderODEIntegrator (const LsodeFirstOrderODEIntegrator &)

Deleted copy constructor.

8.24.1 Detailed Description

Jeod-compatible version of the Livermore ODE solver, LSODE.

Definition at line 96 of file lsode_first_order_ode_integrator.hh.

8.24.2 Member Enumeration Documentation

8.24.2.1 enum jeod::LsodeFirstOrderODEIntegrator::CalculationTask

Enumerator

Normal Normal operation. Interpolate to target.

OneStep Take only one step and return.

CompleteCycle Stop at first mesh point at or beyond.

NormalWithSingularity Normal computation, with safeguard on.

OneStepWithSingularity Take one step without passing t crit.

Definition at line 130 of file lsode_first_order_ode_integrator.hh.

8.24.2.2 enum jeod::LsodeFirstOrderODEIntegrator::EntryPoint

Enumerator

CycleStartFinish Default value. Assumption is that the current.

InitCalc Reset during initialization. Valid only during.

JacobianPrep Set at the end of the initialization of the.

ResetIterLoop Set when the iteration loop (part of DSTODE) has.

IterationLoop Set during the routine operation of the iteration.

DstodeResetStep Set in dstode_640 when there have been too many.

Definition at line 108 of file lsode_first_order_ode_integrator.hh.

8.24.3 Constructor & Destructor Documentation

8.24.3.1 jeod::LsodeFirstOrderODEIntegrator::LsodeFirstOrderODEIntegrator (const LsodeFirstOrderODEIntegrator &) [private]

Deleted copy constructor.

8.24.4 Member Function Documentation

8.24.4.1 EntryPoint jeod::LsodeFirstOrderODEIntegrator::get_re_entry_point() [inline]

Get re entry point member.

Definition at line 197 of file lsode_first_order_ode_integrator.hh.

References re entry point.

Referenced by jeod::LsodeSecondOrderODEIntegrator::get_re_entry_point().

8.24.4.2 LsodeFirstOrderODEIntegrator& jeod::LsodeFirstOrderODEIntegrator::operator= (const LsodeFirstOrderODEIntegrator &) [private]

Deleted assignment operator.

8.24.6.11 bool jeod::LsodeFirstOrderODEIntegrator::first_pass [protected]

was ISTATE.

true: was IASTATE = 1: first call for the problem, require initialization. false: was IASTATE = 2: subsequent call, no change to input parameters. not covered:IASTATE = 3: subsequent call, input parameters have changed.trick_-units(-)

Definition at line 509 of file lsode_first_order_ode_integrator.hh.

 $Referenced \ by \ process_entry_point_cycle_start(), \ reset_integrator(), \ and \ \sim LsodeFirstOrderODEIntegrator().$

8.24.6.12 bool jeod::LsodeFirstOrderODEIntegrator::initialized [protected]

was INIT, in DLS001 common block.

Flag representing whether the problem has been initialized.trick_units(-)

Definition at line 519 of file lsode_first_order_ode_integrator.hh.

Referenced by manager_integration_loop_part3(), and process_entry_point_cycle_start().

8.24.6.13 int jeod::LsodeFirstOrderODEIntegrator::internal_state [protected]

Was JSTART, in DLS001 common block.

0: First step for problem 1: Continue normal calculation -1: Next step has new values of step-size, order, or methods.

-2: Undocumented.trick_units(-)

Definition at line 527 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator core(), integrator terminate(), and manager initialize calculation part1().

8.24.6.14 double jeod::LsodeFirstOrderODEIntegrator::iter_delta [protected]

Was DEL, in DSTODE, local variable.

RMS value of {y dot error weight data}trick units(-)

Definition at line 489 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_corrector_converged(), integrator_corrector_iteration(), and integrator_reset_iteration_loop_part2().

8.24.6.15 unsigned int jeod::LsodeFirstOrderODEIntegrator::iteration_count [protected]

Definition at line 688 of file Isode first order ode integrator.hh.

Referenced by integrator_corrector_converged(), integrator_corrector_iteration(), and integrator_reset_iteration_loop_part1().

8.24.6.16 bool jeod::LsodeFirstOrderODEIntegrator::iteration_matrix_singular [protected]

Was IERPJ, in DLS001 common block.

false: Iteration matrix was successfully LU-decomposed (iteration-method = 1,2,4,5) or inverted (iteration-method = 3). true: Matrix is singular.trick_units(-)

Definition at line 680 of file Isode_first_order_ode_integrator.hh.

Referenced by integrator_core(), jacobian_prep_init(), and jacobian_prep_wrap_up().

8.24.6.17 bool jeod::LsodeFirstOrderODEIntegrator::jacobian_current [protected]

Was JCUR, in DLS001 common block Is the jacobian current.

trick units(-)

Definition at line 638 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_core(), integrator_corrector_converged(), integrator_corrector_failed_part1(), and jacobian_prep_init().

8.24.6.18 unsigned int jeod::LsodeFirstOrderODEIntegrator::max_history_size

Was LMAX, in DLS001 common block Maximum allowable number of histories.

trick_units(-)

Definition at line 358 of file Isode_first_order_ode_integrator.hh.

Referenced by integrator_compute_new_order_prep(), integrator_core(), and integrator_corrector_converged().

8.24.6.19 unsigned int jeod::LsodeFirstOrderODEIntegrator::max_order_internal [protected]

Was MAXORD.

Populated from IWORK[5] Maximum order allowable.trick units(-)

Definition at line 553 of file Isode first order ode integrator.hh.

Referenced by integrator_core(), and update_control_data().

8.24.6.20 double jeod::LsodeFirstOrderODEIntegrator::max_rel_change_without_jacobian

was CCMAX, in DLS001 common block.

Max relative change to (step_size * method_coeff_first) before Jacobian matrix is updated. see also rel_change_since_jacobian.trick_units(-)

Definition at line 411 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_predict().

8.24.6.21 double jeod::LsodeFirstOrderODEIntegrator::max_step_increase_ratio

was RMAX, in DLS001 common block.

Max ratio by which step size may be increased.trick_units(-)

Definition at line 398 of file Isode first order ode integrator.hh.

Referenced by integrator_core(), integrator_corrector_failed_part2(), integrator_error_test_failed(), and integrator_reset_yh().

8.24.6.22 double jeod::LsodeFirstOrderODEIntegrator::max_step_size_inv [protected]

was HMXI.

Inverse of maximum absolute step size allowable. Default to 0.0 (i.e. there is no upper bound), calculated from max step size if max step size is user-specified.trick units(-)

Definition at line 624 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_reset_yh(), manager_initialize_calculation_part2(), and update_control_data().

8.24.6.23 double jeod::LsodeFirstOrderODEIntegrator::method_coeff_first [protected]

was EL0, in DLS001 common block.

method coefficient I_0 for current method and order.trick_units(-)

Definition at line 581 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_core(), integrator_reset_method_coeffs(), jacobian_prep_init(), and linear_chord_iteration().

8.24.6.24 double jeod::LsodeFirstOrderODEIntegrator::method_coeffs_complete[13][12] [protected]

was ELCO, in DLS001 common block.

The array of all of the method coefficients.trick units(-)

Definition at line 590 of file lsode_first_order_ode_integrator.hh.

Referenced by calculate_integration_coefficients(), integrator_core(), integrator_reset_method_coeffs(), and Lsode-FirstOrderODEIntegrator().

8.24.6.25 double jeod::LsodeFirstOrderODEIntegrator::method_coeffs_current[13] [protected]

was EL, in DLS001 common block.

trick units(-)

Definition at line 585 of file Isode first order ode integrator.hh.

Referenced by integrator_compute_new_order(), integrator_core(), integrator_corrector_converged(), integrator_corrector_iteration(), integrator_reset_method_coeffs(), and LsodeFirstOrderODEIntegrator().

8.24.6.26 unsigned int jeod::LsodeFirstOrderODEIntegrator::method_order_current

Was NQ, in DLS001 common block.

Method order being tried on this or next step.trick_units(-)

Definition at line 376 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_compute_new_order(), integrator_compute_new_order_prep(), integrator_core(), integrator_corrector_failed_part2(), integrator_corrector_iteration(), integrator_corrector_failed(), integrator_fail_reset_order_1_part2(), integrator_predict(), integrator_reset_method_coeffs(), integrator_set_new_order(), interpolate_y(), manager_initialize_calculation_part2(), and reset_integrator().

8.24.6.27 bool jeod::LsodeFirstOrderODEIntegrator::modified_iteration_matrix_singular [protected]

Was IERSL, in DLS001 common block.

Like iteration_matrix_singular, only applied to the iteration matrix that has been modified to account for the new step for iteration-method 3.trick units(-)

Definition at line 687 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_core(), integrator_corrector_iteration(), and linear_chord_iteration().

8.24.6.28 unsigned int jeod::LsodeFirstOrderODEIntegrator::num_equations

Was NYH, in DLS001 common block.

Number of ODEs to be solved in the current problem. In this implementation, num_odes = num_equations.trick_-units(-)

Definition at line 346 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_core(), integrator_corrector_failed_part2(), integrator_error_test_failed(), integrator_predict(), integrator_reset_method_coeffs(), and process_entry_point_cycle_start().

8.24.6.29 unsigned int jeod::LsodeFirstOrderODEIntegrator::num_jacobian_evals [protected]

Was NJE, in DLS001 common block Number of jacobian evaluations so far for the problem.

trick_units(-)

Definition at line 484 of file lsode_first_order_ode_integrator.hh.

Referenced by jacobian_prep_init().

8.24.6.30 unsigned int jeod::LsodeFirstOrderODEIntegrator::num_nordsiek_cols

Was L, in DLS001 common block Number of columns in Nordsiek array.

This appears to be a variable that s equal to the current order of the integrator + 1.trick_units(-)

Definition at line 353 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_compute_new_order(), integrator_compute_new_order_prep(), integrator_core(), integrator_corrector_converged(), integrator_fail_reset_order_1_part2(), integrator_reset_method_coeffs(), integrator_reset_yh(), integrator_set_new_order(), and interpolate_y().

8.24.6.31 unsigned int jeod::LsodeFirstOrderODEIntegrator::num_predictor_elements

Was NQNYH, in DLS001 common block.

Number of elements of history array that are changed by predictor.trick units(-)

Definition at line 363 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator core(), and integrator reset method coeffs().

8.24.6.32 unsigned int jeod::LsodeFirstOrderODEIntegrator::num_small_step_warnings [protected]

Was NHNIL, in DLS001 common block.

Number of small-step encounters fo the problem so far.trick units(-)

Definition at line 479 of file Isode first order ode integrator.hh.

Referenced by manager_integration_loop_part2().

8.24.6.33 unsigned int jeod::LsodeFirstOrderODEIntegrator::num_steps_taken [protected]

Was NST, in DLS001 common block.

Number of steps taken for this problem.trick units(-)

Definition at line 462 of file Isode first order ode integrator.hh.

Referenced by integrator_corrector_converged(), integrator_predict(), jacobian_prep_wrap_up(), manager_check_stop_conditions(), and manager_integration_loop_part1().

8.24.6.34 unsigned int jeod::LsodeFirstOrderODEIntegrator::order_select_para

Was IALTH, in DLS001 common block.

0: Select optimal step size and method order 1: If prev_success_order < maximum_order, save vector so that an increase can be considered. >1: Perform neither.trick_units(-)

Definition at line 334 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_compute_new_order(), integrator_compute_new_order_check_step_error(), integrator_core(), integrator_corector_converged(), integrator_fail_reset_order_1_part2(), and integrator_reset_yh().

8.24.6.35 double jeod::LsodeFirstOrderODEIntegrator::prev_good_step_size [protected]

was HU, in DLS001 common block.

The size of the last successful step.trick_units(-)

Definition at line 617 of file Isode first order ode integrator.hh.

Referenced by integrator_corrector_converged(), interpolate_y(), and reset_integrator().

8.24.6.36 LsodeControlDataInterface::IntegrationMethod jeod::LsodeFirstOrderODEIntegrator::prev_integration_method [protected]

Was MEO, in DLS001 common block Integration method used in previous call (see integration_method).

trick units(-)

Definition at line 565 of file Isode first order ode integrator.hh.

Referenced by integrator_core().

8.24.6.37 double jeod::LsodeFirstOrderODEIntegrator::prev_iter_delta [protected]

Was DELP, in DSTODE, local variable.

Previous value of iter_delta, used for comparison to identify rate at which iteration is converging / identifying divergence of iteration.trick_units(-)

Definition at line 496 of file Isode first order ode integrator.hh.

Referenced by integrator corrector iteration(), and integrator reset iteration loop part2().

8.24.6.38 unsigned int jeod::LsodeFirstOrderODEIntegrator::prev_method_order [protected]

Was NQU, in DLS001 common block.

Method order used in last successful step.trick_units(-)

Definition at line 570 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_corrector_converged(), and integrator_wrapup().

8.24.6.39 double jeod::LsodeFirstOrderODEIntegrator::prev_step_size [protected]

was HOLD, in DLS001 common block.

trick_units(-)

Definition at line 612 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_core(), integrator_terminate(), and integrator_test_stepsize_change().

8.24.6.40 unsigned int jeod::LsodeFirstOrderODEIntegrator::prior num steps [protected]

Was NSLAST, in DLS001 common block.

Number of steps taken for the problem prior to this call to Lsode.trick_units(-)

Definition at line 467 of file lsode_first_order_ode_integrator.hh.

Referenced by manager_check_stop_conditions(), and manager_integration_loop_part1().

8.24.6.41 EntryPoint jeod::LsodeFirstOrderODEIntegrator::re_entry_point [protected]

Indicates where in the integrator to return to following an exit to gether new derivatives.

trick_units(-)

Definition at line 514 of file lsode_first_order_ode_integrator.hh.

Referenced by get_re_entry_point(), integrate(), integrator_corrector_iteration(), integrator_fail_reset_order_1_part1(), integrator_reset_iteration_loop_part1(), jacobian_prep_init(), manager_initialize_calculation_part1(), manager_integration_loop_part2(), and reset_integrator().

8.24.6.42 double jeod::LsodeFirstOrderODEIntegrator::rel_change_since_jacobian [protected]

was RC, in DLS001 common block.

Relative change to (step_size * method_coeff_first) since last update to Jacobian matrix.trick_units(-)

Definition at line 661 of file Isode first order ode integrator.hh.

Referenced by integrator_core(), integrator_predict(), integrator_reset_method_coeffs(), integrator_reset_yh(), and jacobian_prep_wrap_up().

8.24.6.43 double jeod::LsodeFirstOrderODEIntegrator::sqrt_epsilon [protected]

NEW.

square root of epsilon.trick_units(-)

Definition at line 703 of file lsode_first_order_ode_integrator.hh.

Referenced by calculate epsilon(), and manager initialize calculation part1().

8.24.6.44 double jeod::LsodeFirstOrderODEIntegrator::stage_target_time

was TN, in DLS001 common block.

Value of the independent variable, typically time, to which the integrator has successfully advanced, or to which it will advance in the next step/stage.trick units(-)

Definition at line 393 of file lsode_first_order_ode_integrator.hh.

Referenced by integrate(), integrator_core(), integrator_corrector_failed_part2(), integrator_error_test_failed(), integrator_predict(), interpolate_y(), manager_check_stop_conditions(), manager_integration_loop_part1(), manager_integration_loop_part2(), manager_integration_loop_part3(), process_entry_point_cycle_start(), and reset_integrator().

8.24.6.45 unsigned int jeod::LsodeFirstOrderODEIntegrator::step_at_last_jacobian_update [protected]

Was NSLP, in DLS001 common block.

Step number at last Jacobian update.trick_units(-)

Definition at line 648 of file lsode_first_order_ode_integrator.hh.

Referenced by integrator_core(), integrator_predict(), and jacobian_prep_wrap_up().

8.24.6.46 int jeod::LsodeFirstOrderODEIntegrator::step_error [protected]

Was KFLAG, in DLS001 common block 0: step was successful -1: requested accuracy could not be achieved.

<=-2: repeated convergence failures.trick_units(-)

Definition at line 474 of file lsode_first_order_ode_integrator.hh.

Referenced by integrate(), integrator_compute_new_order_check_step_error(), integrator_core(), integrator_corrector_converged(), integrator_corrector_failed_part2(), integrator_error_test_failed(), integrator_fail_reset_order_1_part1(), and manager_integration_loop_part3().

8.24.6.47 double jeod::LsodeFirstOrderODEIntegrator::step_size [protected]

was H, in DLS001 common block.

Step size used on this step, or to be attempted on next.trick_units(-)

Definition at line 608 of file Isode_first_order_ode_integrator.hh.

Referenced by integrator_core(), integrator_corrector_converged(), integrator_corrector_failed_part2(), integrator_corrector_iteration(), integrator_error_test_failed(), integrator_fail_reset_order_1_part1(), integrator_fail_reset_order_1_part2(), integrator_predict(), integrator_reset_method_coeffs(), integrator_reset_yh(), integrator_set_new_order(), integrator_terminate(), integrator_test_stepsize_change(), interpolate_y(), jacobian_prep_init(), jacobian_prep_wrap_up(), linear_chord_iteration(), manager_check_stop_conditions(), manager_initialize_calculation_part2(), manager_integration_loop_part2(), and manager_integration_loop_part3().

8.24.6.48 double jeod::LsodeFirstOrderODEIntegrator::test_coeffs_complete[3][12] [protected]

was TESCO, in DLS001 common block.

The array of all of the test coefficientstrick units(-)

Definition at line 595 of file Isode first order ode integrator.hh.

Referenced by calculate_integration_coefficients(), integrator_compute_new_order(), integrator_compute_new_order(), integrator_corector_integrator_corrector_converged(), integrator_corrector_iteration(), integrator_wrapup(), and LsodeFirstOrderODEIntegrator().

8.24.6.49 bool jeod::LsodeFirstOrderODEIntegrator::update_jacobian [protected]

Was IPUP, in DLS001 common block.

Flag to indicate whether it is necessary to update the Jacobian.trick_units(-)

Definition at line 643 of file Isode first order ode integrator.hh.

Referenced by integrate(), integrator_core(), integrator_corrector_failed_part1(), integrator_corrector_failed_part2(), integrator_fail_reset_order_1_part2(), integrator_predict(), and jacobian_prep_wrap_up().

8.24.6.50 double* jeod::LsodeFirstOrderODEIntegrator::y

Was Y.

State vector (zeroth derivative).trick units(-)

Definition at line 296 of file lsode_first_order_ode_integrator.hh.

Referenced by integrate(), integrator_corrector_iteration(), integrator_fail_reset_order_1_part1(), integrator_reset_iteration_loop_part1(), interpolate_y(), jacobian_prep_init(), jacobian_prep_loop(), linear_chord_iteration(), linear_solver(), and manager initialize calculation part2().

8.24.6.51 const double* jeod::LsodeFirstOrderODEIntegrator::y_dot

Was .

State vector (first derivative).trick_units(-)

Definition at line 301 of file lsode_first_order_ode_integrator.hh.

Referenced by integrate(), load_derivatives(), and manager_initialize_calculation_part2().

8.27 jeod::LsodeIntegratorConstructor Class Reference

Create state and time integrators that propagate using standard Lsode.

```
#include <lsode_integrator_constructor.hh>
```

Inheritance diagram for jeod::LsodeIntegratorConstructor:

Public Member Functions

• LsodeIntegratorConstructor (void)

Default constructor.

- LsodeIntegratorConstructor (const LsodeIntegratorConstructor &src)
- const char * get class name (void) const override

Return the class name.

- bool implements (er7_utils::Integration::ODEProblemType problem_type) const override
 - Lsode currently does not implement a second order generalized step integrator.
- bool provides (er7_utils::Integration::ODEProblemType problem_type) const override

Lsode currently does not provide a second order generalized step integrator.

• er7_utils::IntegratorConstructor * create_copy (void) const override

Create a duplicate of the constructor.

• er7_utils::IntegrationControls * create_integration_controls (void) const override

Create an integration controls that guides the Lsode integration process.

 er7_utils::FirstOrderODEIntegrator * create_first_order_ode_integrator (unsigned int size, er7_utils::-IntegrationControls &controls) const override

Create an Lsode state integrator for a first order ODE.

• er7_utils::SecondOrderODEIntegrator * create_second_order_ode_integrator (unsigned int size, er7_utils::IntegrationControls &controls) const override

Create an Lsode state integrator for a simple second order ODE.

er7_utils::SecondOrderODEIntegrator * create_generalized_deriv_second_order_ode_integrator (unsigned int position_size, unsigned int velocity_size, const er7_utils::GeneralizedPositionDerivativeFunctions &deriv_funs, er7_utils::IntegrationControls &controls) const override

Create an Lsode state integrator for a generalized second order ODE where generalized position is advanced with the use of the position derivative function.

unsigned int get_transition_table_size (void) const override

Lsode dioes not use a linear transition table.

Static Public Member Functions

· static

er7_utils::IntegratorConstructor * create_constructor (void)

Named constructor; create an LsodeIntegratorConstructor instance.

8.38.1 Detailed Description

template<typename IntegratorType>class jeod::RestartableStateIntegrator< IntegratorType>

A RestartableStateIntegrator establishes the basic capabilities needed to make a state integrator a managed resource.

This includes

- Creating the integrator object,
- · Restoring the integrator's derivative function on restart, and
- Destroying the integrator when the RestartableStateIntegrator instance goes out of scope.

Template Parameters

IntegratorType	The type of integrator to be managed, either er7_utils::FirstOrderODEIntegrator
	or er7_utils::SecondOrderODEIntegrator.

Usage:

This base class template is not directly usable. One must instead use one of the three class templates that derive from this class template:

- RestartableFirstOrderODEIntegrator to manage an er7 utils::FirstOrderODEIntegrator pointer;
- RestartableGeneralizedDerivSecondOrderODEIntegrator to manage an er7_utils::SecondOrderODEIntegrator pointer for a generalized second order ODE, one in which the time derivative of generalized position is a function of generalized position and generalized velocity; and
- RestartableGeneralizedStepSecondOrderODEIntegrator to manage an er7_utils::SecondOrderODE-Integrator pointer for a generalized second order ODE, one in which the time derivative of generalized position is a function of generalized position and generalized velocity; and
- RestartableSimpleSecondOrderODEIntegrator to manage an er7_utils::SecondOrderODEIntegrator pointer
 for a simple second order ODE, one in which the time derivative of generalized position is the generalized
 velocity.

Each state integrator to be used in some class needs a pair of data members declared in the definition of that class. The first of these pairs is a pointer to the appropriate state integrator type (either er7_utils::FirstOrderODEIntegrator). The second of the pairs of data members is an instance of the appropriate derived class of RestartableStateIntegrator that will manage the pointer. An example:

```
class MyClass {
    ...
    er7_utils::SecondOrderODEIntegrator * integrator;
    RestartableSimpleSecondOrderODEIntegrator\<3\> integ_manager;
    ...
};
```

The pointer itself must be exposed to Trick for checkpoint and restart. The RestartableStateIntegrator-derived object should be hidden from Trick.

The connection between the pointer and the manager for that pointer is made in the initializer lists of the constructors for the class. Use the RestartableStateIntegrator non-default constructor to tie the RestartableStateIntegrator object with the pointer it is to manage:

```
MyClass::MyClass ()
:
    ...
    integrator(NULL),
    integ_manager(integrator),
    ...
{
    // Body of MyClass constructor
}
```

Note that there the RestartableStateIntegrator default constructors exist only for the sake of the simulation engine. The default constructors do not create viable instances. One must use the non-default constructor to initialize RestartableStateIntegrator instances.

The integrator itself is not created at construction time. Creating the integrator is the job of the create_integrator method. This method should be called at initialization time after having created the integration constructor and the integration controls objects.

The counterpart to the create_integrator method is destroy_integrator. This method must be called prior to calling create_integrator if the integrator has already been created via a previous call to create_integrator. (For example, switching to a different integration technique). The destroy_integrator can be called at shutdown or destruction time, but this call is not essential. The RestartableStateIntegrator object will call this method internally when it goes out of scope.

Class Design

This class template uses the non-virtual interface (NVI) design pattern, aka the template method design pattern (no relation to C++ class templates). The public create_integrator and simple_restore member functions use the private virtual create_integrator_internal and simple_restore_internal functions to create and restore the integrators.

8.39.1 Detailed Description

A RestartableT3SecondOrderODEIntegrator integrates a second order ODE in three space, $d^2x/dt^2 = a(x,t)$, where x is a three-vector.

Definition at line 212 of file restartable_state_integrator.hh.

8.39.2 Constructor & Destructor Documentation

8.39.2.1 jeod::RestartableT3SecondOrderODEIntegrator::RestartableT3SecondOrderODEIntegrator() [inline]

Default constructor.

Definition at line 220 of file restartable_state_integrator.hh.

8.39.2.2 jeod::RestartableT3SecondOrderODEIntegrator::~RestartableT3SecondOrderODEIntegrator() [inline], [override]

Destructor.

Definition at line 232 of file restartable_state_integrator.hh.

8.39.2.3 jeod::RestartableT3SecondOrderODEIntegrator::RestartableT3SecondOrderODEIntegrator (const RestartableT3SecondOrderODEIntegrator &) [private]

Not implemented.

8.39.3 Member Function Documentation

8.39.3.1 void jeod::RestartableT3SecondOrderODEIntegrator::create_integrator (const er7_utils::IntegratorConstructor & generator, er7_utils::IntegrationControls & controls) [inline]

Create the integrator to be managed.

Parameters

in	generator	Integrator constructor used to create the integrator.
in,out	controls	Integration controls to be passed to the generator.

Definition at line 239 of file restartable state integrator.hh.

References jeod::RestartableStateIntegrator< IntegratorType >::create_integrator(), and integrator_manager.

8.39.3.2 void jeod::RestartableT3SecondOrderODEIntegrator::destroy_integrator() [inline]

Destroy the integrator.

Definition at line 249 of file restartable_state_integrator.hh.

References jeod::RestartableStateIntegrator< IntegratorType >::destroy_integrator(), and integrator_manager.

8.39.3.3 er7_utils::IntegratorResult jeod::RestartableT3SecondOrderODEIntegrator::integrate (double *dyn_dt*, unsigned int *target_stage*, double const * *accel*, double * *velocity*, double * *position*) [inline]

Propagate state to the specified stage of the integration process for an overall integration time interval of dyn_dt.

Note that this is a pass-through to the encapsulated integrator object. See er7_utils::SecondOrderODEIntegrator::integrate for details.

Parameters

in	dyn_dt	Dynamic time step, in dynamic time seconds.

in	target_stage	The stage of the integration process that the integrator should try to attain.
in	accel	Time derivative of the generalized velocity.
in,out	velocity	Generalized velocity vector.
in,out	position	Generalized position vector.

Returns

The status (time advance, pass/fail status) of the integration.

Definition at line 270 of file restartable state integrator.hh.

References integrator.

8.39.3.4 RestartableT3SecondOrderODEIntegrator&jeod::RestartableT3SecondOrderODEIntegrator::operator=(const RestartableT3SecondOrderODEIntegrator &) [private]

Not implemented.

8.39.3.5 void jeod::RestartableT3SecondOrderODEIntegrator::reset_integrator() [inline]

Tell the integrator to reset itself.

This should be called when the time step or time direction changes or upon a discrete change in state such docking/undocking. Such events invalidate saved state (if any). The integrator needs to restart from scratch when such events occur.

Definition at line 288 of file restartable_state_integrator.hh.

References integrator.

8.39.3.6 void jeod::RestartableT3SecondOrderODEIntegrator::simple restore() [inline], [override]

Restore the integrator on restart.

Definition at line 296 of file restartable state integrator.hh.

References integrator, integrator_manager, jeod::RestartableStateIntegrator< IntegratorType >::set_integrator_reference(), and jeod::RestartableStateIntegrator< IntegratorType >::simple_restore().

8.41 er7_utils::TwoDArray< T > Class Template Reference

RAII template class that implements a rectangular two dimensional array.

```
#include <two_d_array.hh>
```

Public Member Functions

• TwoDArray ()

Default constructor.

TwoDArray (const TwoDArray< T > &src)

Copy constructor.

∼TwoDArray ()

Destructor.

TwoDArray< T > & operator= (TwoDArray< T > src)

Copy and swap assignment constructor.

const T * operator[] (int N) const

Const overloaded index operator.

T * operator[] (int N)

Non-const overloaded index operator.

const T & operator() (int N, int M) const

Const overloaded function operator.

• T & operator() (int N, int M)

Non-const overloaded function operator.

operator T const *const * () const

Const conversion operator to T const* const*.

operator T *const * ()

Non-const conversion operator to T*const*.

const T * at (int N) const

Range-checked equivalent of const T* operator[](int N) const.

• T * at (int N)

Range-checked equivalent of T* operator[](int N).

. const T & at (int N, int M) const

Range-checked equivalent of const T& operator()(int N, int M) const.

• T & at (int N, int M)

Range-checked equivalent of T& operator()(int N, int M).

void allocate (std::size_t N, std::size_t M)

Allocate the array.

• void rotate_down (int limit)

Rotate elements 0 to limit downward, with array element 0 moved to array element limit.

void rotate_up (int limit)

Rotate elements 0 to limit upward, with array element limit moved to array element 0.

• void downsample (int limit)

Downsample the array by swapping pointers.

void swap (TwoDArray< T > &other)

Swap the contents of *this with the other.

Protected Attributes

• int n

The number of rows in the array.

• int m

The number of columns in the array.

T * data_array

The array data, as an NxM array of T.

T ** row_array

The rows in the array.

Private Member Functions

void allocate_internal ()

Allocate memory for the array.

• void deallocate_internal ()

Deallocate memory for the array.

Friends

void swap (TwoDArray< T > &first, TwoDArray< T > &second)

Swap the contents of the two provided arrays.

8.41.1 Detailed Description

template < typename T > class er7_utils::TwoDArray < T >

RAII template class that implements a rectangular two dimensional array.

The implementation provides two special-purpose features that are needed by some of the ER7 utilities and JEOD integrators. The rows of the array can be rotated and downsampled.

Template Parameters

T	Type of each element of the array.
---	------------------------------------

Definition at line 83 of file two_d_array.hh.

8.41.2 Constructor & Destructor Documentation

8.41.2.1 template < typename T > er7 utils::TwoDArray < T >::TwoDArray () [inline]

Default constructor.

Definition at line 90 of file two_d_array.hh.

8.41.2.2 template er7_utils::TwoDArray< T>::TwoDArray (const TwoDArray< T> & src)
$$[\verb|inline|]$$

Copy constructor.

Parameters

src	Item to be copied.

Definition at line 102 of file two_d_array.hh.

8.41.2.3 template<typename T> er7_utils::TwoDArray<T>::~TwoDArray() [inline]

Destructor.

Definition at line 125 of file two_d_array.hh.

8.41.3 Member Function Documentation

8.41.3.1 template<typename T> void er7_utils::TwoDArray< T>::allocate (std::size_t M, std::size_t M) [inline]

Allocate the array.

Parameters

N	Number of rows in the array.
М	Number of columns in the array.

Exceptions

std::domain_error	N and/or M won't fit in a signed int.

Definition at line 273 of file two_d_array.hh.

Referenced by jeod::GaussJacksonIntegratorBase< State, Primer >::GaussJacksonIntegratorBase(), and er7_utils::TwoDArray< double >::TwoDArray().

8.41.3.2 template < typename T > void er7 utils::TwoDArray < T >::allocate_internal() [inline], [private]

Allocate memory for the array.

Definition at line 405 of file two_d_array.hh.

Referenced by er7_utils::TwoDArray< double >::allocate().

8.41.3.3 template<typename T> const T* er7_utils::TwoDArray< T>::at(int N) const [inline]

Range-checked equivalent of const T*operator[](int N) const.

Parameters

N	Row index.
---	------------

Returns

Const pointer to the Nth row in the array.

Exceptions

std::out_of_range	If N is an invalid index.

Definition at line 211 of file two_d_array.hh.

8.41.3.4 template<typename $T > T* er7_utils::TwoDArray < T >::at(int N)$ [inline]

Range-checked equivalent of T* operator[](int N).

Parameters

N	Row index.

Returns

Modifiable pointer to the Nth row in the array.

Exceptions

std::out_of_range	If N is an invalid index.

Definition at line 225 of file two_d_array.hh.

8.41.3.5 template<typename T> const T& er7_utils::TwoDArray<T>::at(int N, int M) const [inline]

Range-checked equivalent of const T& operator()(int N, int M) const.

Parameters

N	Row index.
М	Column index.

Returns

Const reference to the N,M element of the array.

Exceptions

std::out_of_range	If N or M is an invalid index.

Definition at line 241 of file two_d_array.hh.

8.41.3.6 template<typename T> T& er7_utils::TwoDArray< T>::at(int N, int M) [inline]

Range-checked equivalent of T& operator()(int N, int M).

Parameters

N	Row index.
М	Column index.

Returns

Reference to the N,M element of the array.

Exceptions

std::out_of_range	If N or M is an invalid index.

Definition at line 257 of file two d array.hh.

Deallocate memory for the array.

Definition at line 414 of file two d array.hh.

Referenced by er7_utils::TwoDArray< double >::~TwoDArray< double >::~TwoDArray().

```
8.41.3.8 template<typename T> void er7_utils::TwoDArray<T>::downsample(int limit) [inline]
```

Downsample the array by swapping pointers.

Parameters

limit	Number of usable rows after downsample.
-------	---

Exceptions

std::out_of_range	If <i>limit</i> represents an invalid index.
-------------------	--

Definition at line 338 of file two d array.hh.

 $Referenced\ by\ jeod:: Gauss Jackson Integrator Base < State,\ Primer > :: downsample_hist().$

```
8.41.3.9 template<typename T> er7_utils::TwoDArray<T>::operator T *const *( ) [inline]
```

Non-const conversion operator to T*const*.

Returns

Modifiable pointer to the array.

Definition at line 199 of file two_d_array.hh.

References er7_utils::TwoDArray< T >::row_array.

```
8.41.3.10 template<typename T> er7_utils::TwoDArray< T>::operator T const *const *( ) const [inline]
```

Const conversion operator to T const* const*.

Returns

Non-modifiable pointer to the array.

Definition at line 190 of file two_d_array.hh.

References er7_utils::TwoDArray< T >::row_array.

8.41.3.11 template < typename T > const T& er7_utils::TwoDArray < T >::operator() (int N, int M) const [inline]

Const overloaded function operator.

Parameters

N	Row index.
М	Column index.

Returns

Const reference to the N,M element of the array.

Definition at line 169 of file two_d_array.hh.

8.41.3.12 template < typename T > T& er7_utils::TwoDArray < T >::operator() (int N, int M) [inline]

Non-const overloaded function operator.

Parameters

N	Row index.
М	Column index.

Returns

Reference to the N,M element of the array.

Definition at line 180 of file two_d_array.hh.

8.41.3.13 template < typename T > TwoDArray < T > & er7_utils::TwoDArray < T > ::operator=(TwoDArray < T > src) [inline]

Copy and swap assignment constructor.

Parameters

src	Item to be copied.

Definition at line 135 of file two_d_array.hh.

8.41.3.14 template<typename T> const T* er7_utils::TwoDArray< T>::operator[](int N) const [inline]

Const overloaded index operator.

Parameters

N	Row index.

Returns

Const pointer to the Nth row in the array.

Definition at line 147 of file two_d_array.hh.

8.41.3.15 template < typename T > T* er7_utils::TwoDArray < T >::operator[](int N) [inline]

Non-const overloaded index operator.

Parameters

N	Row index.
---	------------

Returns

Modifiable pointer to the Nth row in the array.

Definition at line 157 of file two_d_array.hh.

8.41.3.16 template < typename T > void er7_utils::TwoDArray < T >::rotate_down(int limit) [inline]

Rotate elements 0 to limit downward, with array element 0 moved to array element limit.

Parameters

,, ,,	
limit	Index of last element participating in the rotation.
111111	index of last element participating in the rotation.

Exceptions

std::out_of_range If limit is an invalid index.		If <i>limit</i> is an invalid index.
---	--	--------------------------------------

Definition at line 300 of file two_d_array.hh.

Referenced by jeod::GaussJacksonIntegratorBase < State, Primer >::rotate acc hist().

8.41.3.17 template < typename T > void er7_utils::TwoDArray < T >::rotate_up(int limit) [inline]

Rotate elements 0 to limit upward, with array element limit moved to array element 0.

Parameters

limit	Index of last element participating in the rotation.

Exceptions

std::out_of_range	If <i>limit</i> is an invalid index.

Definition at line 319 of file two d array.hh.

8.41.3.18 template < typename T> void er7_utils::TwoDArray < T>::swap (TwoDArray < T> & other) [inline]

Swap the contents of *this with the other.

Parameters

other	Other array.

Definition at line 354 of file two d array.hh.

Referenced by $er7_utils::TwoDArray< double >::operator=(), and jeod::GaussJacksonIntegratorBase< State, Primer >::swap().$

8.41.4 Friends And Related Function Documentation

8.41.4.1 template<typename T> void swap (TwoDArray< T > & first, TwoDArray< T > & second) [friend]

Swap the contents of the two provided arrays.

Parameters

first	First array.
second	Second array.

Definition at line 367 of file two d array.hh.

8.41.5 Field Documentation

8.41.5.1 template<**typename** T> T* **er7_utils::TwoDArray**< T>::data_array [protected]

The array data, as an NxM array of T.

Namespaces

jeod

Namespace jeod.

9.8.1 Detailed Description

Defines member functions for the class GaussJacksonGeneralizedDerivSecondOrderODEIntegrator.

Definition in file gauss_jackson_generalized_second_order_ode_integrator.cc.

9.9 gauss_jackson_generalized_second_order_ode_integrator.hh File Reference

Defines the class GaussJacksonGeneralizedDerivSecondOrderODEIntegrator, which integrates a generalized derivative second order ODE using Gauss-Jackson.

```
#include "gauss_jackson_first_order_ode_integrator.hh"
#include "gauss_jackson_simple_second_order_ode_integrator.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/integration/core/include/second_order_ode_integrator.-
hh"
```

Data Structures

• class jeod::GaussJacksonGeneralizedDerivSecondOrderODEIntegrator

Integrates a generalized derivative second order ODE using Gauss-Jackson.

Namespaces

• jeod

Namespace jeod.

9.9.1 Detailed Description

Defines the class GaussJacksonGeneralizedDerivSecondOrderODEIntegrator, which integrates a generalized derivative second order ODE using Gauss-Jackson.

Definition in file gauss_jackson_generalized_second_order_ode_integrator.hh.

9.10 gauss jackson integration controls.cc File Reference

Defines member functions for the class GaussJacksonIntegrationControls.

```
#include "utils/math/include/numerical.hh"
#include "../include/gauss_jackson_integration_controls.hh"
#include "er7_utils/integration/core/include/base_integration_group.hh"
#include "er7_utils/integration/core/include/integrator_constructor.hh"
#include "er7_utils/integration/core/include/integrator_result.hh"
#include "er7_utils/integration/core/include/time_interface.hh"
#include "er7_utils/interface/include/alloc.hh"
#include <cassert>
```

Namespaces

jeod

Namespace jeod.

9.10.1 Detailed Description

Defines member functions for the class GaussJacksonIntegrationControls.

Definition in file gauss_jackson_integration_controls.cc.

9.11 gauss_jackson_integration_controls.hh File Reference

Defines the class Gauss-Jackson Integration Controls, which controls Gauss-Jackson integration process.

```
#include "gauss_jackson_coeffs.hh"
#include "gauss_jackson_config.hh"
#include "gauss_jackson_state_machine.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/integration/core/include/integration_controls.hh"
```

Data Structures

class jeod::GaussJacksonIntegrationControls

IntegrationControls specialized for Gauss-Jackson integration.

Namespaces

er7_utils

Namespace er7_utils contains the state integration models used by JEOD.

jeod

Namespace jeod.

9.11.1 Detailed Description

Defines the class Gauss-Jackson Integration Controls, which controls Gauss-Jackson integration process.

Definition in file gauss_jackson_integration_controls.hh.

9.12 gauss_jackson_integrator_base.hh File Reference

Defines the template class GaussJacksonIntegratorBase, which provides the basis for Gauss-Jackson integration.

```
#include "two_d_array.hh"
#include "gauss_jackson_coeffs.hh"
#include "gauss_jackson_config.hh"
#include "gauss_jackson_integration_controls.hh"
#include "gauss_jackson_state_machine.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/integration/core/include/integrator_result.hh"
#include "er7_utils/integration/core/include/integ_utils.hh"
#include "er7_utils/interface/include/alloc.hh"
#include <algorithm>
#include <cassert>
```

Data Structures

class jeod::GaussJacksonIntegratorBase< State, Primer >

Base template class for integrating state via the Gauss-Jackson technique.

Namespaces

jeod

Namespace jeod.

9.12.1 Detailed Description

Defines the template class GaussJacksonIntegratorBase, which provides the basis for Gauss-Jackson integration.

Definition in file gauss_jackson_integrator_base.hh.

9.13 gauss_jackson_integrator_base_first.hh File Reference

Defines the template specializations of GaussJacksonIntegratorBase for a first order ODE.

```
#include "gauss_jackson_integrator_base.hh"
#include "gauss_jackson_one_state.hh"
#include "er7_utils/integration/core/include/first_order_ode_integrator.hh"
#include "er7_utils/integration/core/include/integrator_constructor.hh"

Namespace jeod.

Functions

· static

GaussJacksonIntegrationControls * jeod::cast_to_gj_controls (er7_utils::IntegrationControls &controls)

Cast the provided integration controls to a GaussJacksonIntegrationControls.

9.15.1 Detailed Description

Defines member functions for the class GaussJacksonIntegratorConstructor.

Definition in file gauss_jackson_integrator_constructor.cc.

9.16 gauss_jackson_integrator_constructor.hh File Reference

Defines the class GaussJacksonIntegratorConstructor, which constructs integrators that use Gauss-Jackson integration.

```
#include "gauss_jackson_config.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/integration/core/include/integrator_constructor.hh"
```

Data Structures

· class jeod::GaussJacksonIntegratorConstructor

Create state and time integrators that propagate using Gauss-Jackson.

Namespaces

jeod

Namespace jeod.

9.16.1 Detailed Description

Defines the class GaussJacksonIntegratorConstructor, which constructs integrators that use Gauss-Jackson integration.

Definition in file gauss_jackson_integrator_constructor.hh.

9.17 gauss_jackson_one_state.hh File Reference

Defines the class GaussJacksonOneState, which contains a double* pointer.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include <cstddef>
```

Data Structures

class jeod::GaussJacksonOneState
 Essentially just a double*.

Namespaces

jeod

Namespace jeod.

9.17.1 Detailed Description

Defines the class GaussJacksonOneState, which contains a double* pointer.

Definition in file gauss_jackson_one_state.hh.

9.18 gauss_jackson_rational_coeffs.cc File Reference

Defines member functions for the class GaussJacksonRationalCoefficients.

```
#include "../include/gauss_jackson_rational_coeffs.hh"
#include "er7_utils/math/include/n_choose_m.hh"
#include "er7_utils/math/include/ratio128.hh"
#include <cassert>
```

Namespaces

• jeod

Namespace jeod.

9.18.1 Detailed Description

Defines member functions for the class GaussJacksonRationalCoefficients.

Definition in file gauss_jackson_rational_coeffs.cc.

9.19 gauss_jackson_rational_coeffs.hh File Reference

Defines the class GaussJacksonRationalCoefficients, which contains a set of Adams or Stormer-Cowell coefficients.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/math/include/ratio128.hh"
#include <vector>
```

Data Structures

· class jeod::GaussJacksonRationalCoefficients

Contains a set of Adams or Stormer-Cowell coefficients.

Namespaces

• er7 utils

Namespace er7_utils contains the state integration models used by JEOD.

jeod

Namespace jeod.

9.19.1 Detailed Description

Defines the class GaussJacksonRationalCoefficients, which contains a set of Adams or Stormer-Cowell coefficients. Definition in file gauss_jackson_rational_coeffs.hh.

9.20 gauss_jackson_simple_second_order_ode_integrator.hh File Reference

Defines the class GaussJacksonSimpleSecondOrderODEIntegrator, which integrates a simple second order ODE using Gauss-Jackson.

```
#include "gauss_jackson_integrator_base_second.hh"
#include "gauss_jackson_two_state.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/integration/core/include/second_order_ode_integrator.-
hh"
```

Data Structures

class jeod::GaussJacksonSimpleSecondOrderODEIntegrator

Integrates a simple second order ODE using the Gauss-Jackson technique.

Namespaces

• jeod

Namespace jeod.

9.20.1 Detailed Description

Defines the class GaussJacksonSimpleSecondOrderODEIntegrator, which integrates a simple second order ODE using Gauss-Jackson.

Definition in file gauss_jackson_simple_second_order_ode_integrator.hh.

9.21 gauss_jackson_state_machine.cc File Reference

Defines member functions for the class GaussJacksonStateMachine.

```
#include "../include/gauss_jackson_state_machine.hh"
#include "../include/gauss_jackson_config.hh"
#include <algorithm>
#include <cassert>
#include <string>
```

Namespaces

jeod

Namespace jeod.

9.21.1 Detailed Description

Defines member functions for the class GaussJacksonStateMachine.

Definition in file gauss_jackson_state_machine.cc.

9.22 gauss_jackson_state_machine.hh File Reference

Defines the class GaussJacksonStateMachine, which guides the Gauss-Jackson integration process.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include <string>
```

Data Structures

class jeod::GaussJacksonStateMachine

Guides the behavior of the Gauss-Jackson integration process via a finite state machine.

Namespaces

jeod

Namespace jeod.

9.22.1 Detailed Description

Defines the class GaussJacksonStateMachine, which guides the Gauss-Jackson integration process.

Definition in file gauss_jackson_state_machine.hh.

9.23 gauss_jackson_two_state.hh File Reference

Defines the class GaussJacksonTwoState, which contains a pair of double* pointers.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include <cstddef>
```

Data Structures

class jeod::GaussJacksonTwoState
 Essentially just std::pair<double*>.

Namespaces

· jeod

Namespace jeod.

9.23.1 Detailed Description

Defines the class GaussJacksonTwoState, which contains a pair of double* pointers.

Definition in file gauss_jackson_two_state.hh.

9.24 generalized_second_order_ode_technique.cc File Reference

Define class GeneralizedSecondOrderODETechnique methods.

```
#include <cstddef>
#include "er7_utils/integration/core/include/integrator_constructor.hh"
#include "utils/message/include/message_handler.hh"
#include "../include/generalized_second_order_ode_technique.hh"
#include "../include/integration_messages.hh"
```

Namespaces

jeod

Namespace jeod.

9.24.1 Detailed Description

Define class GeneralizedSecondOrderODETechnique methods.

Definition in file generalized_second_order_ode_technique.cc.

9.25 generalized_second_order_ode_technique.hh File Reference

Define the static class GeneralizedSecondOrderODETechnique.

```
#include "er7_utils/integration/core/include/integration_technique.hh"
```

Data Structures

· class jeod::GeneralizedSecondOrderODETechnique

Enumerates the integration schemes, generalized Cartesian or Lie group integration, and provides simple utilities that work with this.

Namespaces

• er7_utils

Namespace er7_utils contains the state integration models used by JEOD.

jeod

Namespace jeod.

9.25.1 Detailed Description

Define the static class GeneralizedSecondOrderODETechnique.

Definition in file generalized second order ode technique.hh.

9.26 integration_messages.cc File Reference

Implement the class IntegrationMessages.

```
#include "../include/integration_messages.hh"
```

Namespaces

· jeod

Namespace jeod.

Macros

- #define PATH "utils/integration/"
- #define CLASS IntegrationMessages
- #define MAKE MESSAGE CODE(id) char const * CLASS::id = PATH #id

9.26.1 Detailed Description

Implement the class IntegrationMessages.

Definition in file integration_messages.cc.

9.27 integration_messages.hh File Reference

Define the class IntegrationMessages, the class that specifies the message IDs used in the integration model.

```
#include "utils/sim_interface/include/jeod_class.hh"
```

Data Structures

· class jeod::IntegrationMessages

Declares messages associated with the integration test model.

Namespaces

jeod

Namespace jeod.

9.27.1 Detailed Description

Define the class IntegrationMessages, the class that specifies the message IDs used in the integration model. Definition in file integration_messages.hh.

9.28 jeod_integration_group.cc File Reference

Define JeodIntegrationGroup methods.

```
#include "../include/jeod_integration_group.hh"
#include "../include/jeod_integration_time.hh"
#include "../include/integration_messages.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "utils/memory/include/jeod_alloc.hh"
#include "utils/message/include/message_handler.hh"
#include "er7_utils/integration/core/include/integrable_object.hh"
#include "er7_utils/integration/core/include/integrator_constructor.hh"
#include <algorithm>
#include <cstddef>
```

Namespaces

jeod

Namespace jeod.

9.28.1 Detailed Description

Define JeodIntegrationGroup methods.

Definition in file jeod_integration_group.cc.

9.29 jeod_integration_group.hh File Reference

Define the extensible class IntegrationGroup, an instance of which is responsible for integrating the states of a set of DynBody objects.

```
#include "time_change_subscriber.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "utils/container/include/pointer_vector.hh"
#include "utils/sim_interface/include/jeod_integrator_interface.hh"
#include "er7_utils/integration/core/include/base_integration_group.hh"
#include "er7_utils/integration/core/include/integrable_object.hh"
#include "er7_utils/integration/core/include/integrator_constructor.hh"
#include "er7_utils/integration/core/include/integrator_result_merger_-container.hh"
#include <cstddef>
```

Data Structures

· class jeod::JeodIntegrationGroupOwner

The abstract class IntegrationGroupOwner contains an IntegrationGroup.

class jeod::JeodIntegrationGroup

A JeodIntegrationGroup integrates the state of a set of objects over time.

Namespaces

jeod

Namespace jeod.

9.29.1 Detailed Description

Define the extensible class IntegrationGroup, an instance of which is responsible for integrating the states of a set of DynBody objects.

Definition in file jeod_integration_group.hh.

9.30 jeod integration time.cc File Reference

Define JeodIntegrationTime methods.

```
#include <algorithm>
#include <cstddef>
#include "utils/memory/include/jeod_alloc.hh"
#include "utils/message/include/message_handler.hh"
#include "../include/integration_messages.hh"
#include "../include/jeod_integration_time.hh"
#include "../include/time_change_subscriber.hh"
```

Namespaces

jeod

Namespace jeod.

9.30.1 Detailed Description

Define JeodIntegrationTime methods.

Definition in file jeod_integration_time.cc.

9.31 jeod_integration_time.hh File Reference

Define the class JeodIntegrationTime.

```
#include "er7_utils/integration/core/include/time_interface.hh"
#include "utils/container/include/pointer_vector.hh"
#include "utils/sim_interface/include/jeod_class.hh"
```

Data Structures

· class jeod::JeodIntegrationTime

The class JeodIntegrationTime adds the concepts of timestamping and notification of changes in the nature of time to the ER7 numerical utilities TimeInterface class.

Namespaces

jeod

Namespace jeod.

9.31.1 Detailed Description

Define the class JeodIntegrationTime.

Definition in file jeod_integration_time.hh.

9.32 Isode control data interface.cc File Reference

Define member functions for the class LsodeControlDataInterface.

```
#include "er7_utils/interface/include/message_handler.hh"
#include "er7_utils/integration/core/include/integration_messages.hh"
#include "er7_utils/interface/include/alloc.hh"
#include "../include/lsode_control_data_interface.hh"
```

9.32.1 Detailed Description

Define member functions for the class LsodeControlDataInterface.

Definition in file lsode_control_data_interface.cc.

9.33 Isode_control_data_interface.hh File Reference

Define the class LsodeControlDataInterface.

```
#include <vector>
#include "utils/sim_interface/include/jeod_class.hh"
```

Data Structures

· class jeod::LsodeControlDataInterface

Specifies controls for an LSODE integrator.

Namespaces

jeod

Namespace jeod.

9.33.1 Detailed Description

Define the class LsodeControlDataInterface.

Definition in file lsode_control_data_interface.hh.

9.34 Isode_data_classes.cc File Reference

Define member functions for the data-grouping classes specified in Isode_data_classes.

```
#include "er7_utils/interface/include/message_handler.hh"
#include "er7_utils/integration/core/include/integration_messages.hh"
#include "er7_utils/interface/include/alloc.hh"
#include "../include/lsode data classes.hh"
```

9.34.1 Detailed Description

Define member functions for the data-grouping classes specified in Isode_data_classes.

Definition in file lsode_data_classes.cc.

9.35 Isode_data_classes.hh File Reference

Define LSODE classes that contain just data members.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "lsode_control_data_interface.hh"
```

Data Structures

class jeod::LsodeDataJacobianPrep

Data associated with the method DPREPJ.

class jeod::LsodeDataArrays

The data arrays.

· class jeod::LsodeDataStode

The data associated with method Dstode.

Namespaces

jeod

Namespace jeod.

9.35.1 Detailed Description

Define LSODE classes that contain just data members.

Definition in file lsode_data_classes.hh.

9.36 Isode_first_order_ode_integrator.hh File Reference

Define the class LsodeFirstOrderODEIntegrator, the Jeod-compatible version of the Livermore ODE solver, LSODE.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/integration/core/include/first_order_ode_integrator.hh"
#include "er7_utils/integration/core/include/integrator_result.hh"
#include "er7_utils/integration/core/include/integration_controls.hh"
#include "lsode_control_data_interface.hh"
#include "lsode_data_classes.hh"
#include "lsode_integration_controls.hh"
```

Data Structures

· class jeod::LsodeFirstOrderODEIntegrator

Jeod-compatible version of the Livermore ODE solver, LSODE.

Namespaces

jeod

Namespace jeod.

9.36.1 Detailed Description

Define the class LsodeFirstOrderODEIntegrator, the Jeod-compatible version of the Livermore ODE solver, LSODE. Definition in file Isode first order ode integrator.hh.

9.37 Isode_first_order_ode_integrator__integrator.cc File Reference

 $\label{lem:lember_problem} \mbox{Define member functions for the class LsodeFirstOrderODEIntegrator.}$

```
#include <math.h>
#include <cmath>

#include "er7_utils/integration/core/include/integration_controls.hh"
#include "utils/math/include/numerical.hh"
#include "../include/lsode_first_order_ode_integrator.hh"
```

9.38.1 Detailed Description

Define member functions for the class LsodeFirstOrderODEIntegrator.

Definition in file Isode first order ode integrator manager.cc.

9.39 Isode_first_order_ode_integrator__support.cc File Reference

Define member functions for the class LsodeFirstOrderODEIntegrator.

```
#include <math.h>
#include <cmath>
#include "er7_utils/interface/include/alloc.hh"
#include "er7_utils/integration/core/include/integ_utils.hh"
#include "er7_utils/interface/include/message_handler.hh"
#include "er7_utils/integration/core/include/integration_messages.hh"
#include "er7_utils/integration/core/include/integration_controls.hh"
#include "utils/math/include/numerical.hh"
#include "../include/lsode_first_order_ode_integrator.hh"
```

9.39.1 Detailed Description

Define member functions for the class LsodeFirstOrderODEIntegrator.

Definition in file Isode_first_order_ode_integrator__support.cc.

9.40 Isode_first_order_ode_integrator__utility.cc File Reference

Define member functions for the class LsodeFirstOrderODEIntegrator.

```
#include <math.h>
#include <cmath>
#include "er7_utils/interface/include/alloc.hh"
#include "er7_utils/integration/core/include/integ_utils.hh"
#include "er7_utils/interface/include/message_handler.hh"
#include "er7_utils/integration/core/include/integration_messages.hh"
#include "er7_utils/integration/core/include/integration_controls.hh"
#include "../include/lsode_first_order_ode_integrator.hh"
```

9.40.1 Detailed Description

Define member functions for the class LsodeFirstOrderODEIntegrator.

Definition in file Isode first order ode integrator utility.cc.

9.41 Isode_generalized_second_order_ode_integrator.cc File Reference

Define member functions for the class LsodeGeneralizedDerivSecondOrderODEIntegrator.

```
#include "er7_utils/interface/include/alloc.hh"
#include "er7_utils/integration/core/include/integ_utils.hh"
#include "er7_utils/interface/include/message_handler.hh"

```

9.45.1 Detailed Description

Define the methods in the class LsodeIntegratorConstructor.

Definition in file Isode_integrator_constructor.cc.

9.46 Isode_integrator_constructor.hh File Reference

Define the class LsodeIntegratorConstructor, the class that constructs the integration controls and the integrators for the LSODE method.

```
#include <vector>
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/integration/core/include/integrator_constructor.hh"
#include "lsode_first_order_ode_integrator.hh"
#include "lsode_second_order_ode_integrator.hh"
#include "lsode_simple_second_order_ode_integrator.hh"
#include "lsode_generalized_second_order_ode_integrator.hh"
#include "lsode_control_data_interface.hh"
```

Data Structures

· class jeod::LsodeIntegratorConstructor

Create state and time integrators that propagate using standard Lsode.

Namespaces

jeod

Namespace jeod.

9.46.1 Detailed Description

Define the class LsodeIntegratorConstructor, the class that constructs the integration controls and the integrators for the LSODE method.

Definition in file Isode_integrator_constructor.hh.

9.47 Isode_second_order_ode_integrator.cc File Reference

Define member functions for the class LsodeSecondOrderODEIntegrator.

```
#include "er7_utils/interface/include/alloc.hh"
#include "er7_utils/integration/core/include/integ_utils.hh"
#include "er7_utils/interface/include/message_handler.hh"
#include "er7_utils/integration/core/include/integration_messages.hh"
#include "er7_utils/integration/core/include/integration_controls.hh"
#include "../include/lsode_control_data_interface.hh"
#include "../include/lsode_second_order_ode_integrator.hh"
```

9.47.1 Detailed Description

Define member functions for the class LsodeSecondOrderODEIntegrator.

Definition in file Isode_second_order_ode_integrator.cc.

9.48 Isode_second_order_ode_integrator.hh File Reference

Define the class LsodeSecondOrderODEIntegrator.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/integration/core/include/second_order_ode_integrator.-
hh"
#include "lsode_first_order_ode_integrator.hh"
#include "lsode_integration_controls.hh"
```

Data Structures

· class jeod::LsodeSecondOrderODEIntegrator

JEOD-compatible version of the Livermore ODE solver, LSODE, capable of integrating second-order ODEs.

Namespaces

jeod

Namespace jeod.

9.48.1 Detailed Description

Define the class LsodeSecondOrderODEIntegrator.

Definition in file lsode_second_order_ode_integrator.hh.

9.49 Isode_simple_second_order_ode_integrator.cc File Reference

 $\label{lem:lember_problem} Define\ member\ functions\ for\ the\ class\ LsodeSimpleSecondOrderODEIntegrator.$

```
#include "er7_utils/interface/include/alloc.hh"
#include "er7_utils/interface/include/message_handler.hh"

#include "../include/lsode_control_data_interface.hh"
#include "../include/lsode_simple_second_order_ode_integrator.hh"
```

9.49.1 Detailed Description

Define member functions for the class LsodeSimpleSecondOrderODEIntegrator.

Definition in file lsode_simple_second_order_ode_integrator.cc.

9.50 Isode_simple_second_order_ode_integrator.hh File Reference

Define the class LsodeSimpleSecondOrderODEIntegrator.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/integration/core/include/second_order_ode_integrator.-
hh"
#include "lsode_second_order_ode_integrator.hh"
```

Data Structures

class jeod::LsodeSimpleSecondOrderODEIntegrator

JEOD-compatible version of the Livermore ODE solver, LSODE, capable of integrating second-order ODEs.

Namespaces

jeod

Namespace jeod.

9.50.1 Detailed Description

Define the class LsodeSimpleSecondOrderODEIntegrator.

Definition in file lsode_simple_second_order_ode_integrator.hh.

9.51 restartable_2d_second_order_integrator.hh File Reference

Defines the class Restartable2DSecondOrderODEIntegrator.

```
#include "restartable_state_integrator_templates.hh"
#include "generalized_second_order_ode_technique.hh"
#include "integration_messages.hh"
#include "utils/container/include/simple_checkpointable.hh"

#include "er7_utils/integration/core/include/second_order_ode_integrator.-
hh"
#include "er7_utils/integration/core/include/left_quaternion_functions.hh"
#include
```

Data Structures

· class jeod::Restartable2DSecondOrderIntegrator

Integrates a second order ODE in two dimensional space, $d^2x/dt^2 = a(x,t)$, where x is a two-vector.

Namespaces

· jeod

Namespace jeod.

9.51.1 Detailed Description

Defines the class Restartable2DSecondOrderODEIntegrator.

Definition in file restartable_2d_second_order_integrator.hh.

9.52 restartable_state_integrator.hh File Reference

Define classes that encapsulate the construction, destruction, checkpointing, and restarting of state integrators.

```
#include "restartable_state_integrator_templates.hh"
#include "generalized_second_order_ode_technique.hh"
#include "integration_messages.hh"
#include "utils/container/include/simple_checkpointable.hh"
#include "utils/message/include/message_handler.hh"
#include "utils/memory/include/jeod_alloc.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "er7_utils/integration/core/include/first_order_ode_integrator.hh"
#include "er7_utils/integration/core/include/second_order_ode_integrator.-hh"
#include "er7_utils/integration/core/include/left_quaternion_functions.hh"
#include "er7_utils/integration/core/include/left_quaternion_functions.hh"
#include <cstddef>
```

Data Structures

class jeod::RestartableScalarFirstOrderODEIntegrator

A RestartableScalarFirstOrderODEIntegrator integrates a first order ODE, dx/dt = v(x,t), where x is a scalar.

class jeod::RestartableT3SecondOrderODEIntegrator

A RestartableT3SecondOrderODEIntegrator integrates a second order ODE in three space, $d^2x/dt^2 = a(x,t)$, where x is a three-vector.

class jeod::RestartableSO3SecondOrderODEIntegrator

A RestartableSO3SecondOrderODEIntegrator integrates a generalized second order ODE that describes rotation in three space.

Namespaces

jeod

Namespace jeod.

9.52.1 Detailed Description

Define classes that encapsulate the construction, destruction, checkpointing, and restarting of state integrators. Definition in file restartable state integrator.hh.

9.53 restartable_state_integrator_templates.hh File Reference

Define template classes that encapsulate the construction, destruction, checkpointing, and restarting of state integrators.

```
#include <cstddef>
#include "er7_utils/integration/core/include/integrator_constructor.hh"
#include "er7_utils/integration/core/include/first_order_ode_integrator.hh"
#include "er7_utils/integration/core/include/second_order_ode_integrator.-
hh"
#include "utils/container/include/simple_checkpointable.hh"
#include "utils/message/include/message_handler.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "integration_messages.hh"
```

Data Structures

- class jeod::RestartableStateIntegrator< IntegratorType >
 - A RestartableStateIntegrator establishes the basic capabilities needed to make a state integrator a managed resource.
- $\bullet \ \ {\it class jeod::} Restartable First Order ODE Integrator < size >$
 - A RestartableFirstOrderODEIntegrator is-a RestartableStateIntegrator that manages an er7_utils::FirstOrderODEIntegrator.
- class jeod::RestartableSecondOrderODEIntegrator
 - A RestartableSecondOrderODEIntegrator is-a RestartableStateIntegrator that manages the integrator for a second order ODE problem.
- $\bullet \ \, {\sf class\ jeod::} Restartable Simple Second Order ODE Integrator < size > \\$
 - A RestartableSimpleSecondOrderODEIntegrator is-a RestartableSecondOrderODEIntegrator that manages the integrator for a simple second order ODE problem, one in which the time derivative of the generalized position is the generalized velocity.
- class jeod::RestartableGeneralizedDerivSecondOrderODEIntegrator< position_size, velocity_size, Deriv-Functions >

A RestartableGeneralizedDerivSecondOrderODEIntegrator is-a RestartableStateIntegrator that manages the integrator for a generalized second order ODE problem, one in which the time derivative of the generalized position is some function of the generalized position and the generalized velocity.

260 File Documentation

 class jeod::RestartableGeneralizedStepSecondOrderODEIntegrator< position_size, velocity_size, Step-Functions >

A RestartableGeneralizedStepSecondOrderODEIntegrator is-a RestartableStateIntegrator that manages the integrator for a generalized second order ODE problem, one in which the time derivative of the generalized position is some function of the generalized position and the generalized velocity.

Namespaces

jeod

Namespace jeod.

9.53.1 Detailed Description

Define template classes that encapsulate the construction, destruction, checkpointing, and restarting of state integrators.

Definition in file restartable_state_integrator_templates.hh.

9.54 time_change_subscriber.hh File Reference

Define the class TimeChangeSubscriber.

```
#include "utils/sim_interface/include/jeod_class.hh"
```

Data Structures

· class jeod::TimeChangeSubscriber

A TimeChangeSubscriber is some object that wants to be notified of changes in the nature of time.

Namespaces

• jeod

Namespace jeod.

9.54.1 Detailed Description

Define the class TimeChangeSubscriber.

Definition in file time_change_subscriber.hh.

9.55 two_d_array.hh File Reference

Defines the template class er7_utils::TwoDArray, which implements an RAII rectangular 2D array.

```
#include "er7_utils/interface/include/er7_class.hh"
#include "er7_utils/interface/include/alloc.hh"
#include <algorithm>
#include <cstddef>
#include <cstring>
#include <limits>
#include <stdexcept>
```

Data Structures

class er7_utils::TwoDArray< T >

RAII template class that implements a rectangular two dimensional array.

class er7_utils::DoubleTwoDArray

2D array, specialized for doubles.

Namespaces

• er7_utils

Namespace er7_utils contains the state integration models used by JEOD.

9.55.1 Detailed Description

Defines the template class er7_utils::TwoDArray, which implements an RAII rectangular 2D array. Definition in file two_d_array.hh.
